

Section 2 – Agenda

Key components of BA

The Architecture Guild approach

Analyzing the architecture itself

Outputs from the BA

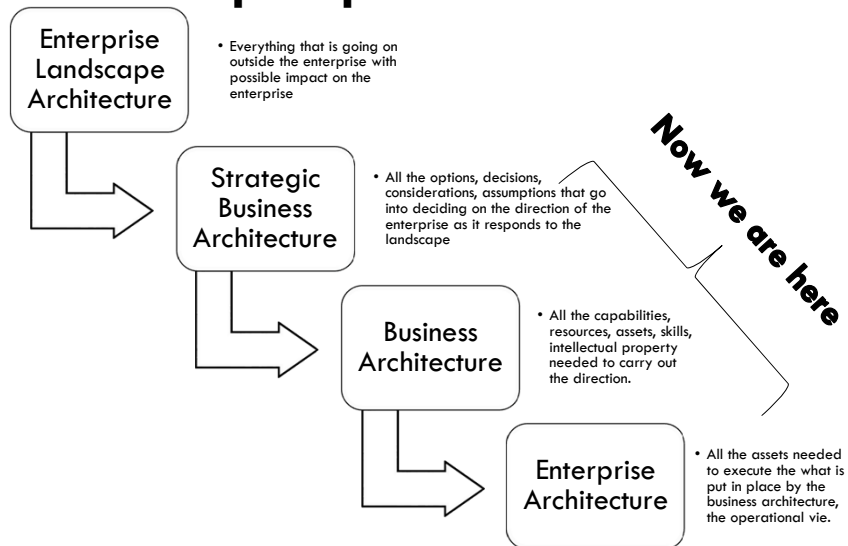

Impact analysis and the BA

Example – Assessing impact of SBA on BA

The Architecture Guild approach

Business Architecture –

“A blueprint of the enterprise that provides a common understanding of the organization and is used to align strategic objectives and tactical demands”.

It focuses on the:

- organization (who does it),
- value stream (how value is achieved),
- how it's done (process) and
- the information that's needed (IT components).

Why use Business Architecture?

It provides a way for the organization and executives to answer basic interrogatives:

“commonly asked questions: who, what, where, when, why, and how”.

Outputs of BA

- ✓ **Blueprints** – a common means to communicate relationships which deliver business clarity enabling and streamlining business transformation across business units, capabilities, and stakeholders
- ✓ **Scenarios** - provide business transparency on specific business initiatives enabling enables improved executive sponsorship and more sustainable funding structure by defining the collective set of initiatives, programs, and projects that leverage business architecture.
- ✓ **Knowledgebase** – provides storage of the information about the business, organized in concise ways that are customized to a given organization's environment.

Analytical method for BA – Analyzing the inputs and outputs

1. *K-Base* contains lists of things such as value streams, initiatives, organizations, capabilities and information
2. *Blueprints* have models (diagrams or maps)
3. *Scenarios* have alternatives for comparisons
4. Needed are relationship matrices (mappings)
5. Quantitative (e.g. simulation) may be available
6. Qualitative analytics need to be added to improve subjective insights

6/18/2015

COPYRIGHT KNOWLEDGE CONSULTANTS, INC. 1999-2015, ALL RIGHTS RESERVED 12

What kind of analytics are useful?

1. Simulation for flows
2. Comparative for alternative
3. Impact analytics for assessing and inferring change and risk
4. Ranking for determining priority
5. Benchmarking
6. Affinity analysis for clustering
7. Best fit for choosing alternatives

Example – Assessing impact of BA on EA

What is there for input?

- Market-to-Process relationship matrix from strategic analysis
- Process-to-Application matrices (15 to 18 aps and 15 to 18 major processes)
- Process-to-Data domains (e.g. Customer)
- Process-to-Rule sets (e.g. credit granting)

What is the analytic used?

- Inference of potential impact of market changes on applications, data domains and rule sets.

What is the goal?

- Identify what is impacted the most
- What is impacted the least
- Reflects tracing change in the markets served to execution parts of the enterprise

Exercises we'll do:

Exercise 1 – Rank markets using the external environment defined by PESTLE – M

- a. Defines part of external architecture and links External-to-Strategic architectures

Exercise 2 – Identify which products are most impacted by the market rank and infer which major processes are impacted by the market rank

We are Here

- a. Links Strategic-to-Business architectures

Exercise 3 – Infer which systems are impacted by the market rank

- a. Links Business architecture-to-Enterprise architecture

Exercise 4 – Open discussion on the results

6/18/2015

What to do for Exercise 3

**There are
6 steps
to this
exercise:**

- Relating processes to Enterprise Architecture components by Creating 3 matrices that have processes as the row heading and applications, data and rules as the column headings
- Using the matrix from exercise 2 that has markets as the row headings and processes as the column headings
- Inferring relationships from processes to the three Enterprise Architecture components –
- Generating 3 resulting matrices for market to applications, information and rules
- Saving the results - Save the resulting matrix for later use
- Interpreting the result - Looking at the frequency of reference to each market and process and discussing the impact
