

Do Frameworks Really Matter?

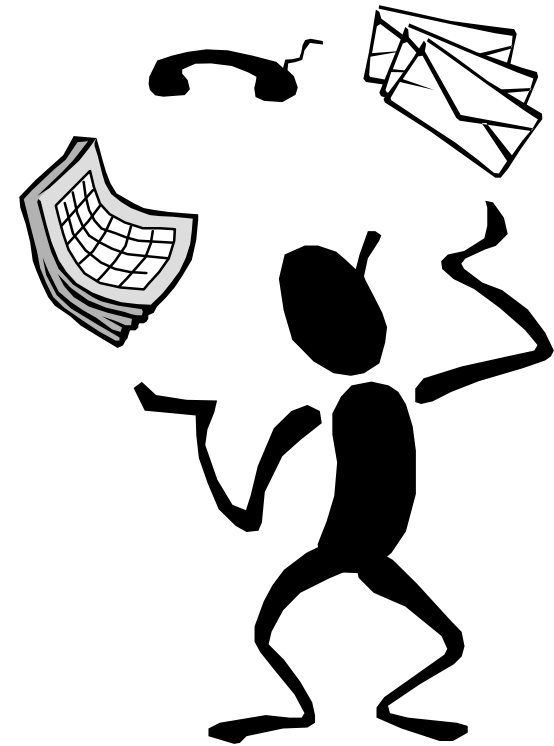

Tim Westbrook
Managing Director
twestbrook@eadirections.com

March 2009

- **Clarifying the meaning of Framework: Taxonomies, Models, Methodologies, Process?**
- **Is a framework really necessary?**
- **Strengths and weaknesses of major EA frameworks
Zachman and TOGAF**
- **Considerations when choosing a framework for your EA program**

Why Should I Care?

- **Confusion → Clarity**
- **You can waste a lot of time**
- **Which one?**
- **Why?**

What is a Framework?

Taxonomy

Methodology

Process

Model

- Dictionary: n. 1) *A structure for supporting or enclosing something else, especially a skeletal support used as the basis for something being constructed; 2) a simplified description of a complex entity or process (syn.: model)*
- EA Context: **A model or outline that provides the logical structure for EA analysis and within which EA deliverables will be created and related to each other**
- Intent of EA Framework: **Provide a simplified context for the scope and structure of an enterprise and its components**
- Examples: **Zachman Framework for Enterprise Architecture, TOGAF, DODAF, MODAF, FEAF**

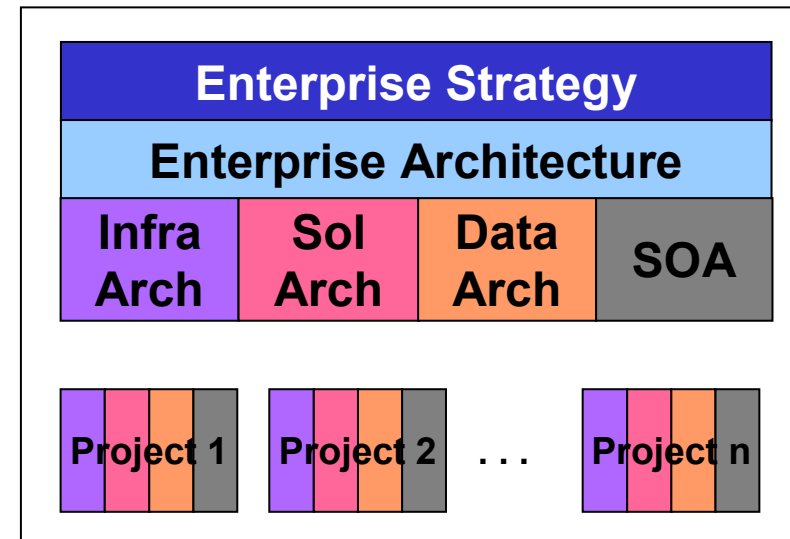

1. **An enterprise is a very complex entity.**
2. **EA needs to present a simplified version of that complexity for analysis, communication and deliverables**
3. **Frameworks help to organize the huge number of complex entities and relationships that make up an enterprise.**
4. **Highlights all the areas to consider for the scope of your EA.**
5. **Why repeat work that has already been done?**

- **Process, Process, Process**
 - Process before Framework before Tool
- **You must think thoroughly through all aspects of your EA for your Enterprise – Do not let frameworks do this!**
- **Your Goals & Objectives must drive WHAT you do and WHAT you model – not a framework**
 - “Just enough architecture, just in time”
- **Enterprise Architecture is still more of an art than a science, and demands creativity**
- **There are aspects of an “Enterprise” that a framework cannot capture**

- **Everyone should know:**
 - Zachman
 - TOGAF
- **May want to consider:**
 - FEA Reference Models
 - DODAF/MODAF
 - NASCIO
 - E2AF
 - PeaF
- **Others that may have something to offer:**
 - CIMOSA/PERA/GERAM
 - EIF
 - SAGA

**ENTERPRISE Architecture is
Architecture for the ENTERPRISE**

- **EA often mistaken for/positioned as:**
 - Business Architecture
 - Information Architecture
 - Systems Architecture
 - Solutions Architecture
 - Technical / Infrastructure Architecture
 - SOA
 - ??? Architecture
- **EA is a separate and distinct discipline that is higher-level, more strategic, and longer-term focused, but still integrated with other architecture disciplines**

- **Our perspective: EA must be driven by the overarching business strategy of the ‘Enterprise’**
 - Reflective of the desired operating model*
 - Take a holistic view
 - Identifying and enabling requirements for business capabilities that are enterprise-wide in scope (often not clearly articulated by the business)
 - Make decisions that are optimal for the enterprise not a specific project or LOB

- **Consequently, EA efforts must emphasize an ‘E’-view**
 - The scope of EA is THE ENTERPRISE
 - “Solidify the Abstract” and “Simplify the Complex”
 - Gaining stakeholder support
 - EA team structure and participants
 - Governance
 - Communication

- **EA must demonstrate clear & unambiguous enterprise-wide linkages; and, as appropriate, explicit decomposition**
 - Enterprise Business Strategy to EA & Project Portfolio Management
 - Business Architecture to Information Architecture to Application Architecture to Technology Architecture

* Enterprise Architecture as Strategy: Creating a Foundation for Business Execution by Peter Weill, David C. Robertson and Jeanne W. Ross

'E' Business Capabilities

- Corporate agility
- Growth by acquisition
- Maximize earnings
- Accelerate time-to-market
- Innovation leadership
- *Etc.*

'E' Business Capabilities

- Corporate agility
- Growth by acquisition
- Maximize earnings
- Accelerate time-to-market
- Innovation leadership
- *Etc.*

'E' Technology Initiatives

- SOA
- Virtualization
- Horizontal scaling
- Open Source
- Agile development
- LAMP
- 'Zero'-downtime
- Real-time integration
- Transaction data management
- Knowledge Mgmt
- *Etc.*

‘E’ Business Capabilities

- Corporate agility
- Growth by acquisition
- Maximize earnings
- Accelerate time-to-market
- Innovation leadership
- *Etc.*

‘E’ Tradeoffs & ‘E’ Governance

- LOB has tight project deadline but SOA has been endorsed and would delay delivery
- Consulting firm bid was fixed price but isn't adhering to standards
- Two separate project teams have selected different ESBs (or some other base technology) but no standard has been set
- *Etc.*

‘E’ Technology Initiatives

- SOA
- Virtualization
- Horizontal scaling
- Open Source
- Agile development
- LAMP
- ‘Zero’-downtime
- Real-time integration
- Transaction data management
- Knowledge Mgmt
- *Etc.*

‘E’ Business Capabilities

- Corporate agility
- Growth by acquisition
- Maximize earnings
- Accelerate time-to-market

- LAMP
- ‘Zero’-downtime
- Real-time integration
- Transaction data management
- Enterprise Content Mgmt
- *Etc.*

A large, thick, black double-headed arrow pointing left and right, spanning the width of the three boxes above it.

What is the role of EA in these areas?

- 1. Analyzing and presenting an 'Enterprise View'**
- 2. Linking EA to Enterprise Business Strategy**
- 3. Optimizing for the Enterprise not the Project**
- 4. Addressing Culture, Politics & Leadership**
- 5. EA Team Structure & Participants ('E'-level)**
- 6. Approval of EA strategies and artifacts**
- 7. Communicating 'E' deliverables to leadership**
- 8. 'E' requirements of a federated business model**
- 9. Sequencing and prioritizing EA tasks**
- 10. Proactive & holistic planning**

Zachman Framework²™ – The EA Perspective

INTERROGATIVE PERSPECTIVES →	<i>What</i>	<i>How</i>	<i>Where</i>	<i>Who</i>	<i>When</i>	<i>Why</i>	TARGET CONTRIBUTORS ↓
SCOPE	INVENTORY IDENTIFICATION	PROCESS IDENTIFICATION	NETWORK IDENTIFICATION	ORGANIZATION IDENTIFICATION	TIMING IDENTIFICATION	MOTIVATION IDENTIFICATION	STRATEGISTS
BUSINESS	INVENTORY DEFINITION	PROCESS DEFINITION	NETWORK DEFINITION	ORGANIZATION DEFINITION	TIMING DEFINITION	MOTIVATION DEFINITION	EXECUTIVE LEADERS
SYSTEM	INVENTORY REPRESENTATION	PROCESS REPRESENTATION	NETWORK REPRESENTATION	ORGANIZATION REPRESENTATION	TIMING REPRESENTATION	MOTIVATION REPRESENTATION	ARCHITECTS
TECHNOLOGIES	INVENTORY SPECIFICATION	PROCESS SPECIFICATION	NETWORK SPECIFICATION	ORGANIZATION SPECIFICATION	TIMING SPECIFICATION	MOTIVATION SPECIFICATION	ENGINEERS
COMPONENT	INVENTORY CONFIGURATION	PROCESS CONFIGURATION	NETWORK CONFIGURATION	ORGANIZATION CONFIGURATION	TIMING CONFIGURATION	MOTIVATION CONFIGURATION	TECHNICIANS
OPERATIONS	INVENTORY INSTANTIATION	PROCESS INSTANTIATION	NETWORK INSTANTIATION	ORGANIZATION INSTANTIATION	TIMING INSTANTIATION	MOTIVATION INSTANTIATION	WORKERS
AUDIENCE PERSPECTIVES ↑	INVENTORY	PROCESS	NETWORK	ORGANIZATION	TIMING	MOTIVATION	TARGET DOMAINS ←

- **Strengths:**
 - John Zachman
 - Separates the levels of abstraction
 - Many practitioners
 - Easily mappable to EA methods' and other processes' models
 - Tools support
- **Weaknesses:**
 - **Perception** that the Framework prescribes the process
 - Can lead an EA practitioner to focus on current state and near term to the detriment of the To-Be, Future State, Target EA
 - Single-cell models – primitive models vs. composite models
- **Neutral:**
 - No one has ever completed the Framework for their enterprise

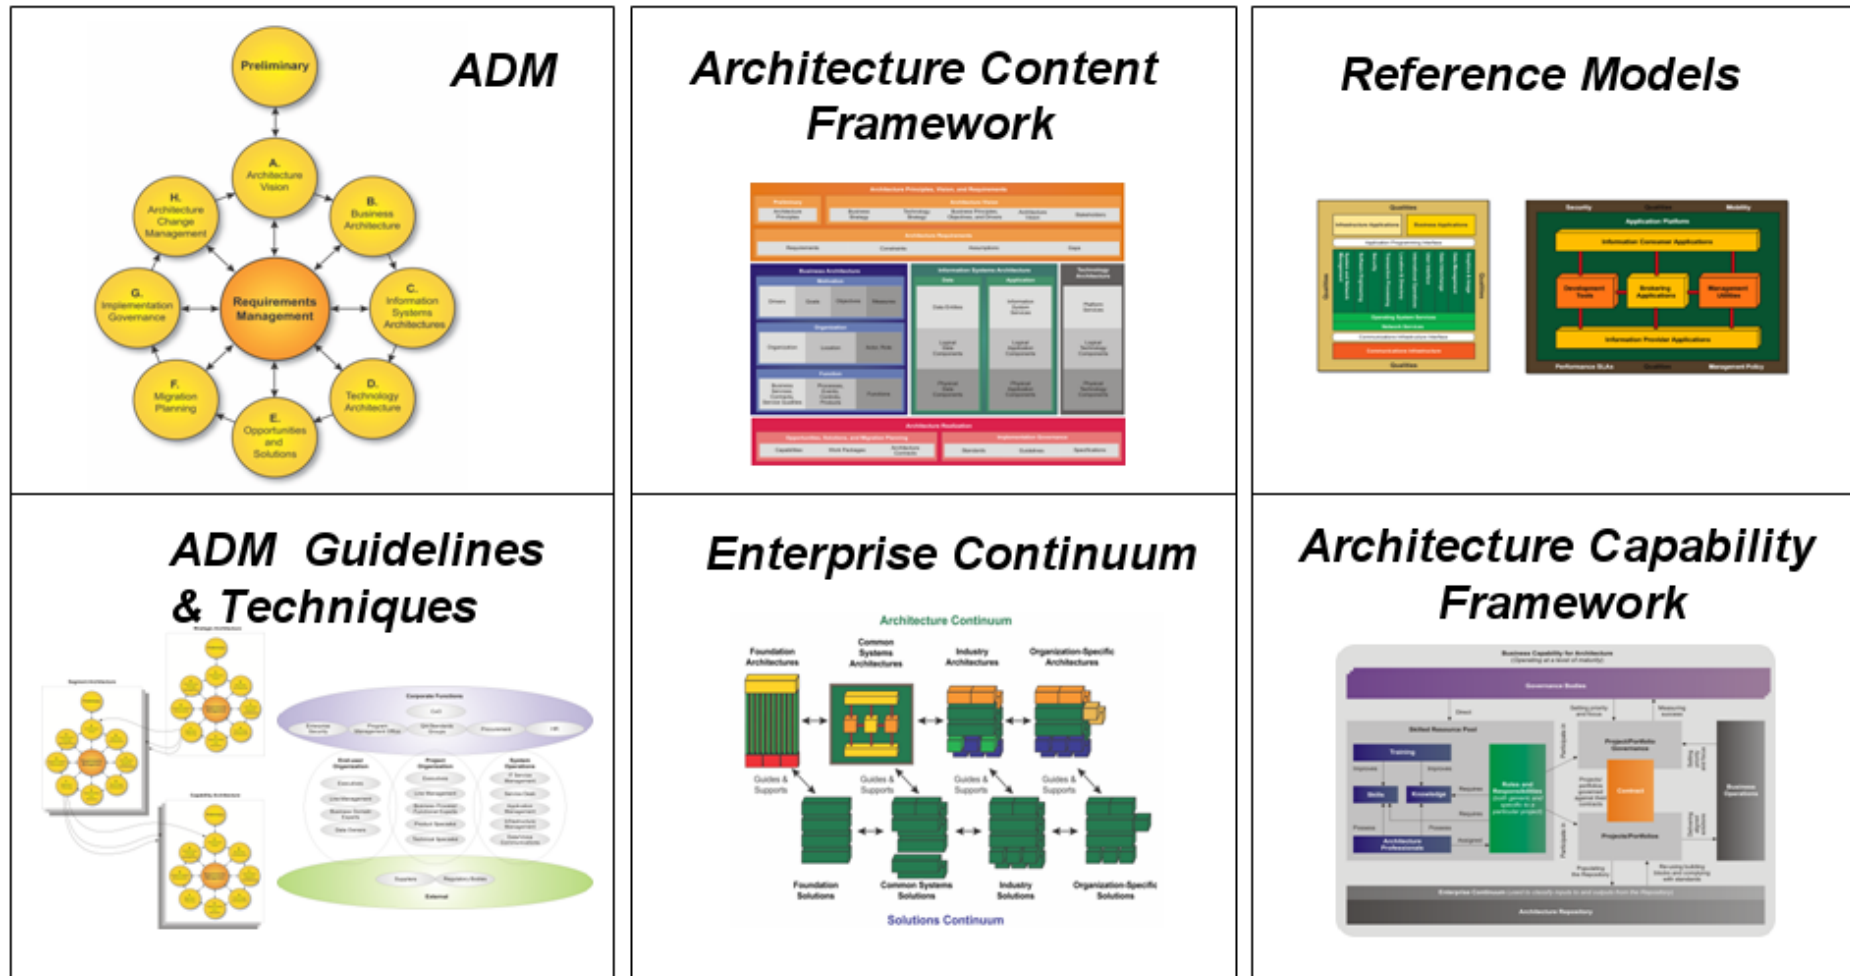

Zachman Scorecard: 10 'E' Requirements

	<i>ENTERPRISE SCORES</i>			
1. Analyzing and presenting an 'Enterprise View'				
2. Linking EA to overall Business Strategy				
3. Optimizing for the Enterprise not the Project				
4. Addressing Culture, Politics & Leadership				N/A
5. EA Team Structure & Participants ('E'-level)				N/A
6. Approval of EA strategies and artifacts				N/A
7. Communicating 'E' deliverables to leadership				
8. 'E' requirements of a federated business model				
9. Sequencing and prioritizing EA tasks				
10. Proactive & holistic planning				

Resources

 - Register to access an interactive view of the framework and dive into each cell for more detail about what goes into the cell
 - Listings of Framework-influenced seminars, briefings and publications
 - Order Zachman e-materials
 - Zachman Book
 - List of standards categorized within the Framework

Framework 2: TOGAF

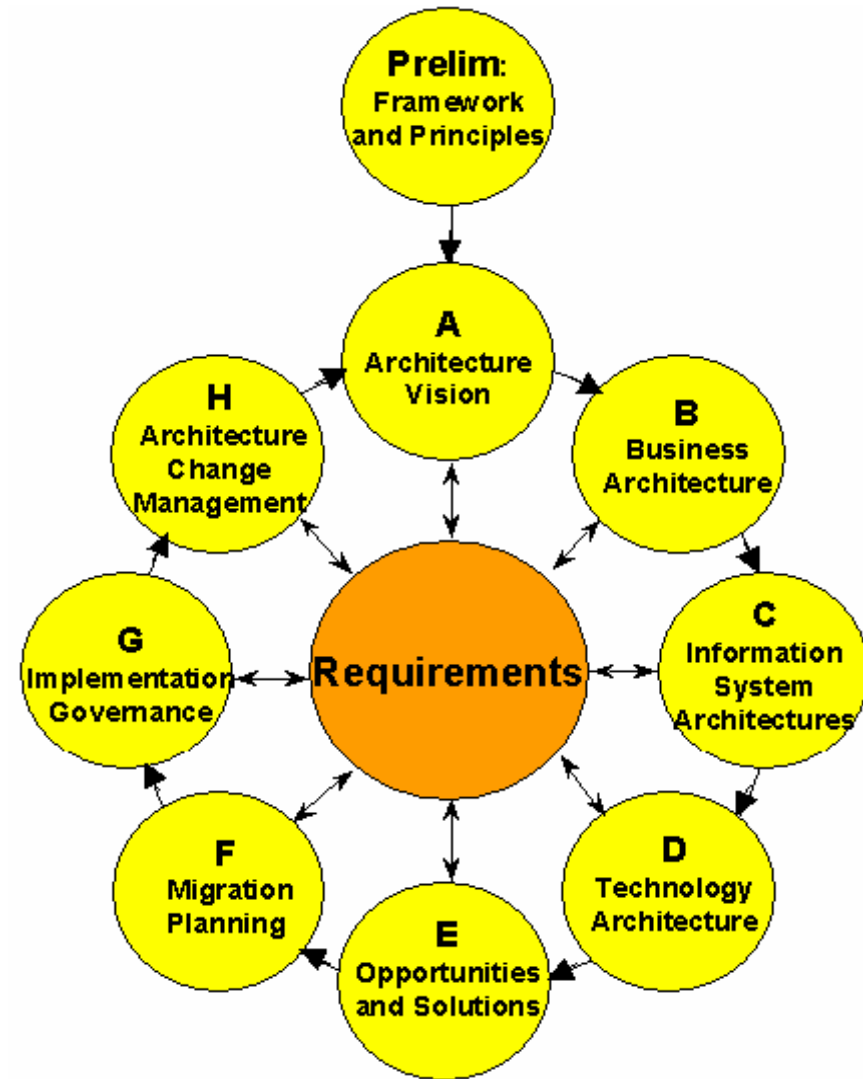

Is TOGAF more than a framework?

- **Modular structure**
 - Promotes greater usability & encourages incremental adoption
 - Supports evolutionary release management
- **Architecture Content framework – not an Enterprise Framework**
- **Extended guidance on using TOGAF**
- **Explicit consideration of architectural styles**
 - SOA and Security
- **Further detail added to the Architecture Development Method (ADM)**
- **Capability Framework**

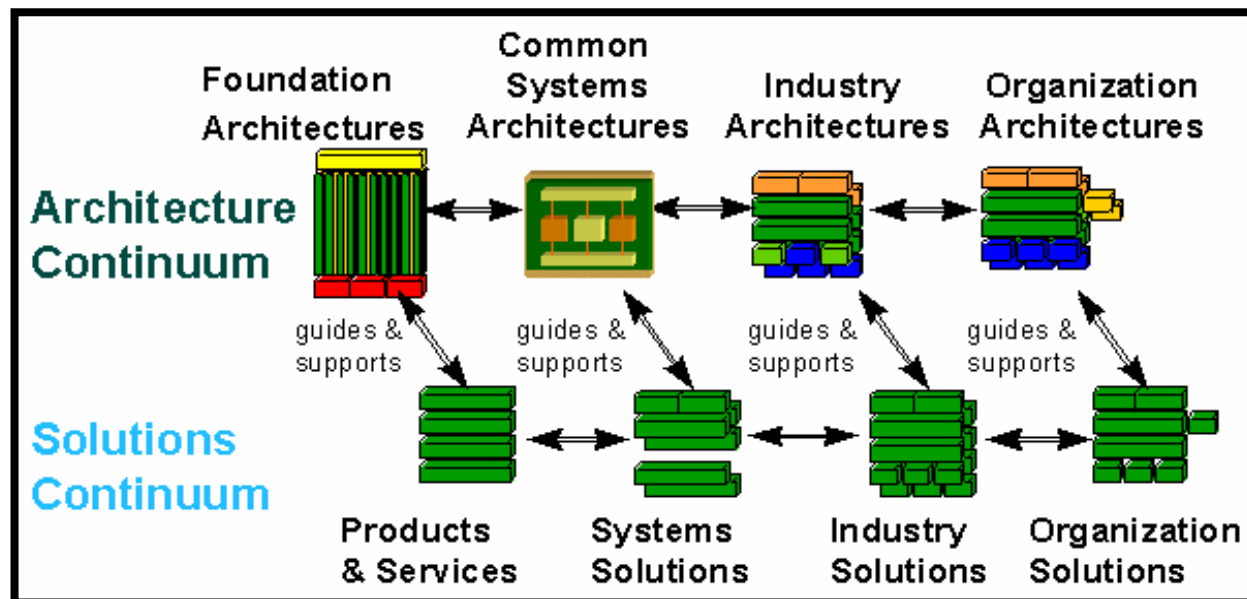

- **Architecture Development Method**

- Documented step-by-step approach to developing an enterprise architecture
- References the other components where applicable throughout the method
- Detailed descriptions of inputs and outputs
- Business requirements driven
- Includes business, system (application and data) and technology architecture phases

- **Enterprise Continuum**

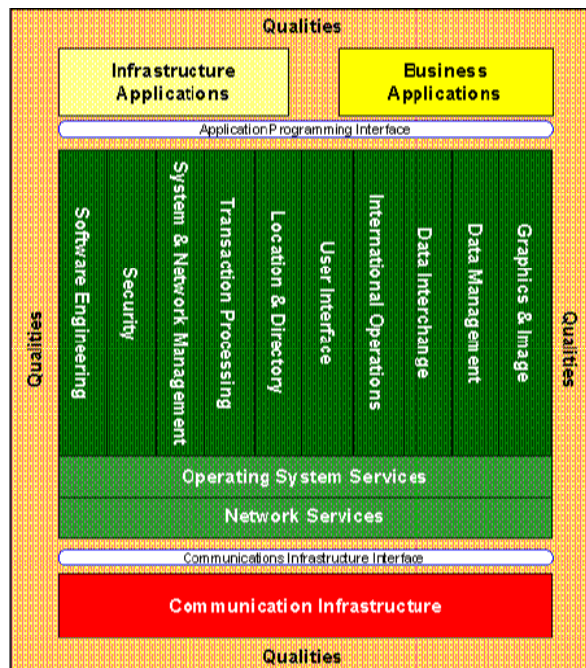

- Relates different types of frameworks (generic, specific domains, industry specific) to the Overall Organization-specific EA of a given enterprise
- Aligns Planning (architecture) with Implementation (Solutions) levels of Enterprise Architecture
- Aligns a type of framework with the types of solutions they represent

Framework 2: TOGAF Components

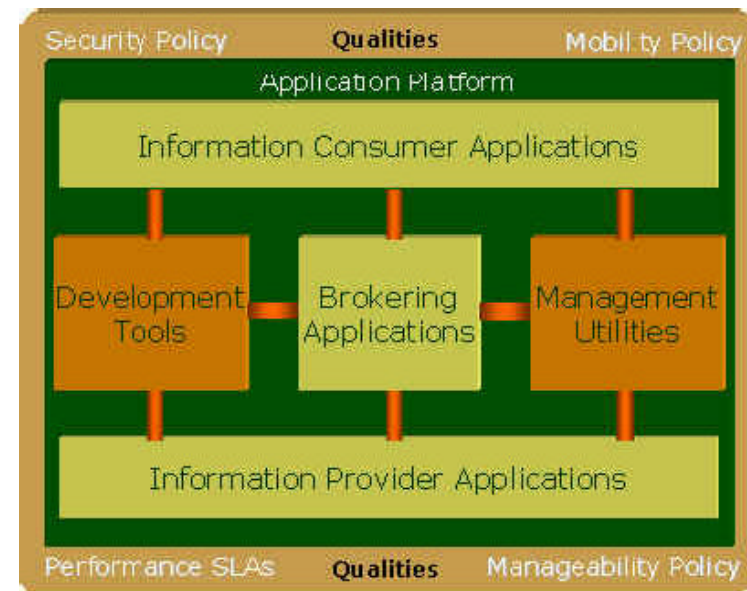

- **Technical Reference Model**

- A taxonomical representation of the infrastructure components required to provide the necessary IT capabilities to applications
- Primary design principles of portability and interoperability
- Taxonomy/organization design point for the Standards Information Base

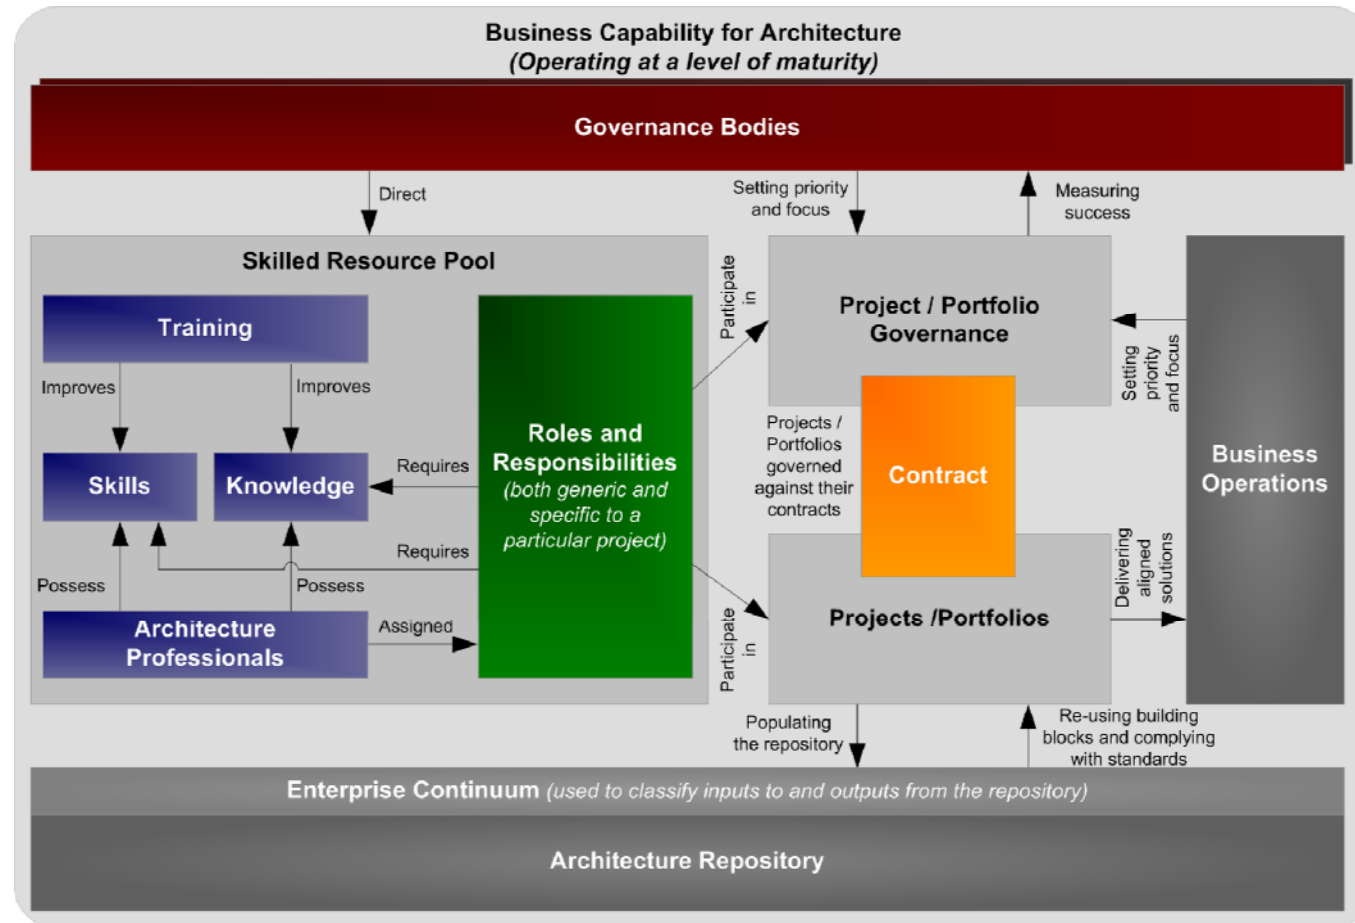

- **Integrated Information Infrastructure Reference Model**

- An expansion of the Infrastructure Applications and Business Applications areas of the TRM
- Supports the notion of “Boundaryless information flow”
- Least mature component of the current version of TOGAF

Capability Framework

- **Standards Information Base**
 - a database of facts and guidance about information systems standards. The standards to which it refers come from many sources: from formal standards bodies such as ISO or IEEE; from authoritative standards makers such as the Internet Society; and from other consortia, like the World Wide Web Consortium and the Object Management Group.
- **TOGAF Resource Base**
 - A variety of other guidance from The Open Group, including:
 - Architecture Governance Framework
 - Case studies
 - Mapping to the Zachman Framework
 - Discussion of other EA approaches
 - Architecture Principles
 - Building Business Scenarios
 - Sampling of EA Goals and Objectives

- **Strengths:**
 - Lots of Detail
 - Adaptable to use with other frameworks, approaches
 - Future-oriented, practical on current state
 - VERY Comprehensive for both EA processes and models
 - Training for TOGAF Certification
- **Weaknesses:**
 - There is no 'E' in TOGAF
 - See webinar material for "Putting the 'E' in TOGAF" on our website
 - Lots of Detail
 - Can lead startup efforts into too much too soon
 - NOT "just enough architecture, just in time"

TOGAF 8.1 Scorecard: 10 'E' Requirements

	<i>ENTERPRISE SCORES</i>		
1. Analyzing and presenting an 'Enterprise View'			
2. Linking EA to overall Business Strategy			
3. Optimizing for the Enterprise not the Project			
4. Addressing Culture, Politics & Leadership			
5. EA Team Structure & Participants ('E'-level)			
6. Approval of EA strategies and artifacts			
7. Communicating 'E' deliverables to leadership			
8. 'E' requirements of a federated business model			
9. Sequencing and prioritizing EA tasks			
10. Proactive & holistic planning			

*TOGAF 9 has not yet been evaluated and scored by EA directions.

- What are you trying to accomplish?
- What industry are you in?
- Are you federal or state government?
- What level of competency do your EA resources have?
- What is the scope of your EA effort?
- Which framework(s) resonate(s) in your organization?

10 Steps to extend frameworks for EA

1. **Put processes/resources/artifacts in place to extend your framework to effectively address enterprise requirements**
2. **Position and execute EA as an ongoing 'process' not a 'project'**
 - Must be proactive and constantly evaluating business and IT strategy
3. **Position EA as manifestation of an enterprise's mission, and the IT strategy that enables that mission**
4. **Deliver artifacts that clearly link enterprise business strategy to EA and IT strategy**
 - Decomposition should be self-evident
5. **Build simple but powerful enterprise-level models that are easily consumed by executive leadership**
 - Make them self-describing with a high pass-along quotient
6. **Engage the corporate strategic planning function**
7. **Emphasize reducing complexity in business processes and IT**
8. **Establish strong EA governance with an enterprise perspective**
9. **Strong linkages to Project Portfolio Management**
10. **Develop an Enterprise Information Architecture that is linked to both an Enterprise Business Architecture and Enterprise Solutions Architecture**

Do Frameworks Really Matter?

COMPETENCY

COST

VALUE

COMPLEXITY

If you keep the purpose of a framework within your EA process in perspective, a Framework can be very valuable!

Our Mission

EAdirections is focused on improving the effectiveness of enterprise architecture (EA) teams by creating deep, mentoring relationships driven by independent research.

- **Founded by Larry R. DeBoever, George S. Paras, Tim Westbrook**
 - 50 years of combined experience in Enterprise Architecture
 - Launched the Enterprise Architecture Strategies (EAS) service at the META Group in 1996
 - Launched the EAC with Shared Insights (formerly DCI) in 1997
- **Key offerings:**
 - Coaching Relationship: 12 month EA advisory subscription with dedicated mentor
 - Teaming Relationship: 12 month subscription with dedicated mentor & significant on-site support
 - Rapid EA Assessments, Education, Briefings, and Workshops
- **Common client problems**
 - Need to 'jump start' or 're-start' EA effort; prioritize efforts; address resource/time constraints
 - Need to build executive or other internal support; gain credibility; improve artifacts or QA
 - Demonstrate (need for) alignment between business strategy, IT strategy, and Projects

Thought Leaders. Mentors. Deep Relationships.
