Value-Driven Model for LLS

**Where Value is Measured
in the eyes of the patient**

Proposal

Introduce a new approach for measuring the value of healthcare (using a patient-driven model)

- **To provide a unified vision** for delivering sustainable value for patients, practitioners, and providers.
 - **To drive innovation & collaboration.**
 - **To guide continuous improvement** (quality and efficiency) across the continuum of care
-

The Vision

Value

- Patient-Driven

Quality

- Practitioner-Driven

Results

- Provider-Driven

“Health care organizations are increasingly concerned with looking beyond financial performance measures, while focusing on how to deliver higher quality care “

- Love, Dianne, Revere, Lee, and Black, Ken. (2008), *Journal of Health Care Finance*

Needs of the Patients

- To have affordable healthcare.
- To have attainable healthcare.
- To have more accessible healthcare.
- To have consistent levels of quality (results).
- To receive a total healthcare experience:
 - Ensure their functional outcomes are met.
 - Ensure their emotional outcomes are met.
 - Ensure their spiritual outcomes are met.
 - Ensure their outcomes are met across the continuum of care (hospital, clinics, home, and nursing care).

“We continue to pay for lots of medical procedures that don't add to health value and in fact just add costs to the system..”

- Kathleen Sebelius

Needs of the Practitioners

- To improve diagnostic capabilities in a cost-effective manner.
- To improve clinical processes.
- To provide consistent levels of quality.
- To move beyond service, where they can deliver a positive experience.
- To be able to reliably measure value for their patients, for themselves as individual practitioners , and for the providers.

Needs of the Providers

- To get alignment amongst the hospitals, nursing homes, and home care providers on measuring value from a patient perspective.
- To increase collaboration NOT competition.
- To understand how to identify, measure and deliver value as patients flow through the continuum of care.
- To help reduce the overall costs of healthcare while improving the overall value for patients and practitioners (where value is created).

Value-Driven Healthcare Model

Providing Patients with a way to measure the value they should be receiving for healthcare throughout the continuum

Guiding Practitioners to measure and optimize the value they deliver to Patients

Guiding the Providers to deliver value to Patients & Practitioners

LLS

Value

- Patient-Driven

Quality

- Practitioner-Driven

Results

- Provider-Driven

Moving from Assumptions to Implementation

- Establish a program focused on mapping the Jobs & Outcomes across the healthcare domain.
- Build a portfolio of unmet needs (opportunities) for improving value delivery to patients and practitioners.
- Establish a prioritization model to direct resources in an efficient manner.
- Create an open innovation framework using the opportunities to generate ideas that can address the most important (prioritized) unmet needs.
- Align healthcare measurements (Quality = TQM, Evidence-Based = EBM) with value-driven measurements (VDM) to align information and optimize continuous improvement.

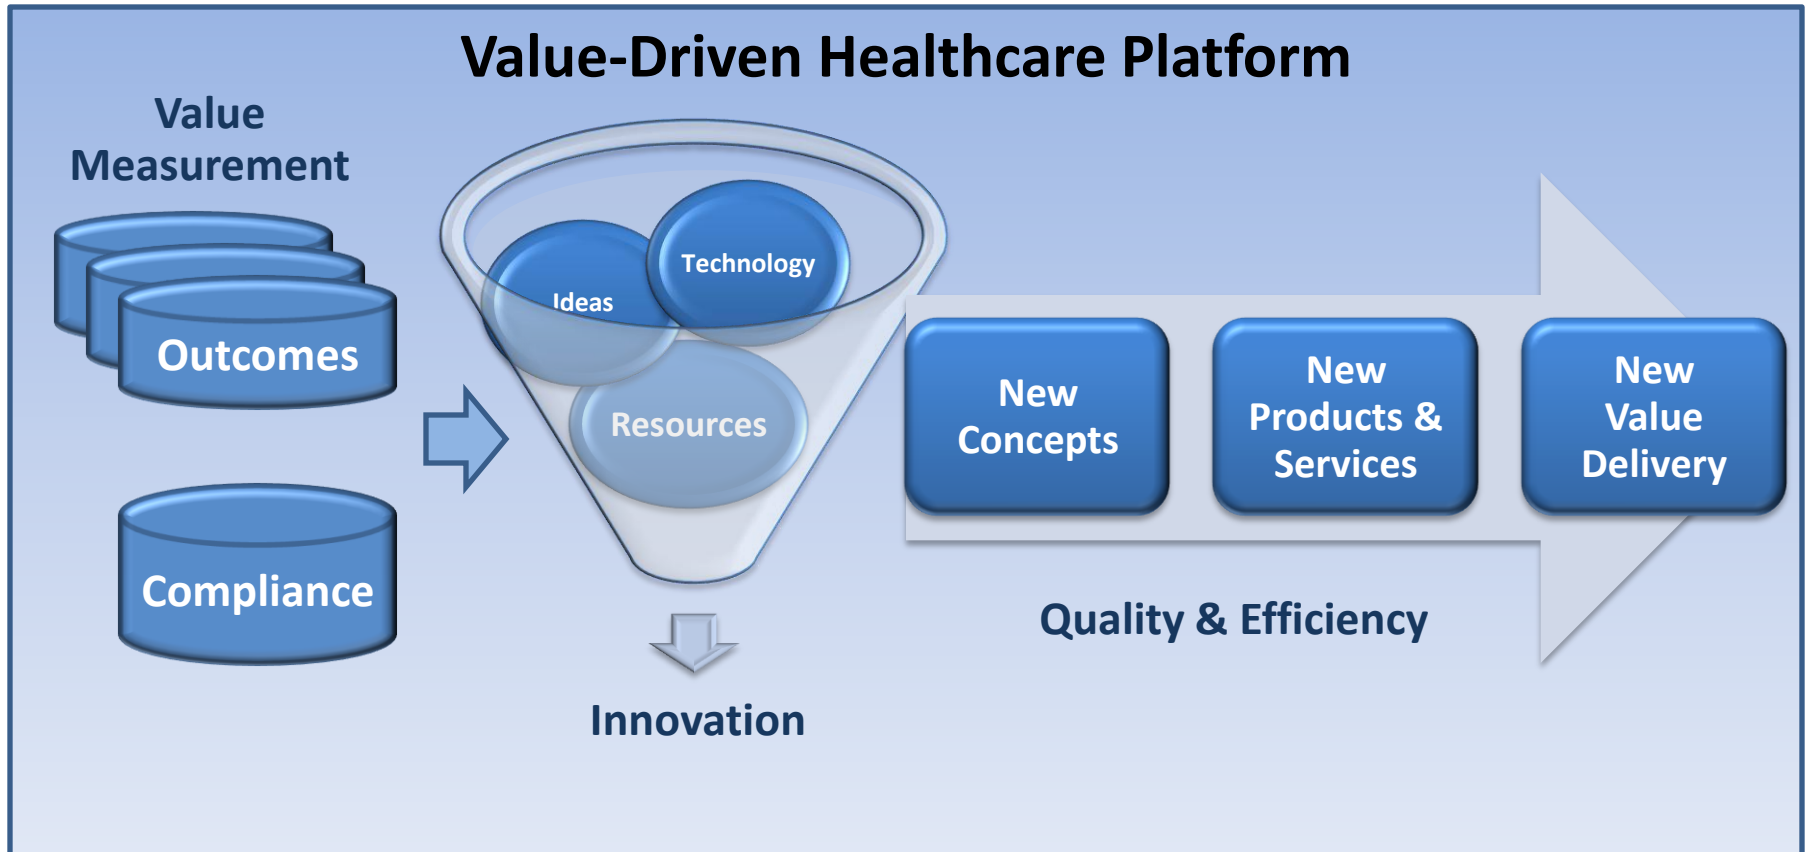

Measuring Value for Healthcare

- Build a portfolio of jobs & outcomes:
 - For measuring value *
 - For driving innovation
 - For directing efforts to improve quality
 - For guiding initiatives to reduce cost

*** Value is created between the Patient & Practitioner**

Enabling Value for Healthcare

Value-Driven metrics are used to drive innovation & direct Quality & Efficiency

Project Overview

Project Charter

Project Charter			
Identify opportunities to improve value delivered to patients.			
Project Number	Leukemia & Lymphoma Society - 001	Charter Date	(TBD)
Project Sponsor	Leukemia & Lymphoma Society – Chicago Chapter	Project Director	Jeffrey Wallk
Project Scope	<i>Capturing patient-centric outcomes using the Value Driven Measurement (VDM) methodology to identify opportunities to improve existing products & services delivered by Leukemia & Lymphoma Society and its research partners for a job that patients are trying to get done.</i>		
Deliverables	▪ Job Study (used to select scope for the study) ▪ Job Reference Model for identifying customer outcomes and metrics for measuring value ▪ Qualitative Analysis (Interview Plan) ▪ Qualitative Analysis (Desired Outcomes) ▪ Quantitative Analysis (Survey Model) ▪ Quantitative Analysis (Value Measurements) ▪ Presentation with Recommendations		
Timeline	▪ Project Breakdown ▪ 3-4 weeks of planning ▪ 4-8 weeks of execution ▪ Qualitative study ▪ Quantitative study ▪ 1 week of presentation & review ▪ Note: Exact timelines may vary based on availability of patients during the study		

Methodology (Planning)

- Definition
 - Model a Job (reference model)
 - Model the Domain
 - Model the Job Ontology w/in the Domain
- Location
 - Identify the sub-domain to study
 - Select the Job(s) w/in the sub-domain to study
- Preparation
 - Interview SMEs who have or do currently execute the job
 - Draft the Job Reference Model for this instance (particular job)
- Confirmation
 - Review the Domain Model
 - Review the Job Ontology Model
 - Review the Job Reference Model for this instance with SMEs
 - Obtain feedback and iterate the above artifacts

Methodology (Execution)

- Execution (includes iterations of Monitoring & Modification)
 - Qualitative Study (**Phase 1**)
 - Interview designated job executors
 - Capture notes from meetings
 - Capture notes from observations
 - Transform notes into desired outcomes
 - Data Profiling, Cleansing, and Quality
 - Verify Cleansed Listing of Desired Outcomes

Methodology (Execution)

- Execution (includes iterations of Monitoring & Modification)
 - Quantitative Study (**Phase 2**)
 - Prepare a survey
 - Prepare profiling questions
 - Provide script for survey executor to read
 - Prepare separate surveys using the desired outcomes
 - » Targeted to specific job executors
 - » Tailored for limited scope to reduce impacts from fatigue
 - » Capture 2 key metrics for each desired outcome (importance & satisfaction)
 - Identify sample list of survey candidates (job executors)
 - Conduct Survey
 - Ideally, should be 3rd party but must be done with anonymity
 - Must capture profiling information
 - Must be able to conduct survey over phone, electronically or via written response
 - Data Cleansing
 - Data Analysis (per Core Functional Job)

Methodology (Presentation)

- Conclusion
 - Thematic extraction from above analysis
 - Focus only on the patterns impacting desired outcomes w/ highest opportunity
 - Presentation of findings to the steering committee

Program Governance

Staffing Plan

- Steering Committee
 - Leadership staff (TBD)
 - Lead Physician *
 - Lead Nurse *
 - Lead Marketing
 - Leukemia & Lymphoma Society Leadership Team
 - Project Team
 - Jeff Wallk (Lead)
 - Nurse Practitioner
- * Depending on which areas are involved in the study.

Key Milestones & Deliverables

- Qualitative Phase:
 - Job Study for Project Scope
 - Prioritize the jobs to study
 - Develop an interview plan
 - Conduct interviews (capture outcomes)
 - Analyze outcomes & complete analysis
- Quantitative Phase:
 - Draft survey (using outcomes)
 - Conduct survey (measure outcomes)
 - Analyze results & identify opportunities
- Presentation of findings
 - To Steering Committee
 - To Leukemia & Lymphoma Society

Potential Future Deliverables

- Establish an opportunity pipeline
- Transition ideas to innovation
- Institutionalize the customer focus program
- Develop a growth strategy for the Leukemia & Lymphoma Society's fundraising efforts
- Develop a roadmap of products & services to drive collaboration and messaging for LLS

A few definitions

What is a Job ?

- The methodology is based on a perspective of measuring the desired outcomes that an individual would like to achieve within the context of a particular "job" that he/she is trying to get done.
- A job is quite simply a definition of what people are actually trying to "get done".

What are Outcomes ?

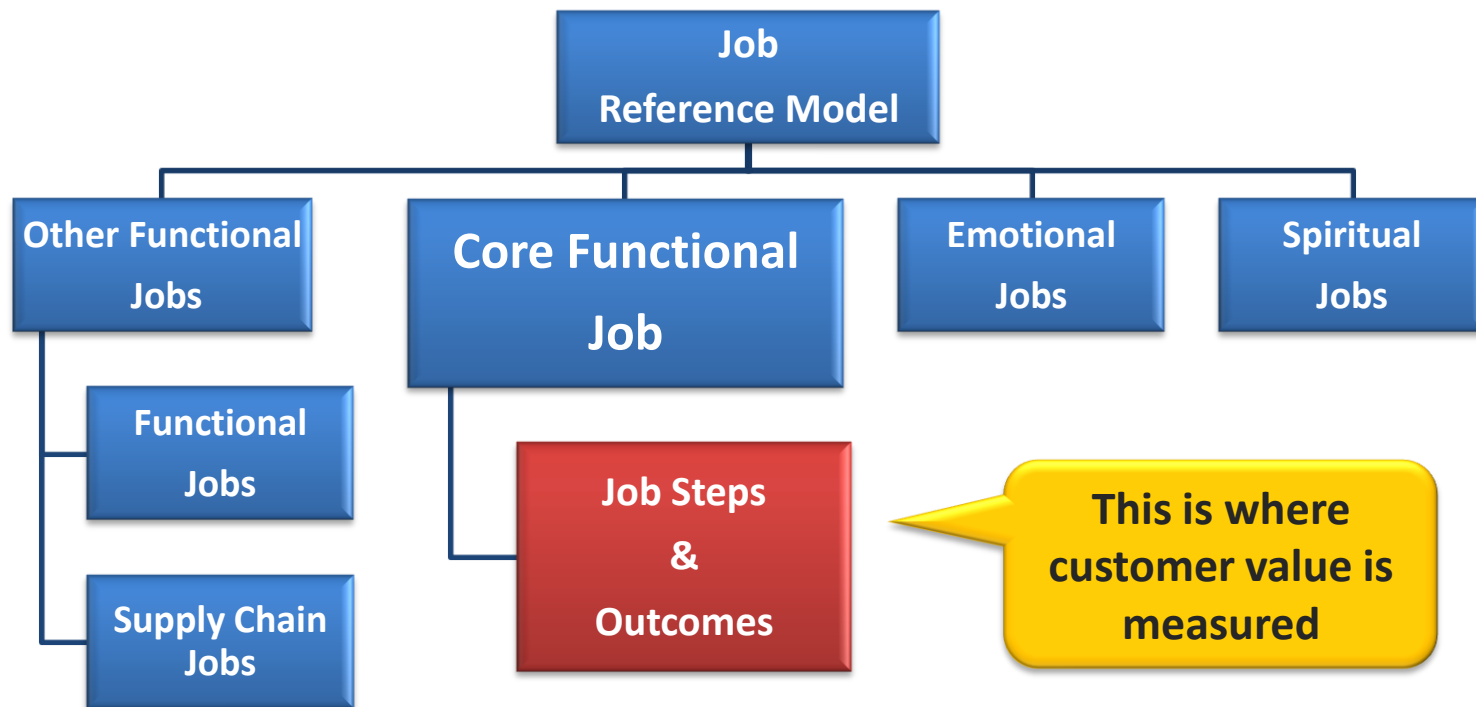

- Each job is comprised of a common set of activities (steps if you will) which involve planning, preparing, executing, monitoring, adjusting, and completing the work to be done.
- A person trying to complete these steps has a set of desired outcomes they wish to achieve for each step in the job. We call these outcomes and they can be measured.

What is a Job Model ?

- A job model is an attempt to identify the relationships between the core job that a person is performing and all the other jobs that can influence the outcomes for the job:
 - Direct & indirect functional jobs
 - Supply chain jobs
 - Emotional & Spiritual Jobs

All of these can be captured initially & measured eventually (depending on the scope of the study)

The Job Model

Our Expertise

Strategic

Driving Change

- Strategic Planning
- Business Model Innovation
- Enterprise Architecture

Driving Customer Value

- Customer Focus
- Market Assessment
- Value Platforms
- Investment Planning
- Product Roadmaps
- Portfolio Planning

Operational

Driving Innovation

- Driving Innovation
- Continuous Improvement

Driving Growth

- Prioritization
- Portfolio Planning
- Resource Planning
- Product Design - Testing
- Execution Management

Driving Quality

- Six Sigma
- Lean & Kaizen

Technical

Driving Sustainability

- Process Models
- Metric Models
- Integration Platforms
- Knowledge Management

Driving Agility & Scale

- Technology Platforms
- Technology Alignment
- Technology Optimization
- Service Level Management
- Agile Delivery
- Adaptable Design
