

A proven approach to protecting intellectual property

Comprehensive protection for Seeker companies and Solver scientists

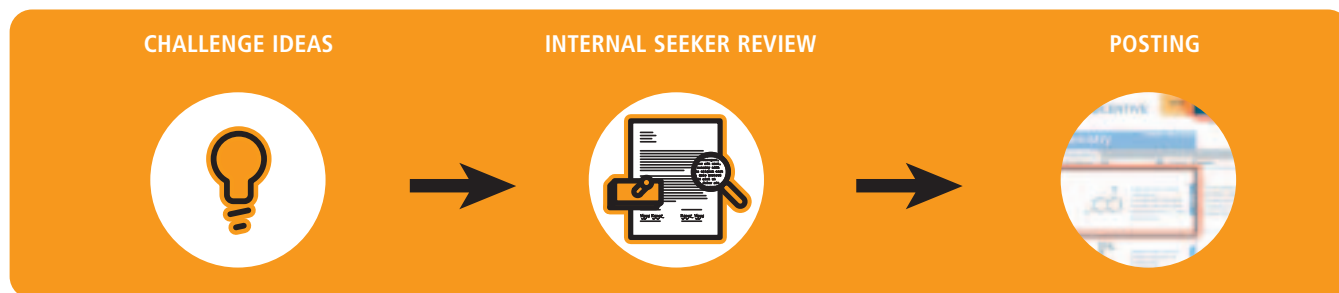

As part of its mission to transform the scale and productivity of scientific research, InnoCentive is dedicated to helping scientists and organizations worldwide to collaborate successfully and securely. The InnoCentive approach to online security and intellectual property rights (IPR) protection has met the stringent requirements of leading companies, academic institutions, and scientists around the world. InnoCentive facilitates the entire process of problem formulation, information access, submission, and award—incorporating proven IPR safeguards for both Seeker organizations and Solver scientists.

InnoCentive incorporates IPR safeguards throughout the entire process.

1. CHALLENGE FORMULATION

Protecting anonymity and confidentiality

The InnoCentive process begins with the formulation of each InnoCentive Challenge.™ InnoCentive works only with trusted companies that have established IPR positions. Seeker scientists and the InnoCentive Scientific Operations Group collaborate to formulate Challenges that provide appropriate information while preserving Seeker anonymity. Internal Seeker review for legal, scientific, and commercial compliance is followed by final scientific review before the Challenge is posted online.

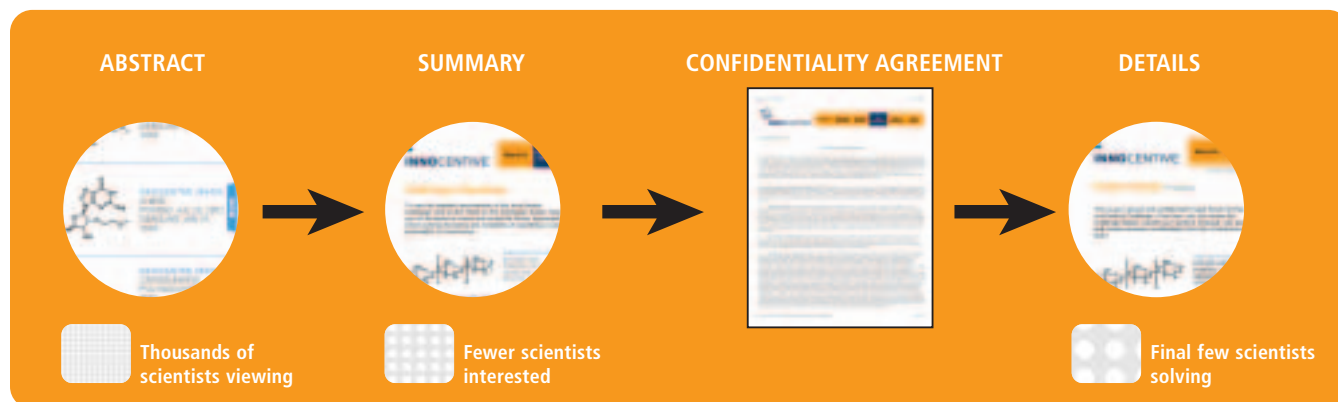

InnoCentive works with Seekers to develop Challenge descriptions that comply with legal, scientific, and commercial interests.

“Working with InnoCentive offers research companies and scientists a comprehensive, well thought-out approach to intellectual property protection.”

— **Douglas Norman**, General Patent Counsel, Eli Lilly and Company

2. INFORMATION ACCESS

Details gated by binding agreements and online security

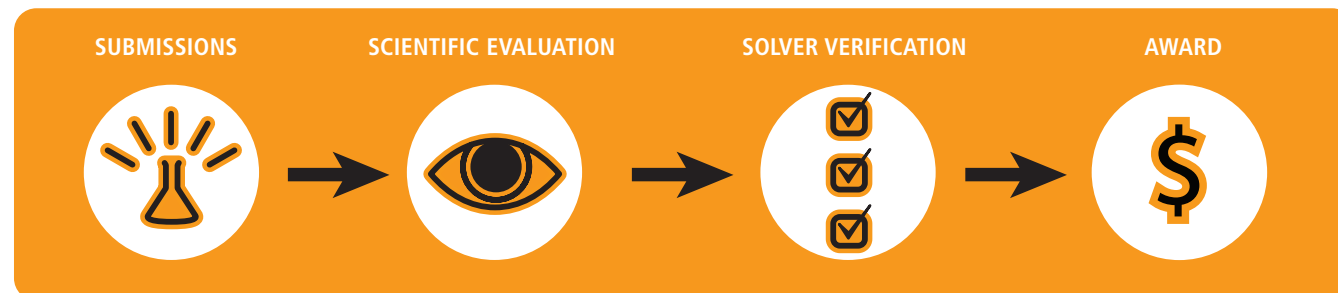

InnoCentive controls access to valuable information belonging to Seekers and Solvers by using binding agreements and private Project Rooms. While brief Challenge abstracts can be viewed by the global scientific community, only registered InnoCentive Solvers can view Challenge summaries containing more specific, non-confidential information. At this point, Solvers qualified to work on a Challenge must sign a binding confidentiality agreement before accessing full project details. Private online Project Rooms for each Solver and each Challenge allow individual Solvers and InnoCentive to communicate confidentially and securely.

InnoCentive controls access to sensitive information via confidentiality agreements and private online Project Rooms.

3. SUBMISSION AND AWARD

Facilitated evaluation, verification, and IPR transfer

Solvers submit Challenge solutions directly to InnoCentive via secure Project Rooms only. InnoCentive facilitates an auditable evaluation process, including initial vetting by the Scientific Operations Group, validation by the Seeker organization, and final selection of winning submissions. When appropriate, InnoCentive verifies Solver authority for transferring rights, gathers any necessary employer waivers, and collects hard-copy contract signatures. Upon final award, InnoCentive administers payment. Awardees transfer IPR to Seeker companies, while all other scientists retain their rights.

InnoCentive facilitates the submission and award process to ensure fairness and successful award and IPR transfer.
