

Innovation Process & Lifecycle

A framework for encouraging and facilitating ideas.

What do we mean by Innovation ?

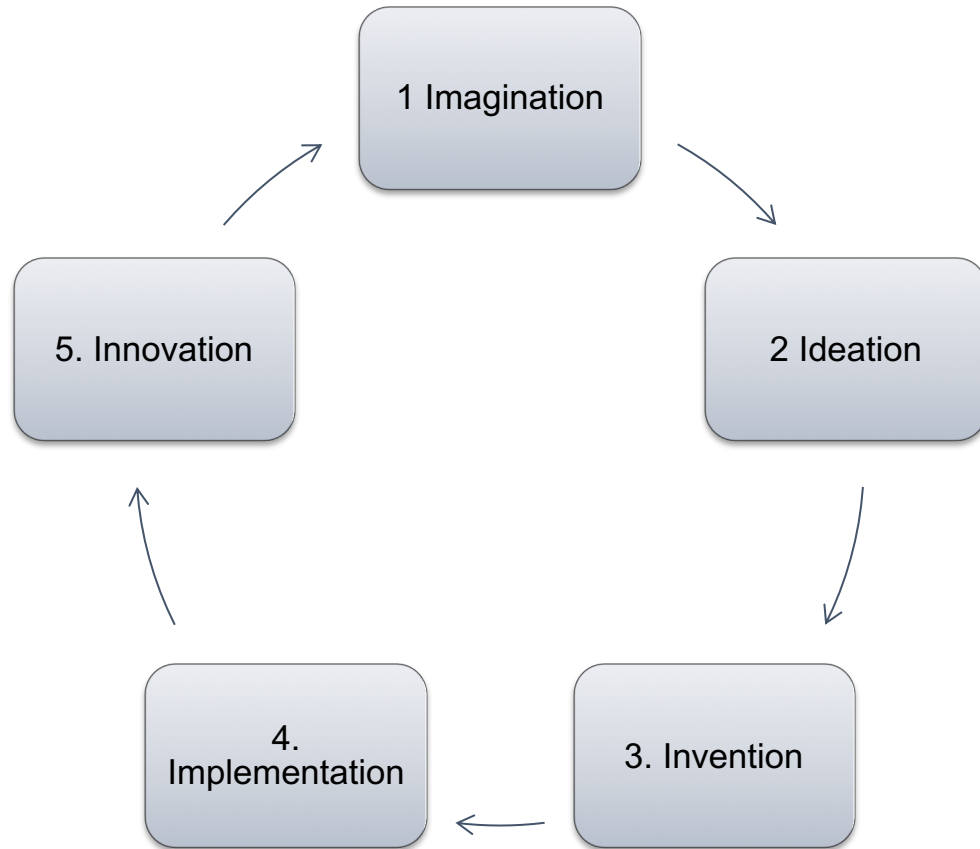

- Innovation can evolve and expand in many areas and may include any idea that can be developed to address one or more desired outcomes for a customer.
- Customers can be internal or external. Having said that, innovation is (typically) referred to as:

“the process of creating and delivering new customer value in the marketplace”

- Ideas can come from any stakeholder (employees, customers, partners, vendors, even nature (via biomimicry)).
- There is an implied lifecycle around innovation that we may want to incorporate into your portfolio planning

Ideas > Invention > Implementation > Innovation

The 5 i's of Innovation

Innovation Lifecycle Phases (5 I's)

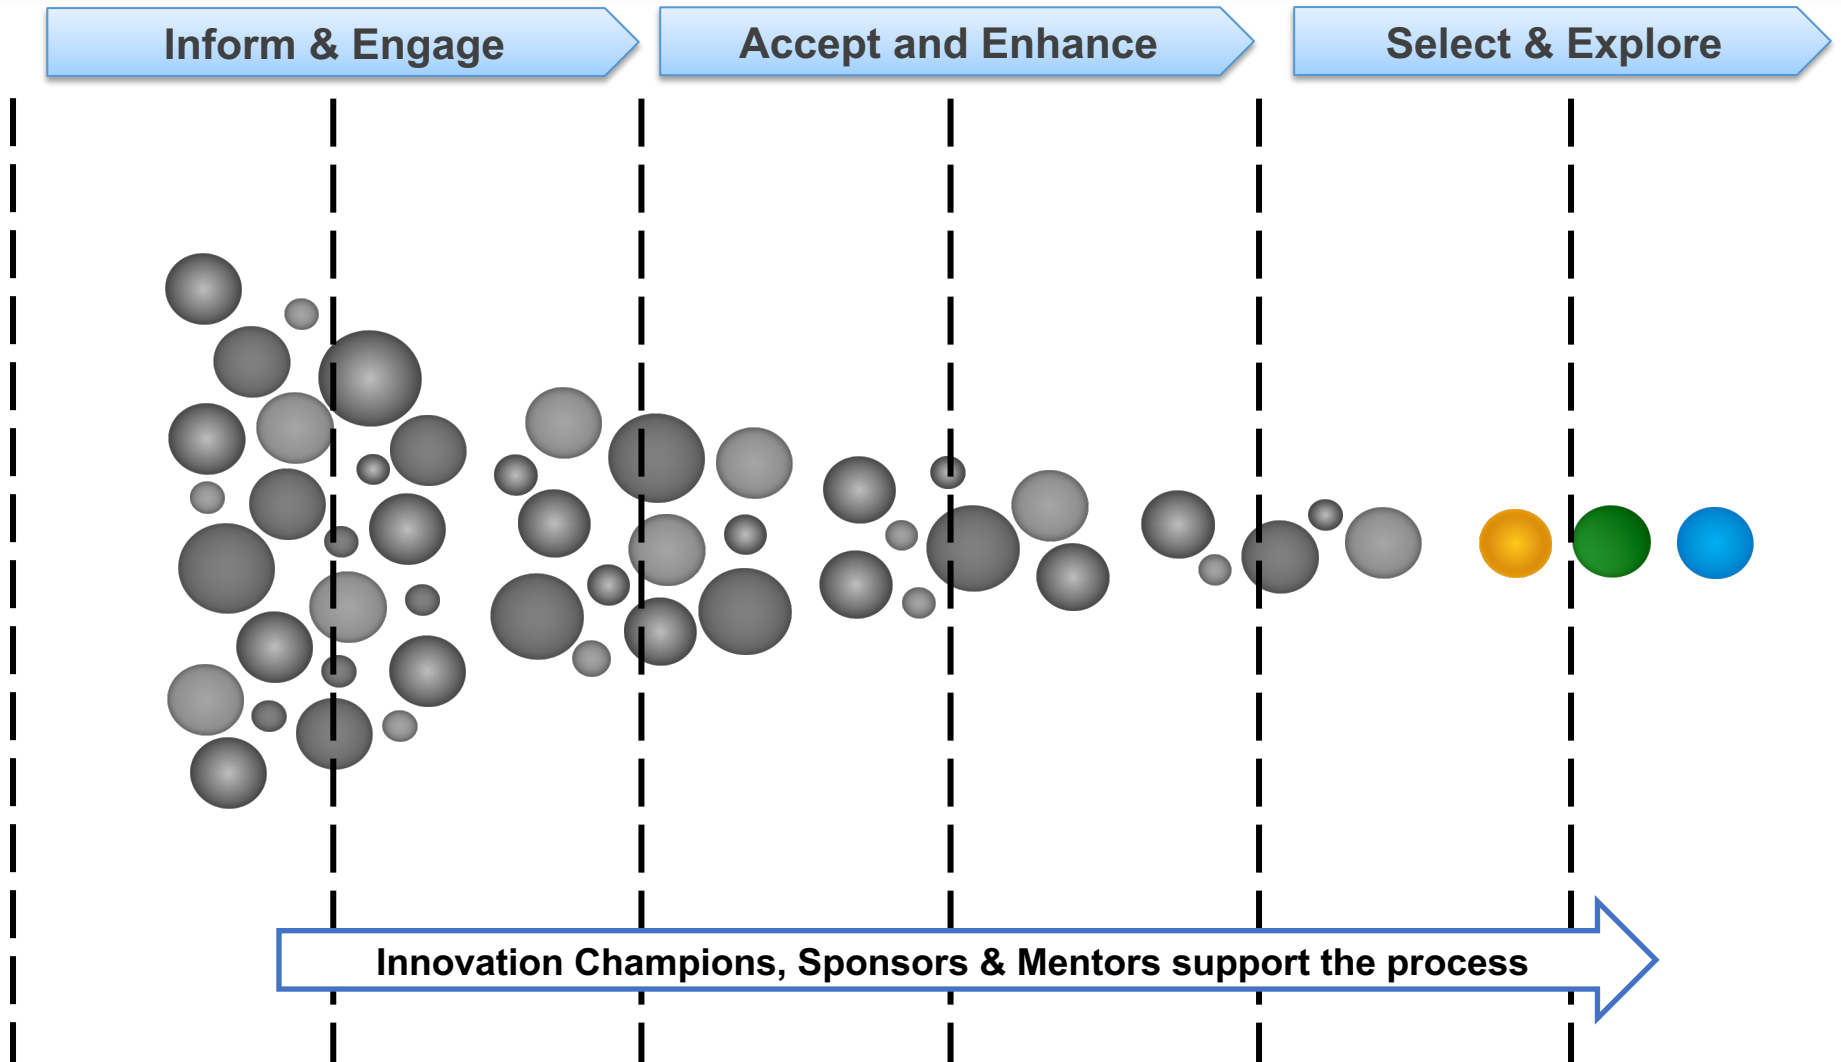

There is an implied lifecycle around innovation that we may want to incorporate into our portfolio planning:

- **Imagination** – conceptualizing a new way of looking at a problem, or thinking of a new way for people to get something done
- **Ideation** – ideas come in all shapes and sizes. What is important is to embrace each idea and provide prompt response to the author for their contribution.
- **Invention** – the idea needs to be developed into a service and/or product (new or extension) that will provide new customer value. For now, we'll refer to this as concept development.
- **Implementation** – once an idea has been developed and vetted (confirmed that it does indeed deliver new value), it then needs to be operationalized via one or more sets of initiatives to improve service delivery (product and/or service extension). Depending on the complexity and impact of an idea, this may require a completely new roadmap of initiatives.
- **Innovation** – once an idea is implemented, the (ROI and ROV – return on value) need to be monetized to complete the cycle. An idea only becomes an innovation when a significant number of customers (% of market) has purchased and consumed a product or service.

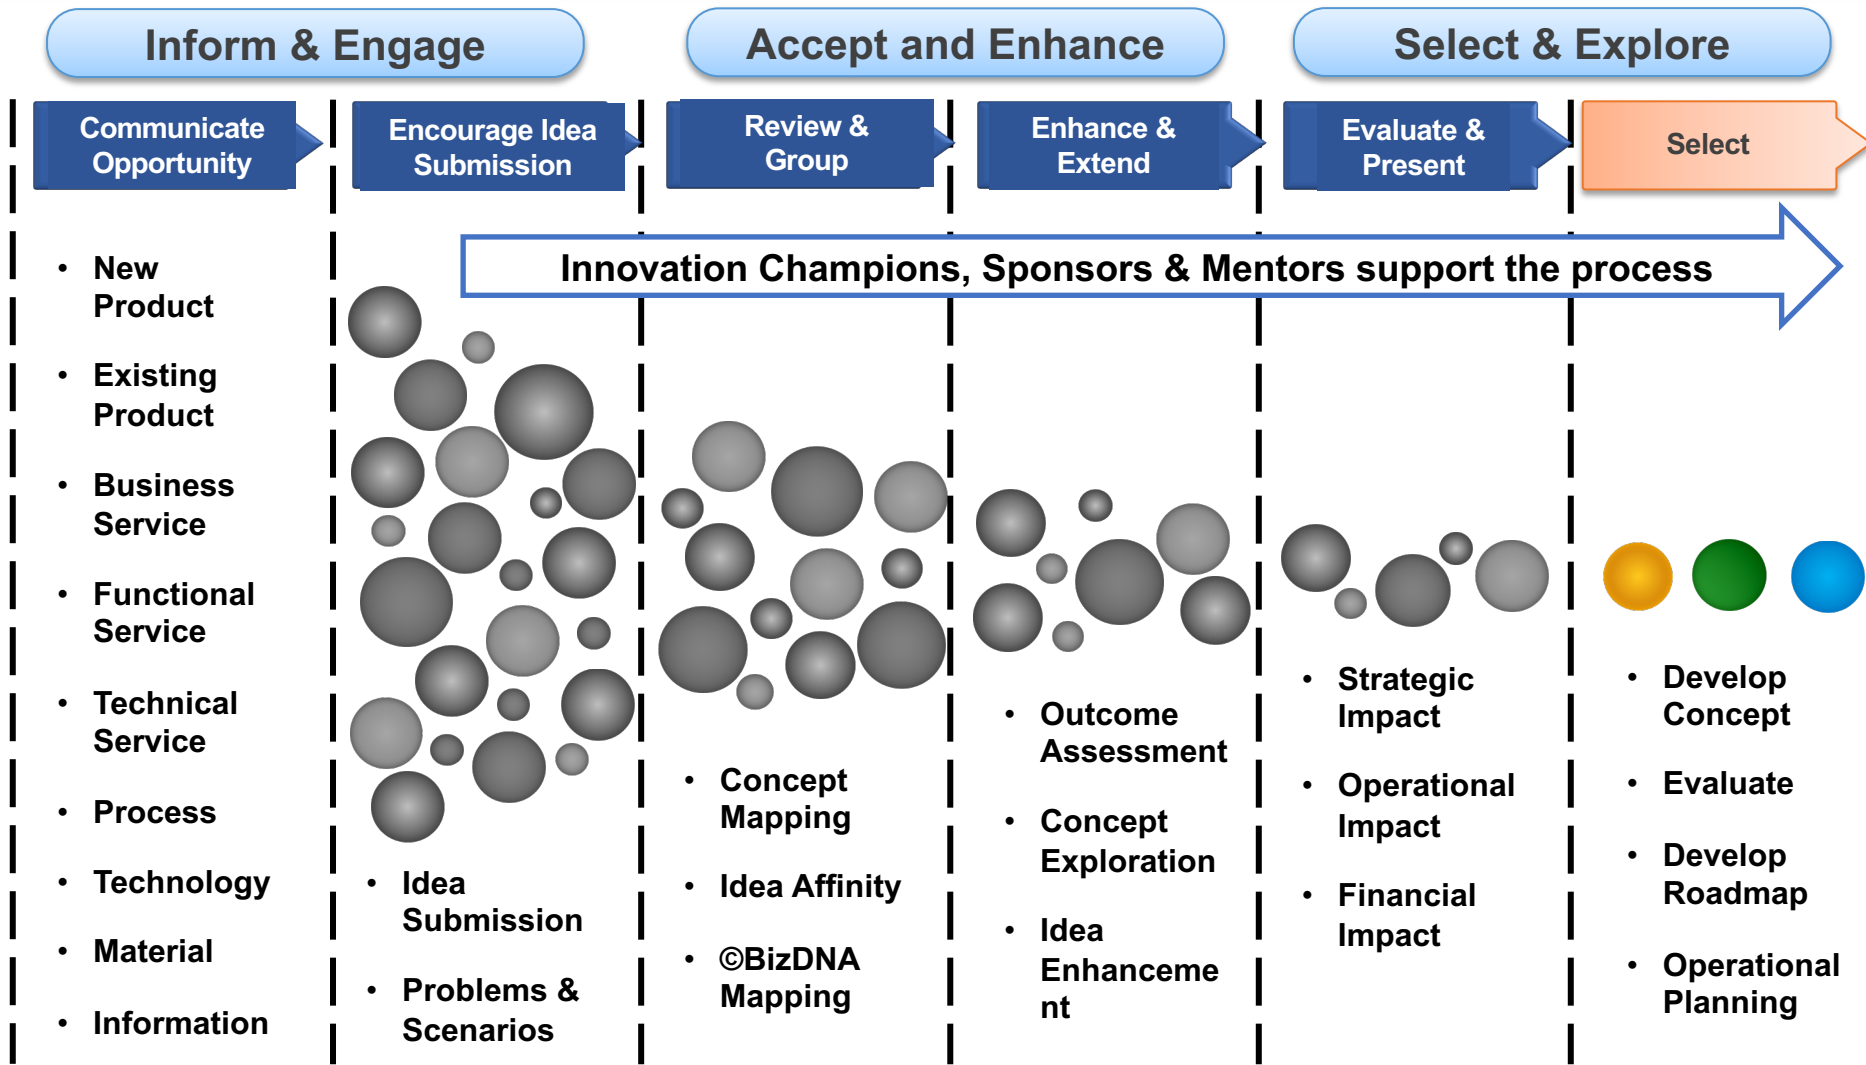

Expanding on Ideation & Invention

- One of the first challenges with Ideation is capturing and warehousing ideas. If we consider ideas as just another “type” of issue, we can include these in the larger “virtual” Demand Repository which provides a way to index, find, and align ideas (where commonality exists).
- Assuming we can establish a Demand Repository (issues, ideas, requests), the next step would involve a way to capture ideas (presumably a simple form).
- Once ideas are captured, we’ll need a way to review, align, evaluate, and (where possible) enhance ideas.
- Once ideas are deemed “ready” for consideration, they can be reviewed and scored like any other initiative where resources can be applied to develop the concept.
- A more elaborate process is outlined in the following slide.

The Innovation Pipeline

Innovation Pipeline (Elaborated)

Ideation Form (draft)

Issue # (assigned by Demand Repository)

Submission Date

Stakeholder ID (if available)

Stakeholder Organization

Stakeholder Name

Stakeholder Type

• - - - Above section is hidden - - - •

Idea Description

Author ID (if different from submitter)

Idea Type

Scenario(s) – provides context for the idea

List of Problems addressed by the idea

Additional notes / comments

Attachment(s)

•List of Idea Types:

- New Product
- Existing Product
- Business Service
- Functional Service
- Technical Service
- Process
- Technology
- Material
- Information

Additional Points & Considerations

- Idea submissions will likely only have a subset of context (scenarios* and problems they are trying to address). A separate effort will need to be made (by business analysts presumably) to fill in missing context.
- Ideas typically don't exist in a vacuum, but it's important to first explore the concept behind an idea (informally or via a discipline like Lateral Thinking – see Edward DeBono's works).
- Where possible ideas may be further enhanced and expanded upon. Affinity analysis around ideas can yield greater impact, so additional attribution may be useful to impart via the alignment with scenarios and problems within the context of an evolving [©BizDNA](#).

*** Note: The term scenario refers to a process “instance”.**

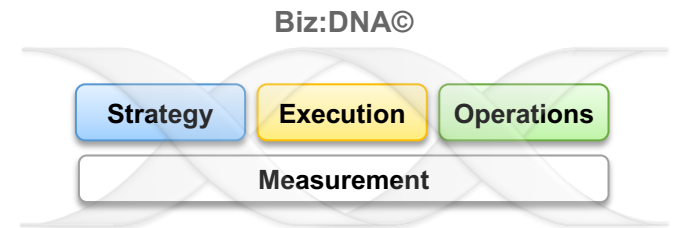

- **Example:** Maintain equipment online (new product build)
- **Example:** Maintain equipment online (product support)

Planning the Next Steps

- Review process & lifecycle with business & IT SMEs
- Discuss Demand Management Repository
- Draft process for issue management (incorporating ideas)
- Identify criteria to promote ideas through the innovation process
 - Some ideas may be simply mapped back to problems and proceed further
 - Other ideas should be run through the innovation process (depends)
- Discuss form for capturing ideas
- Discuss the review and vetting process for ideas (RACI ?)
- Discuss communication & socialization of innovation process
 - Within IT teams
 - Within business community
 - Funding & Budgeting for Concepts

Thank You

Measure what matters
Create and deliver the right value
Build and nurture a winning culture
Proactively manage change & complexity
