Measuring Value

What is value ?

Transactional – financial focus

Intrinsic – customer focus

Customer Experience

BUYING A CAR

BUYING LAUNDRY
DETERGENT

Jobs To Be Done

- Organizations know about their customers, but they focus too much on building customer profiles and looking for correlations in data.
- But, understanding the WHY customers buy products or services requires an understanding of the causal factors that influence the decision to purchase.

Correlation is NOT Causality

Jobs To Be Done

- To create offerings that people truly want to buy, companies need to measure the underlying factors that influence the jobs they are trying to get done
- Some jobs are simple:
 - Brush my teeth
- Some jobs are more complex:
 - Provide treatment for a COVID patient

Understanding the Customer's WHY

- Understanding WHY a customer decides to buy a product or service involves breaking down the job into smaller pieces:
- There are 2 paths of decomposition for any job to be studied:
 - Functional Jobs (does it help me get my job done?)
 - Emotional Jobs (how does it make me feel when I'm doing the job?)

Measuring Value

FUNCTIONAL JOBS

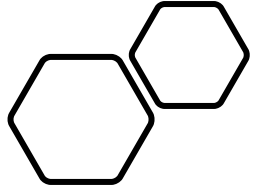

EMOTIONAL JOBS

Desired Outcomes

Measuring the Value Gap

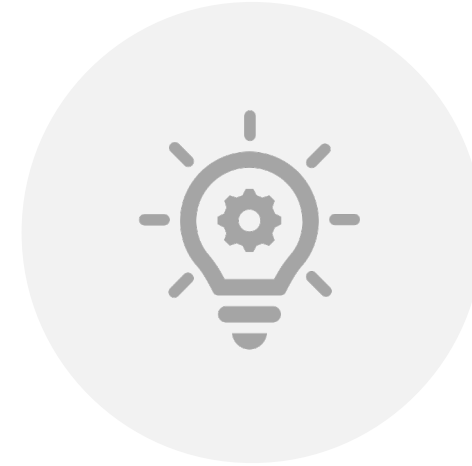

- Products & Services should be designed to address the Desired Outcomes for each job that a customer is trying to perform.
- Okay, this sounds simple. But, think about the number of jobs a customer is trying to perform with an automobile. Then, it gets a bit more complicated.
- When product or services do not satisfy one or more Desired Outcomes for a customer, we refer to these as Value Gaps.

Value Gaps = Opportunities

If you want to drive innovation, the first place to start is by measuring the value gaps between your products & services for each job the customer is trying to get done.

This will provide you with a rich pipeline of interaction and success with customers for driving innovation, rather than reacting to the competition.
