

Roadmap to Success with Enterprise Architecture

K V Ramesh

My experiences from both sides of the table
(1981-96 as IT Professional; Then as Business Manager)

Prepared for presentation at:

The Open Group Conference
Chicago

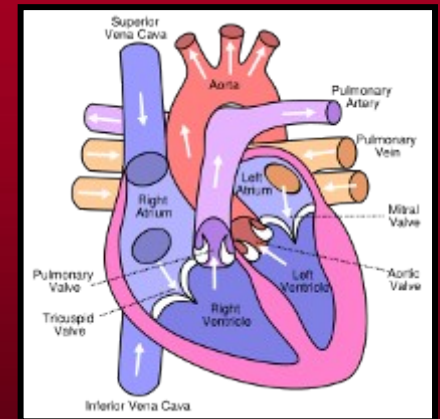

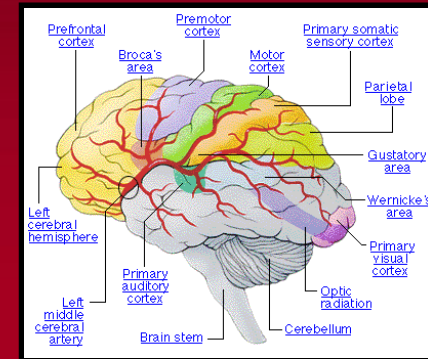

July 21-23, 2008
InterContinental Chicago, Chicago, IL, USA
The Open Group Member Meetings, July 21-25

THE *Open* GROUP
Making standards work[®]

The Purpose

- Corporations worldwide need Speed & Agility to stay on top of competition
- This requires implementation-independent understanding of the inner workings of the enterprise
- The Enterprise Architecture is expected to be a living (adaptive) & guiding (improvement) model reflecting the enterprise-workings

The Case for Action

Technology

Mass Market Acceptance has
been faster than Business
Acceptance
creating (extending) the gap
in expectations on the level of
service

The Case for Action

Technology

Mass Market Acceptance has been faster than Business Acceptance
creating (extending) the gap in expectations on the level of service

Speed & Agility to enable
Volume & Variety (growth drivers)

The Case for Action

Technology

Mass Market Acceptance has been faster than Business Acceptance

creating (extending) the gap in expectations on the level of service

Speed & Agility to enable

Volume & Variety (growth drivers)

MADness

Increasing need for Consolidation & Value Focus through Mergers/Acquisitions/Divestitures

The Case for Action

Technology

Mass Market Acceptance has been faster than Business Acceptance

creating (extending) the gap in expectations on the level of service

Speed & Agility to enable

Volume & Variety (growth drivers)

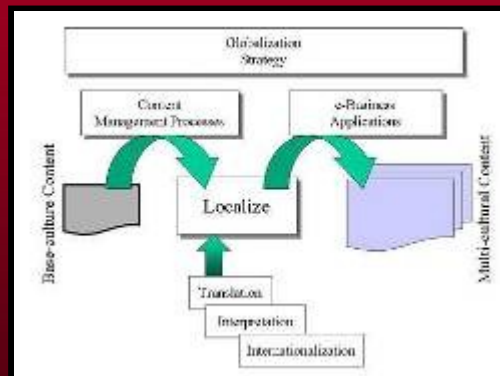

MADness

Increasing need for Consolidation & Value Focus through Mergers/Acquisitions/Divestitures

Globalization

Integration of Culture/ Language/ Diversity/ Mobility on a Common Business & Technology Platform

The Case for Action

Technology

Mass Market Acceptance has been faster than Business Acceptance

creating (extending) the gap in expectations on the level of service

Speed & Agility to enable

Volume & Variety (growth drivers)

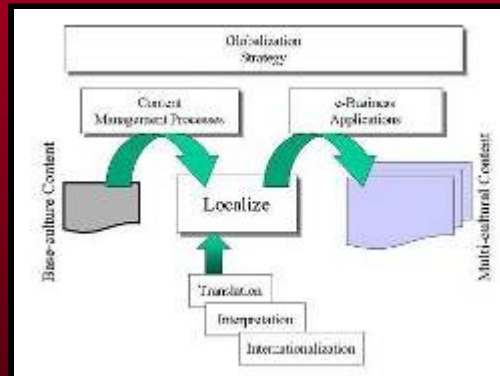

MADness

Increasing need for Consolidation & Value Focus through Mergers/Acquisitions/Divestitures

Globalization

Integration of Culture/ Language/ Diversity/ Mobility on a Common Business & Technology Platform

Extended Enterprise

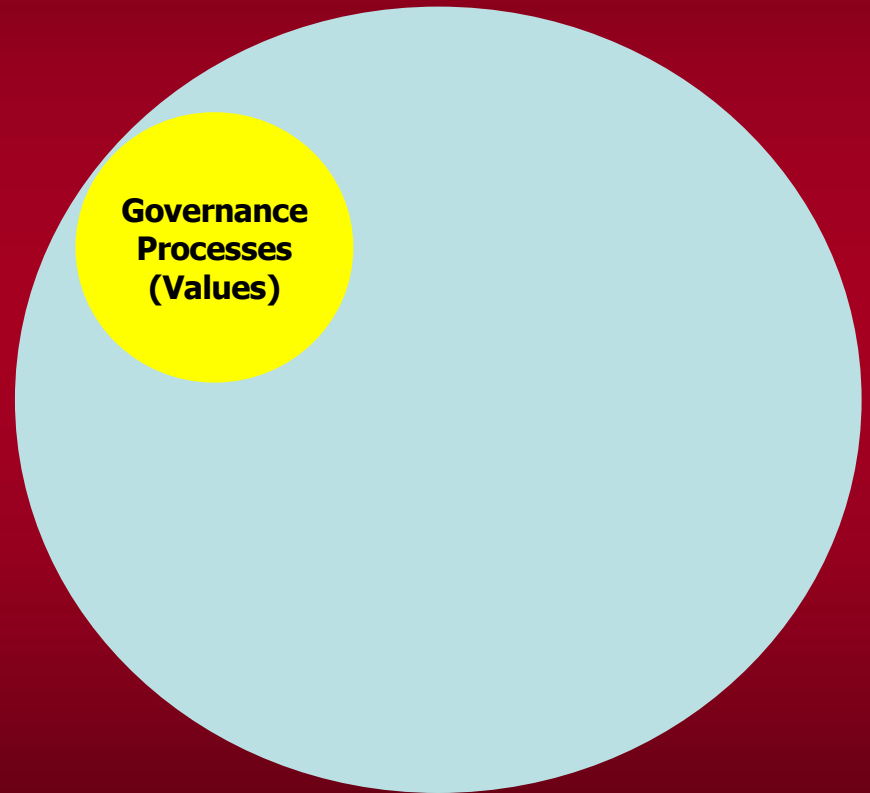

Seamless Integration/Access across enterprises with security and authorization

SOA and EDA – In this context

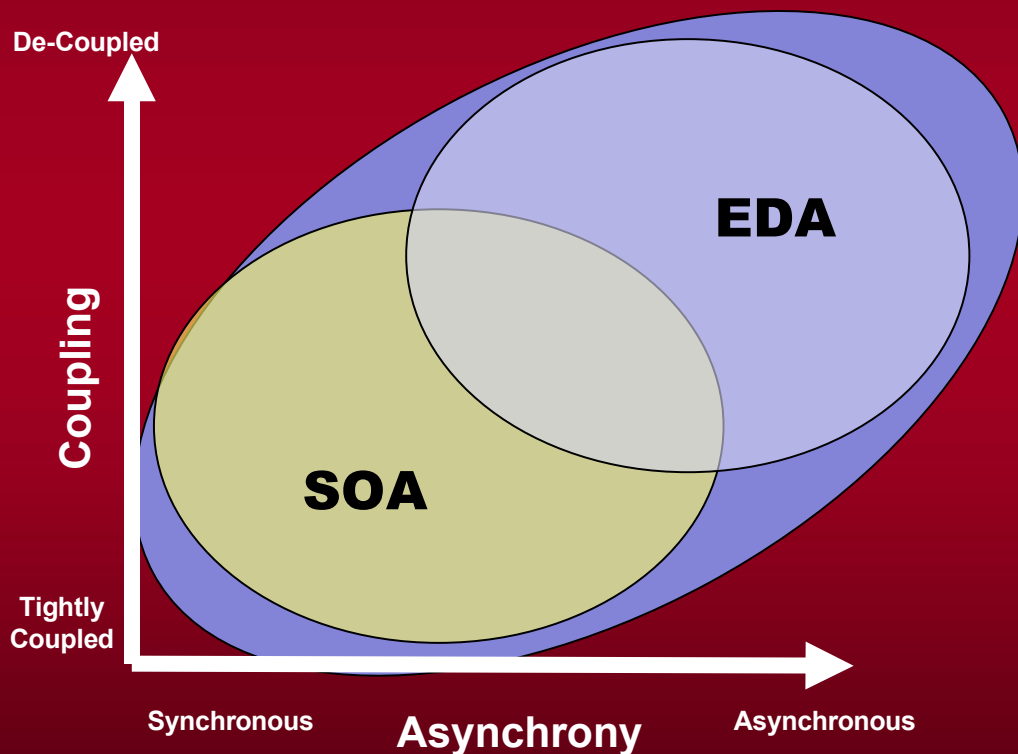

SOA and EDA – In this context

SOA supports assembly of distributed applications from loosely coupled services.

- Modular loosely coupled services
- Mostly synchronous
- One-to-one request/reply

SOA and EDA – In this context

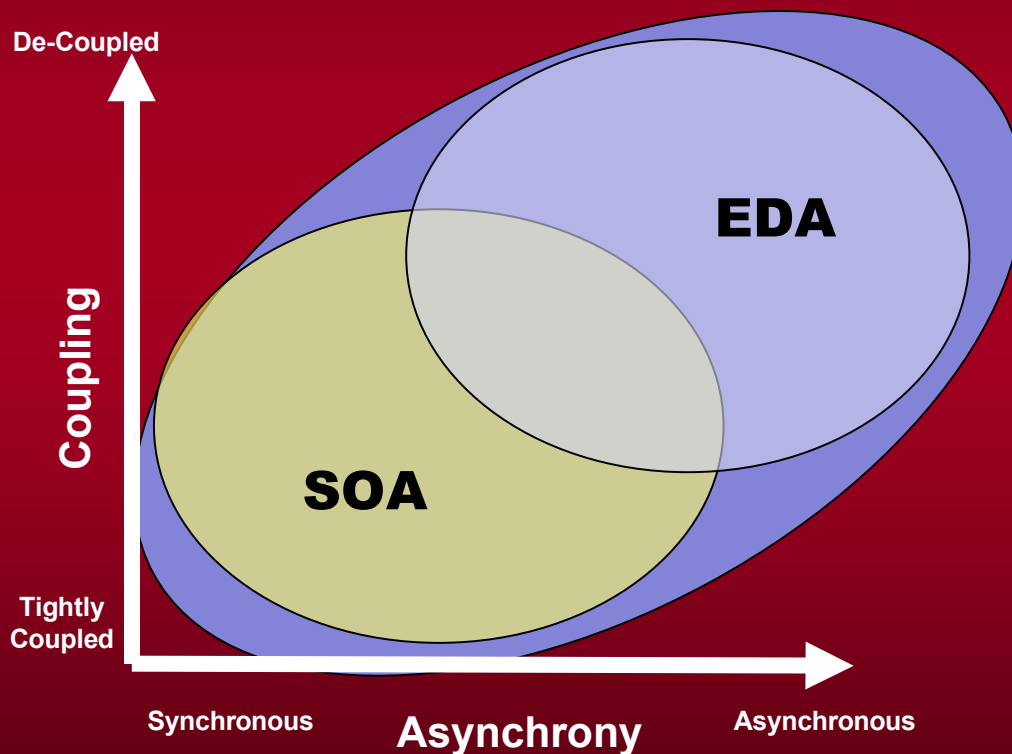

SOA supports assembly of distributed applications from loosely coupled services.

- Modular loosely coupled services
- Mostly synchronous
- One-to-one request/reply

EDA supports processing of events, messages, and triggers in real-time.

- Mostly asynchronous
- Totally decoupled

SOA and EDA – In this context

SOA supports assembly of distributed applications from loosely coupled services.

- Modular loosely coupled services
- Mostly synchronous
- One-to-one request/reply

EDA supports processing of events, messages, and triggers in real-time.

- Mostly asynchronous
- Totally decoupled

Real-Time EA enables:

- User initiated activities
- Event initiated activities
- Service initiated activities

The Approach

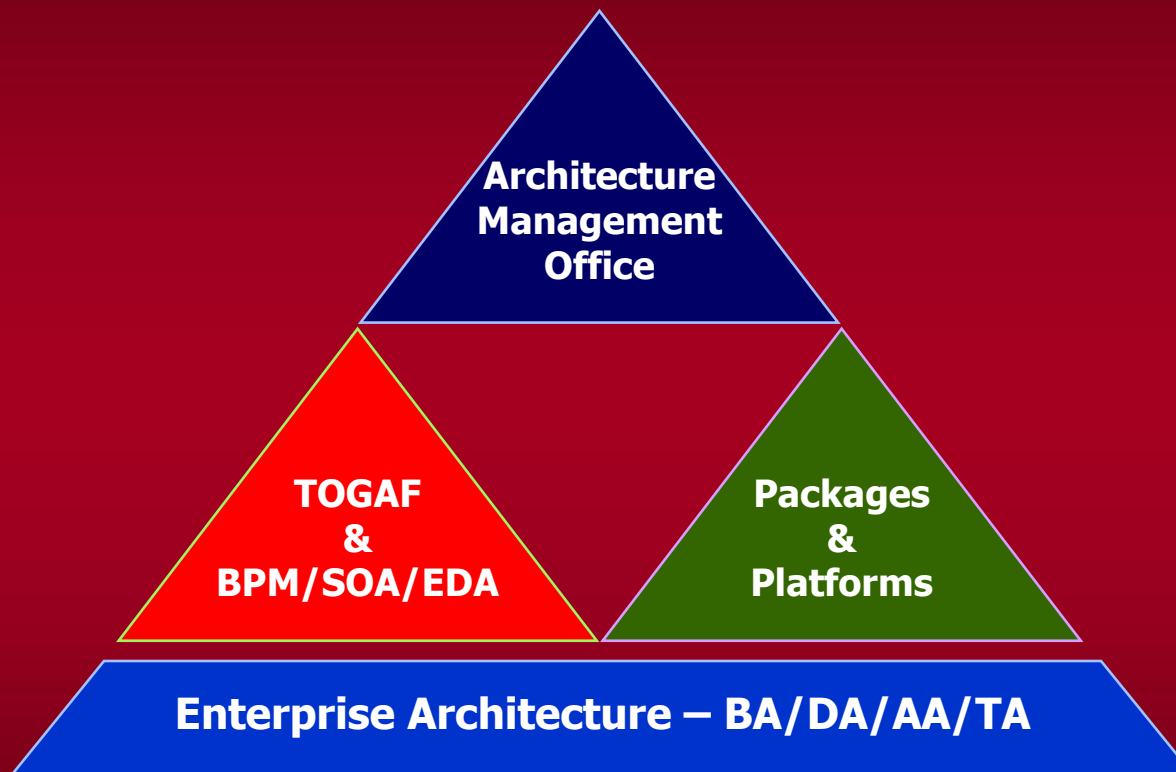

The Approach

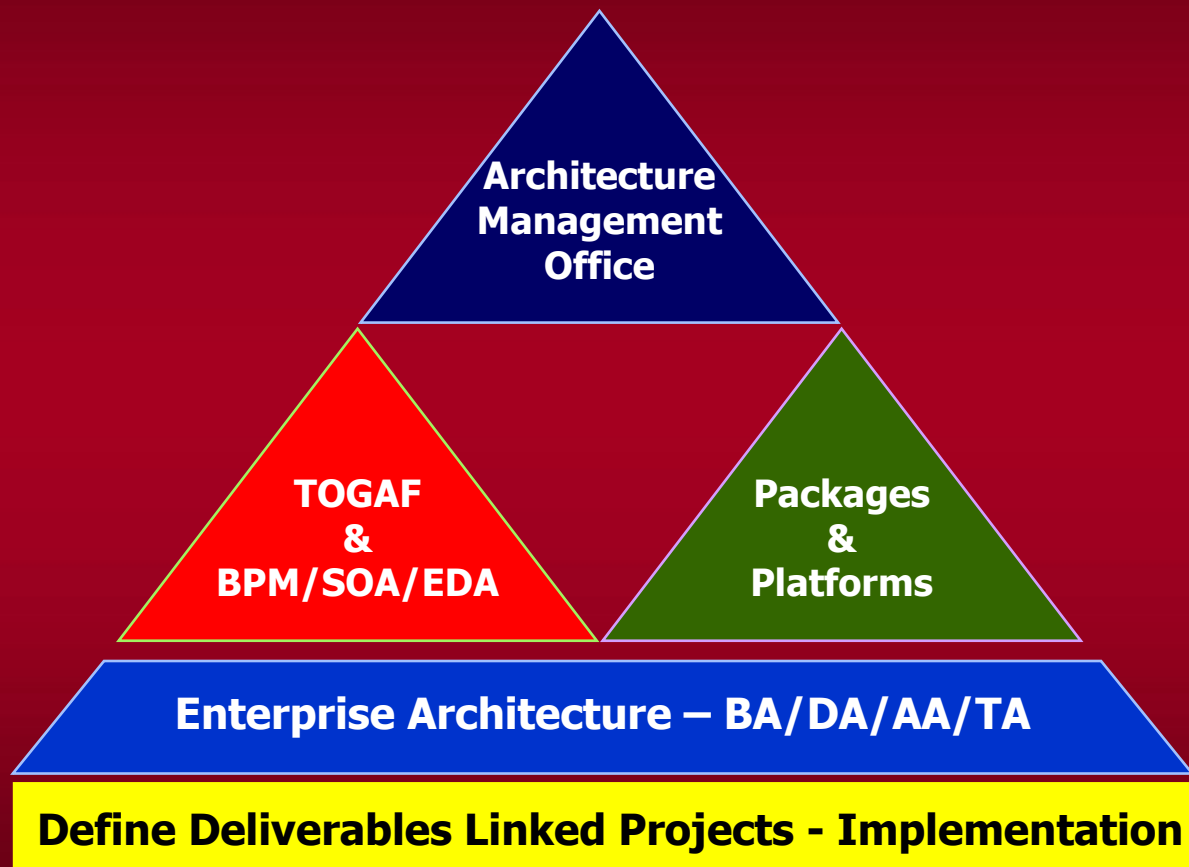

The Approach

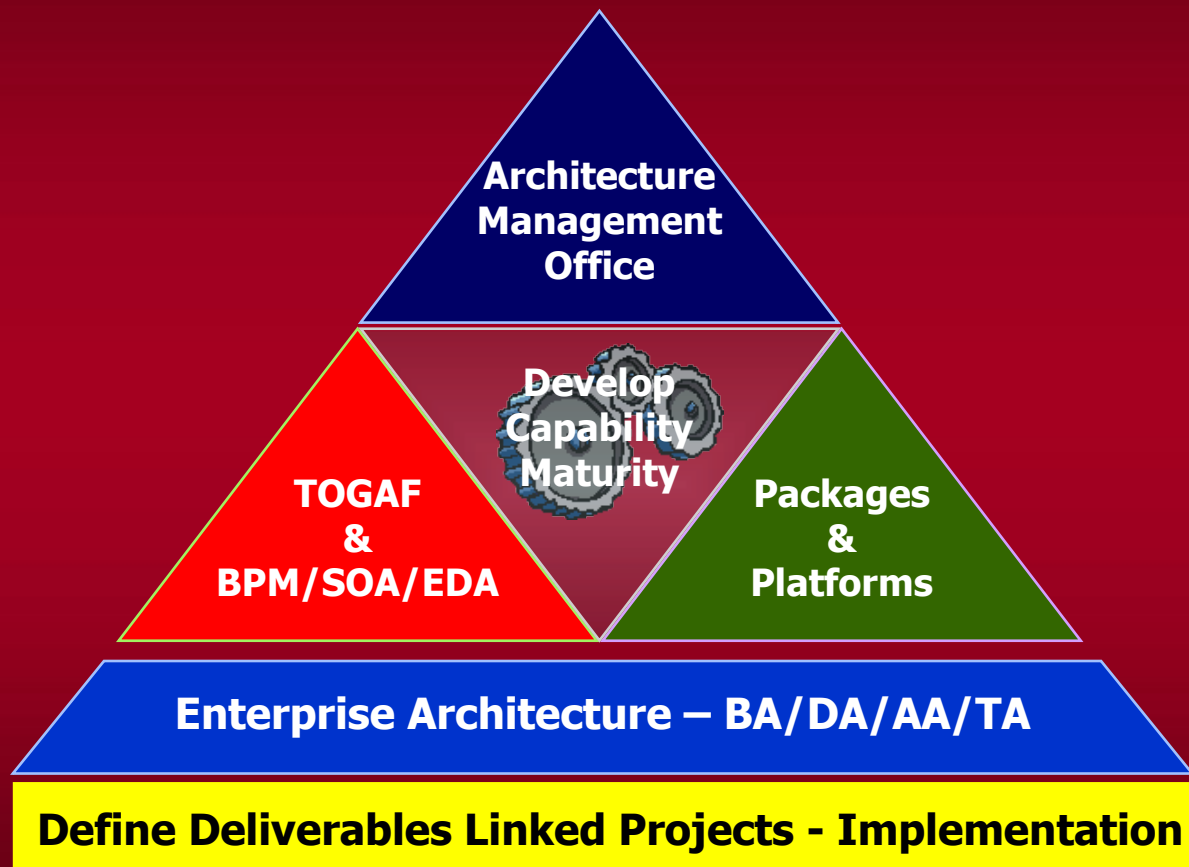

The Approach

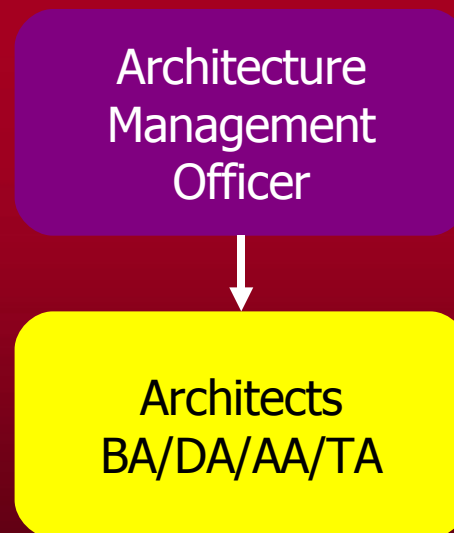

The Approach

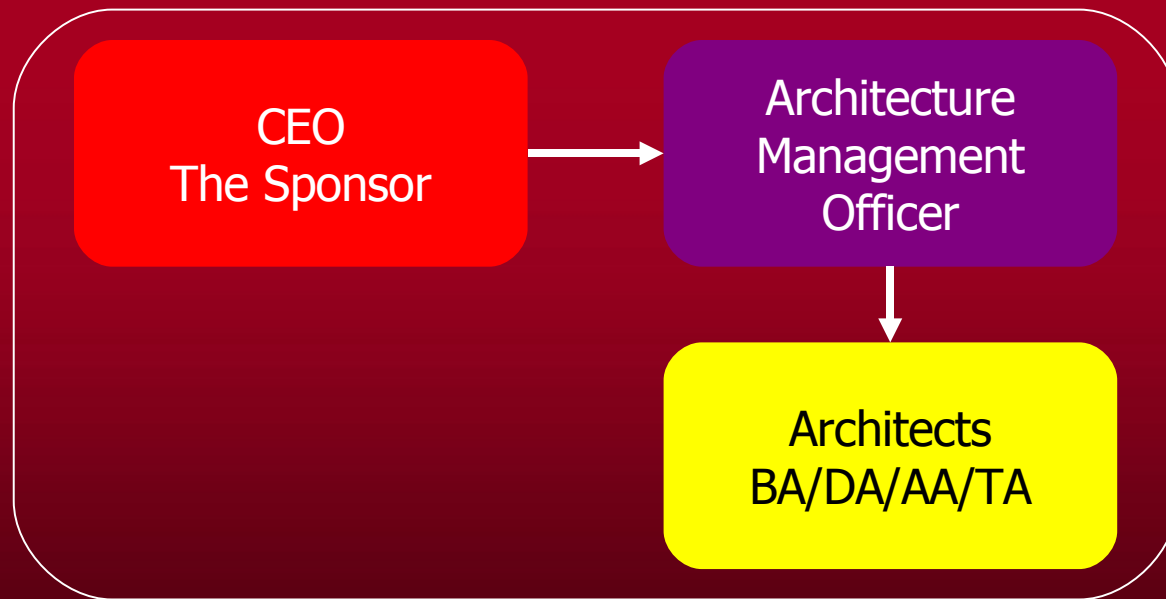

The Approach

The Governance

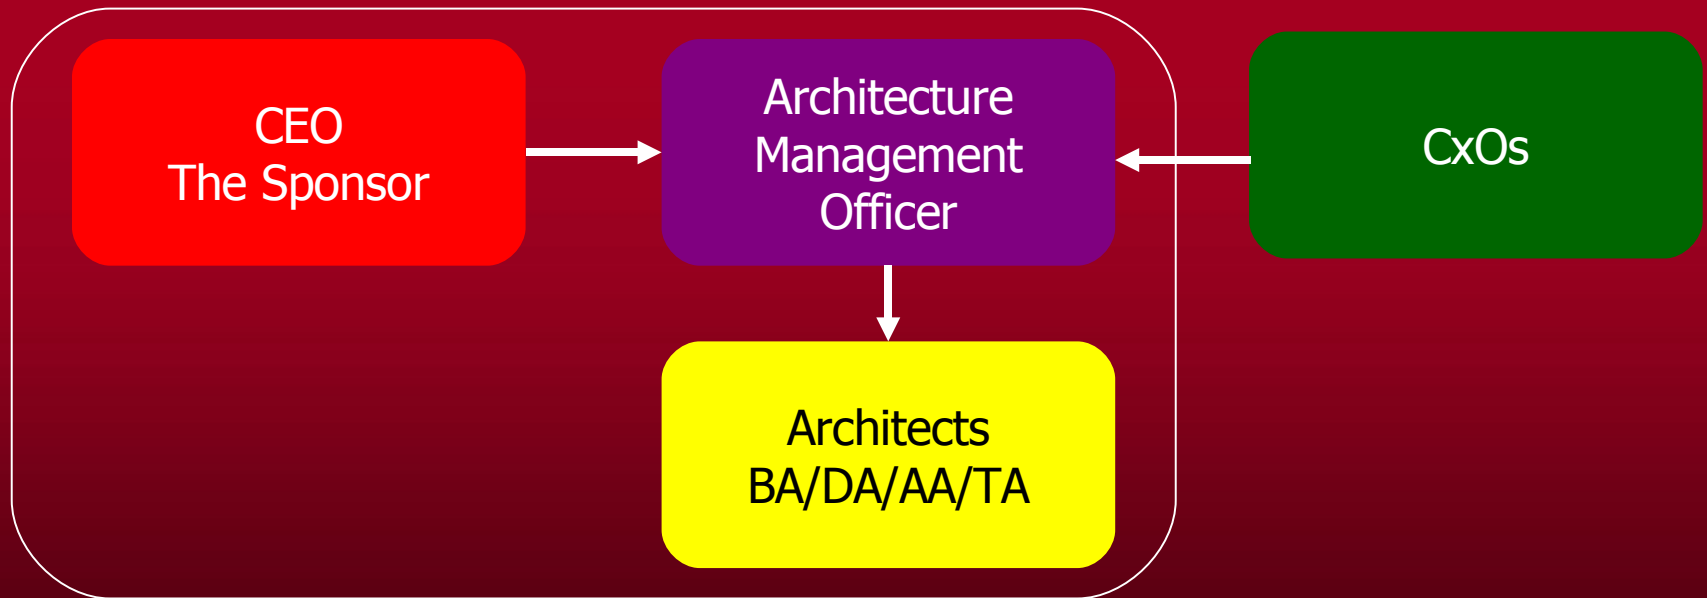

The Governance

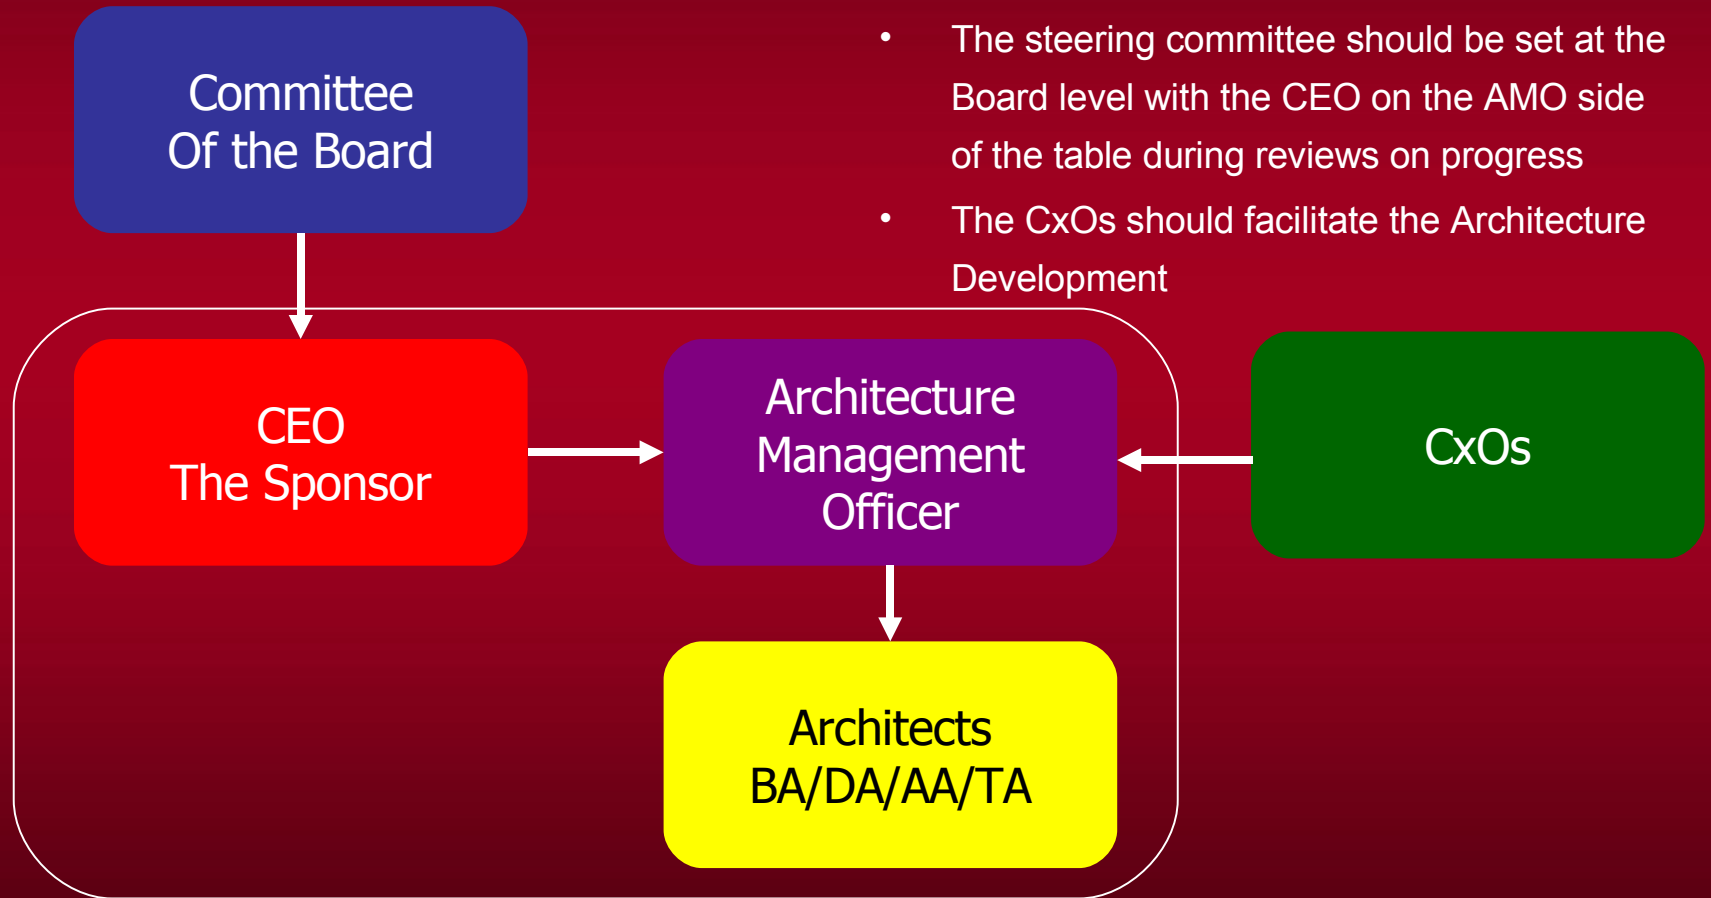

The Governance

- The CxOs should facilitate the Architecture Development

The Governance

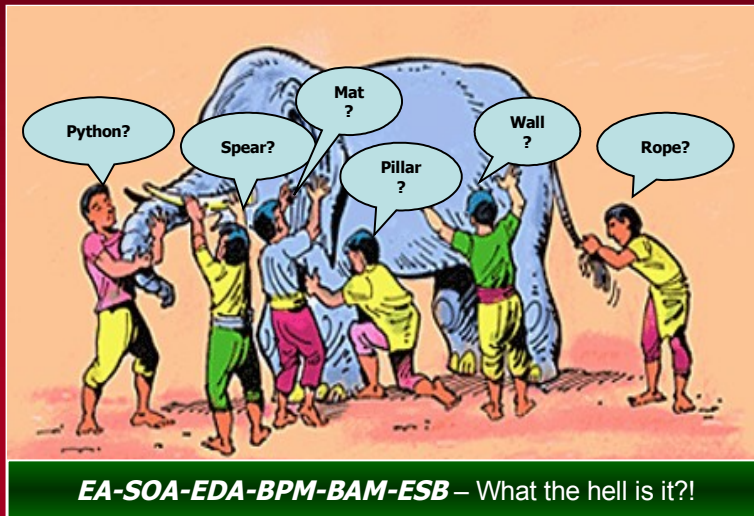

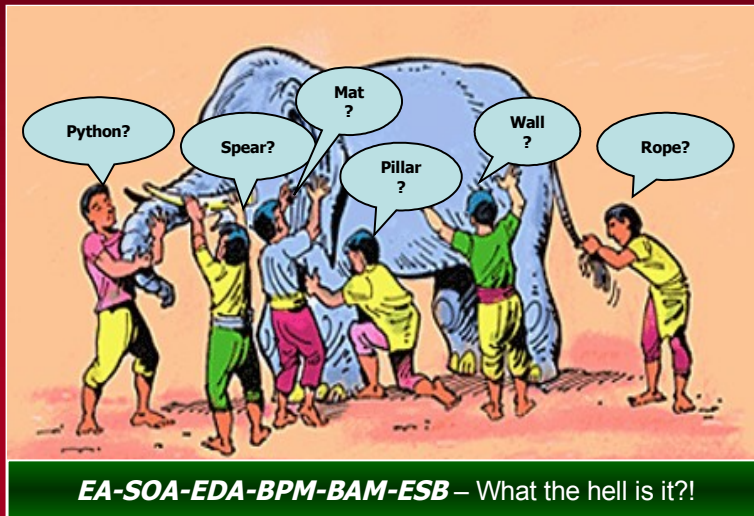

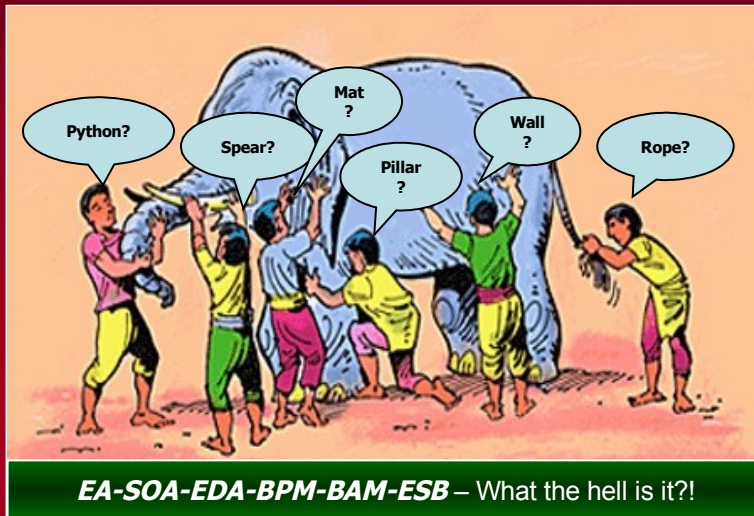

The Don'ts

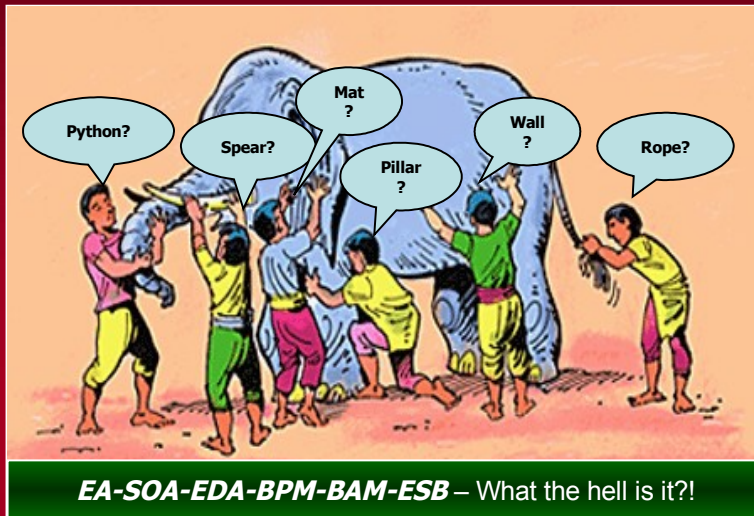

1. It is NOT an IT project – Output will trigger IT projects
2. Steering Committee governance reporting to the CEO/CIO is NOT likely to get the Enterprise buy-in
3. Conventional PMO concept is NOT likely to get the Board Attention
4. AMO should NOT drive the implementation (hand over to Enabling Process Managers) – Just facilitate compliance

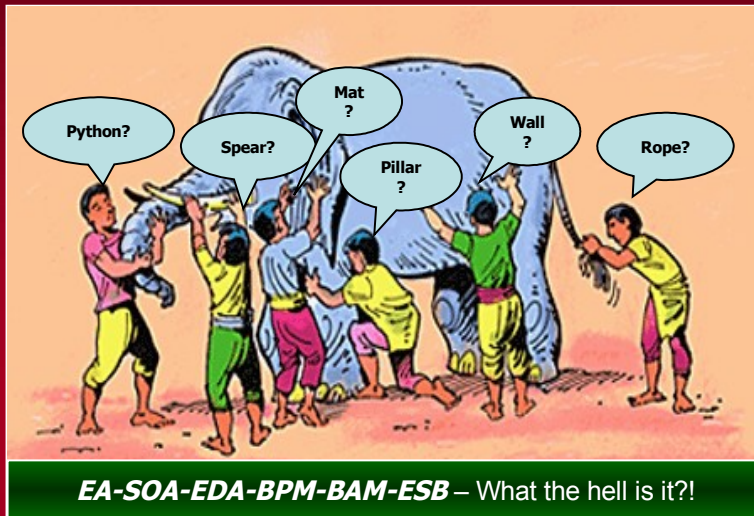

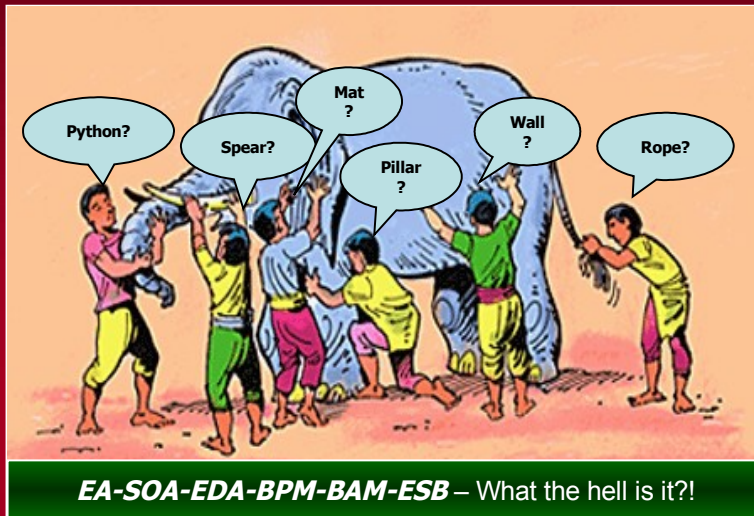

EA – Elephant Accommodated!

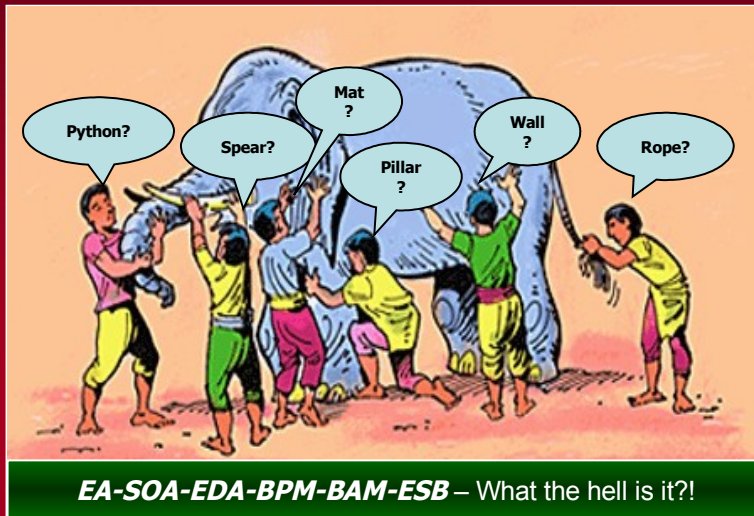

EA – ~~Elephant Accommodated!~~
