

INTEGRATED VIEW

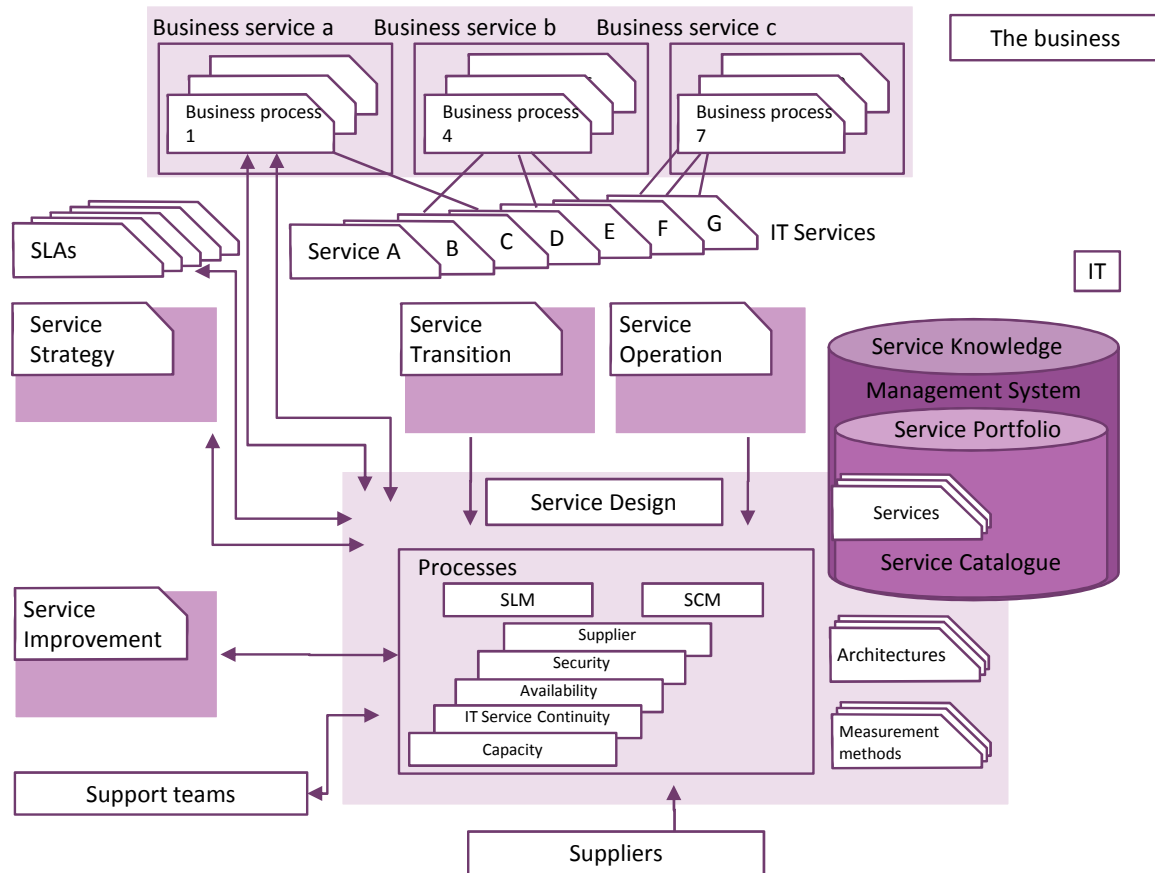

MODULE INTRODUCTION

SERVICE DESIGN scope

Service Design is focused on the design of:

- New or changed Services.
- Service Management systems and tools, especially the Service Portfolio and the Service Catalogue.
- Technology architecture and management systems.
- All ITSM processes.
- Measurement methods and metrics.

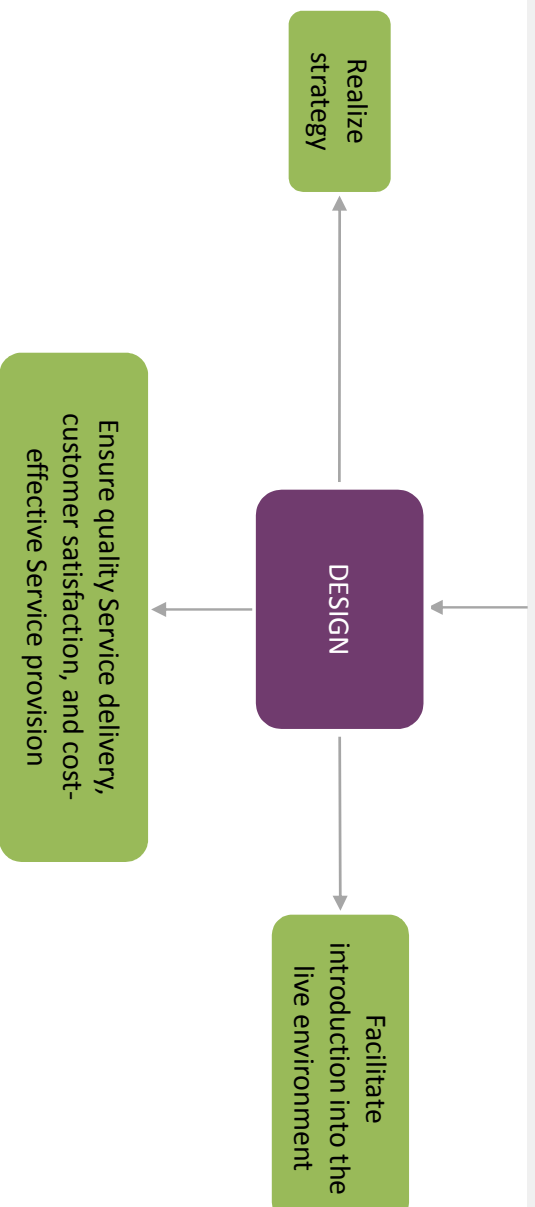

MODULE INTRODUCTION

SERVICE DESIGN purpose

Service Design can be seen as:

Designing IT Services, together with the governing IT practices, processes, and policies to:

Gathering Service needs and mapping them to requirements for integrated Services

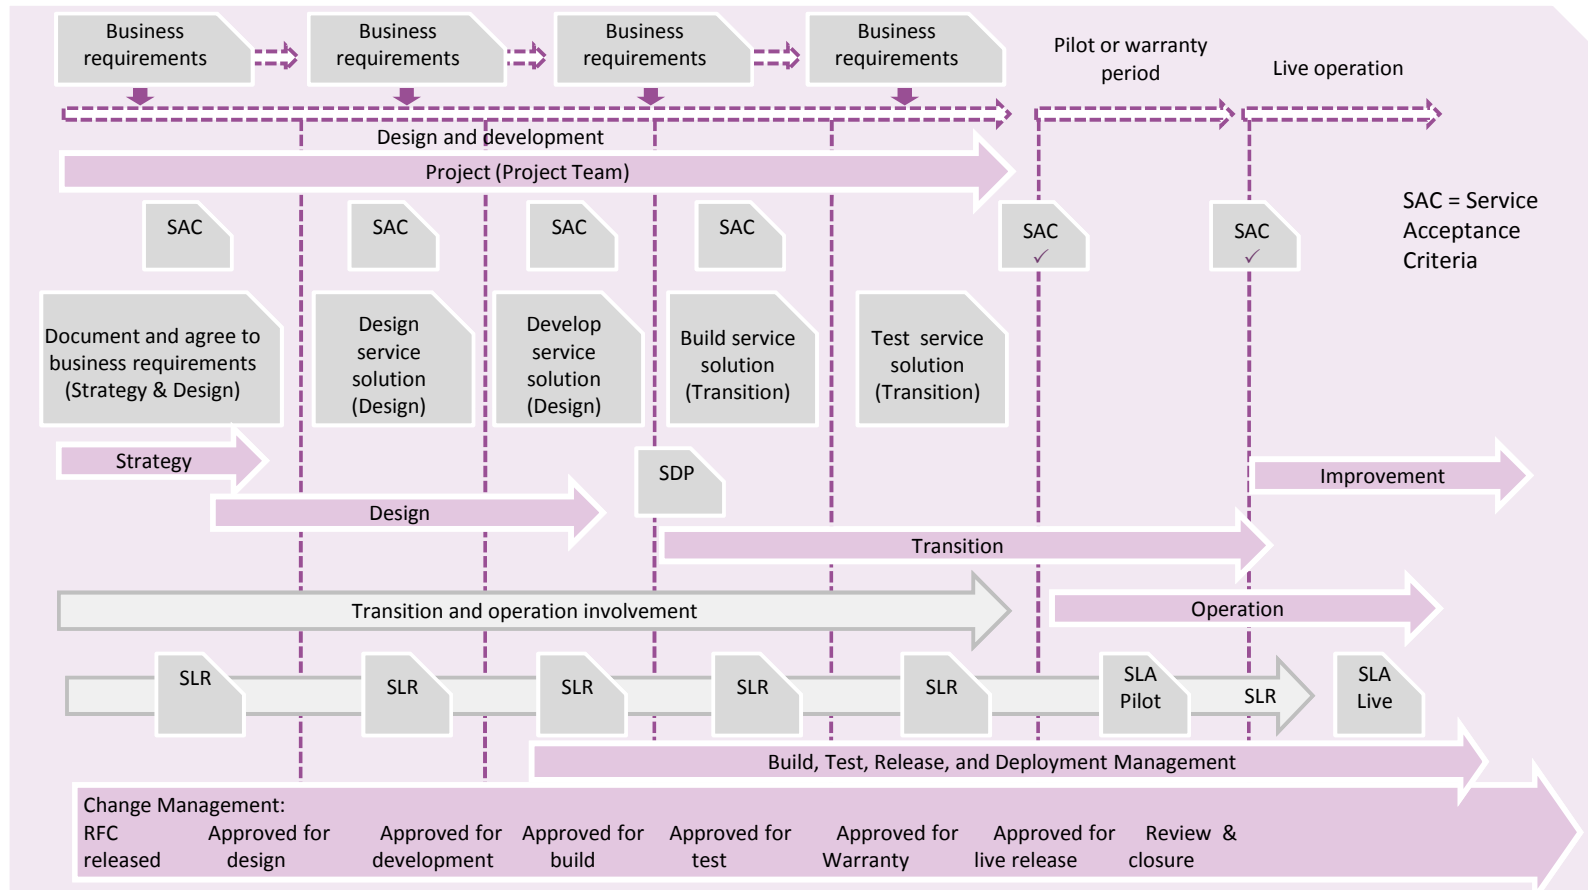

Effectively designing the IT Services so that they don't need a great deal of improvement during their Lifecycle

GENERAL CONCEPTS AND DEFINITIONS

Aligning new Services with business requirements

The role of the project team within the activity of delivering new and changing IT Services to the business and the relationship with design activities is shown below:

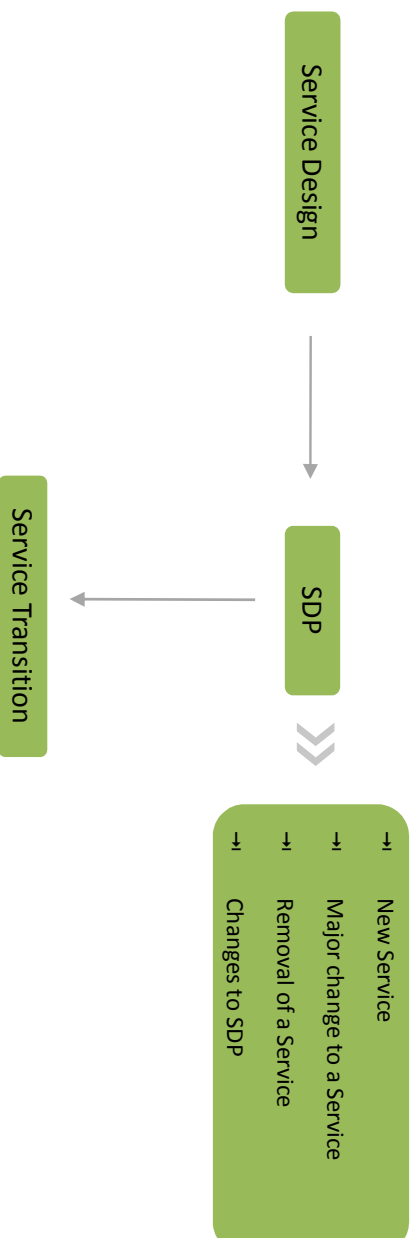

GENERAL CONCEPTS AND DEFINITIONS

SERVICE DESIGN PACKAGE

Service Design Package (SDP)

» This should be produced during the design stage for each new Service, major Change to a Service, removal of a Service, or changes to the SDP itself.

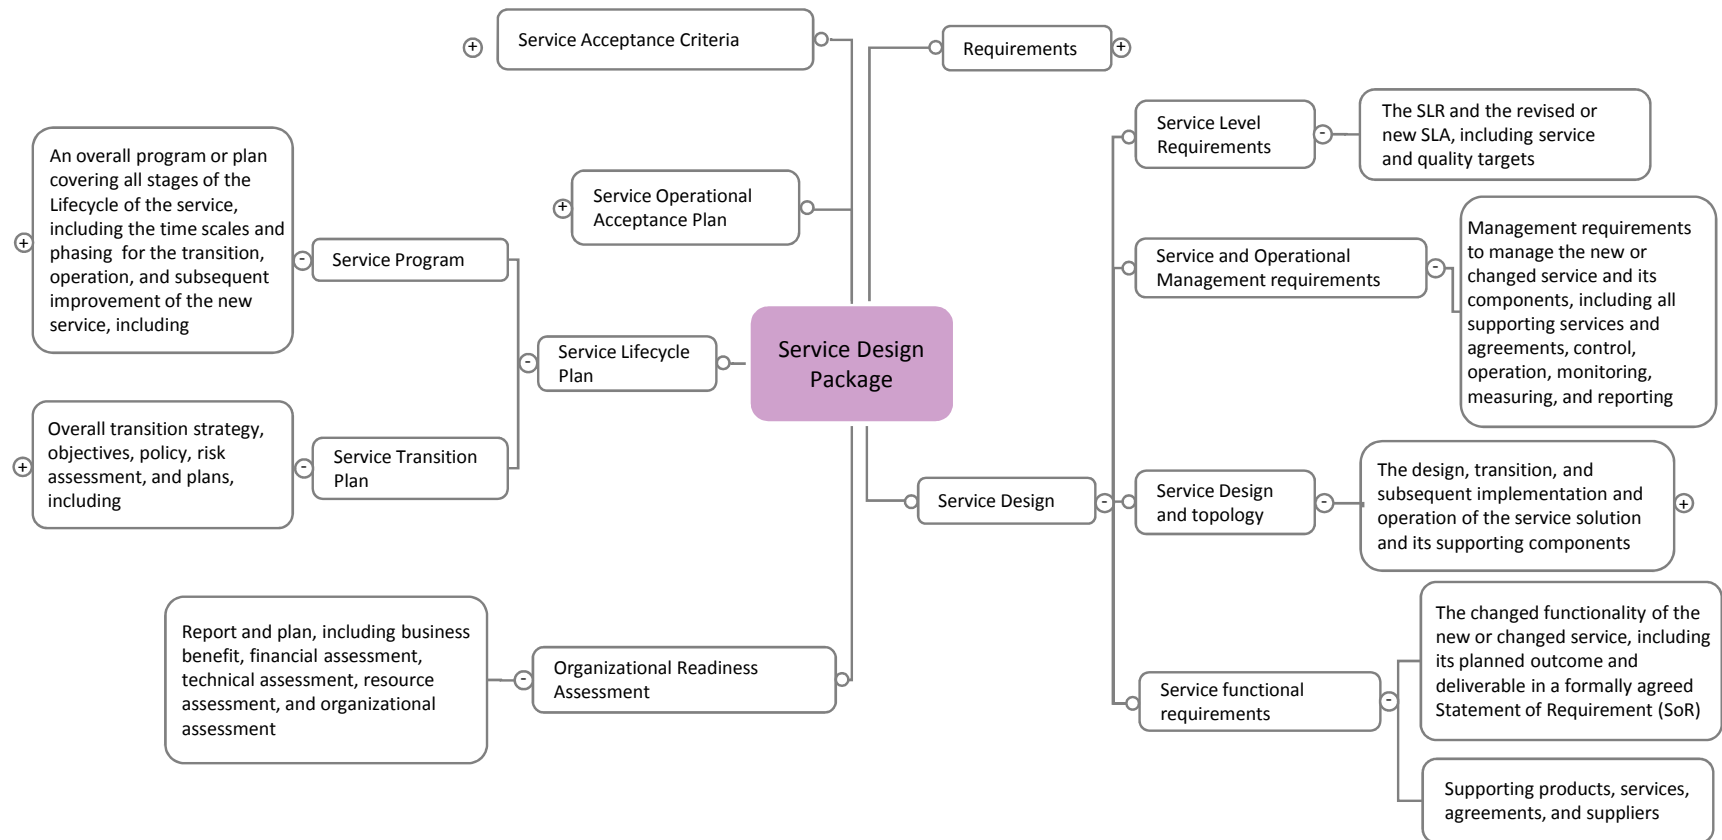

» The SDP is then passed from Service Design to Service Transition and details all aspects of the Service and its requirements through all the subsequent stages of its Lifecycle.

GENERAL CONCEPTS AND DEFINITIONS

SERVICE DESIGN PACKAGE contents

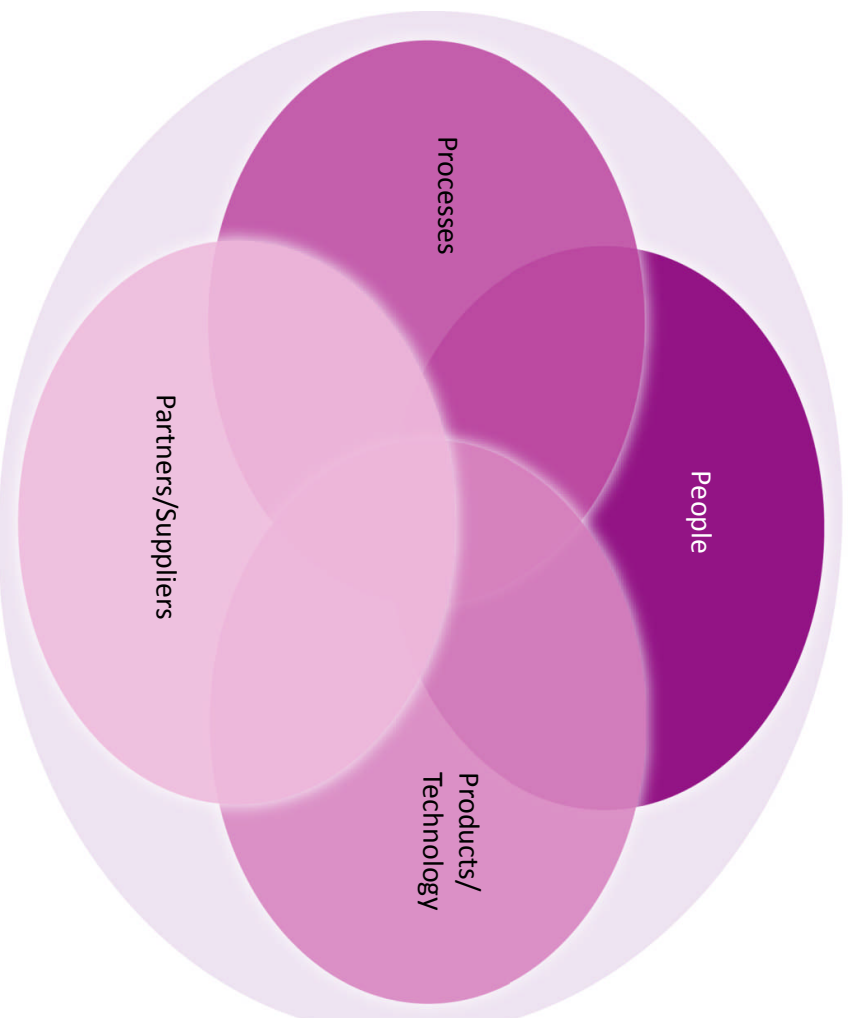

The Service Design Package should contain:

KEY PRINCIPLES AND MODELS

IMPORTANCE OF THE 4 Ps

People, Processes, Products (Services, technology, and tools), and Partners
(suppliers, manufacturers, and vendors).

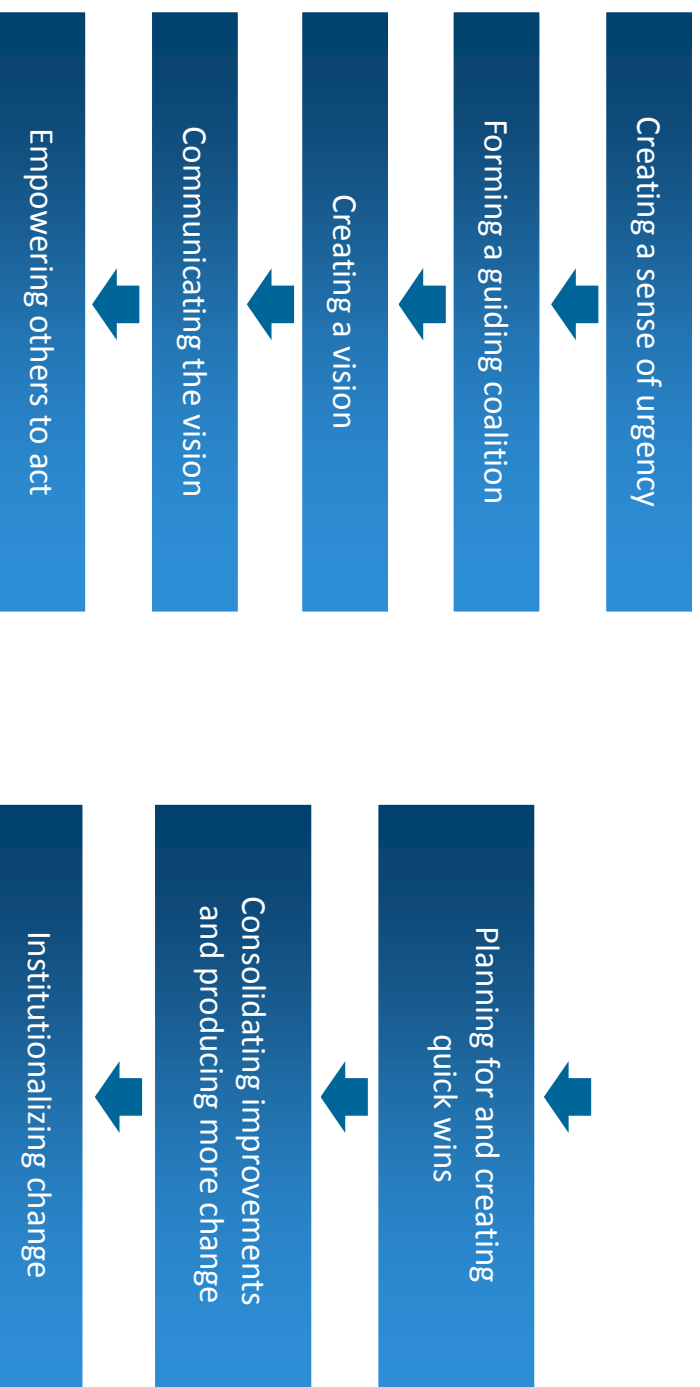

YOUR CHANGE “TOOLKIT”

Your Management of Change toolkit can include:

- A stakeholder map
- A current organization and capability assessment
- Current constraints (organization, capability, and resources)
- Policies, processes, and procedures
- Roles and responsibility definitions, for example, the RACI matrix
- A communication strategy and plan
- A supplier framework
- An education strategy and plan
- Kotter’s “eight steps to transform your organization”

Organizational Change Management

Kotter's 8-Step Approach to Organizational Change

A WINNING PROGRAM STRATEGY

1

Respect the cultural/behavioral management of change
– mobilize early and focus on quick wins.

2

Align with corporate goals and programs

3

Introduce formal training and
communication planning

A PROCESS IMPLEMENTATION APPROACH

- 1 Define the vision
- 2 Define the objectives
- 3 Identify the processes
- 4 Define the format of the processes
- 5 Design and document the processes
- 6 Implement the processes.
- 7 Audit the processes
- 8 Measure the performance of the processes

Service Management Tools

Some aspects that organizations should consider when evaluating Service Management tools:

- Breadth and depth of functionality
- Flexibility in implementation, usage, and data sharing
- Implementation complexity
- Ease of use and quality and extent of supplier training
- Quality of management information produced as standard
- Ease with which data can be analyzed and presented
- Data structure, handling, and integration
- Distributed data input plus central data view
- Experience and commitment of the supplier to best practices
- Data backup and security
- Cost

Questions to Ponder

- How well do we understand our Services?
- Do all our Services all have Owners?

- How well do we understand our Customers?
- How well do we understand our Customer's business?

- How effective are we in the areas of:
- Service Strategy?
 - Service Design?
 - Service Transition?
 - Service Operation?

Do we have Continual Improvement skills?

- Which of the Service Management processes are in place?
- How widely are they employed?
- How effective and efficient are they?
- Are there recognized and accountable Owners?

How can we best leverage ITIL and other best practices?

How will we manage organizational change?

Where do we go from here?

IN CLOSING

*“Be not afraid of growing slowly, be
afraid only of standing still.”*

Chinese Proverb
