

Building the Pipeline for Enterprise Services

Outline

- List of Ideas
 - Opportunity Alignment
 - Establish the Pipeline
 - Building the Product Roadmap
 - Suggested Next Steps
-
- Appendix

List of Ideas

Idea/Job	Domain	Opportunity (Desired Outcomes)
Universal Registry Service for component architectures	ALL	• Reduce the complexity required to manage service architectures (internal & external to enterprises) • Improve the performance with utility-based services for 3rd party service providers • Increase the likelihood that medical devices can leverage remote computing resources
Virtual Service Bus with prioritization and queue management for services w/in a company, w/in a cloud, and w/ 3 rd parties.	ALL	• Increase the likelihood that 3rd party services can be aligned with enterprise services to create a holistic capability • Reduce the amount of time required for services to locate resources to complete complex transactions • Increase the likelihood that enterprises are able to consume 3rd party services
Optimized routing for messaging services (key opportunity for utility-based computing)	ALL	• Reduce the bandwidth costs associated with high volume computing in distributed environments • Increase the likelihood that companies are able to scale their business services for internal and external customers.

List of Ideas

Idea/Job	Domain	Opportunity (Desired Outcomes)
Separate management of private / stealth communications for government	Government	• Increase the likelihood that government resources are able to support secure communications with stealth resources (i.e. computing nodes, wireless objects, satellites). • Reduce the costs associated with routing information to stealth operations (esp. mobile operations) • Improve the ability to track activity associated with stealth communications.
3 rd party management for identity management	ALL	• Increase the likelihood that enterprise assets can be tracked and managed across distributed locations. • Reduce the likelihood of enterprises needing to build and maintain their own identity management infrastructures • Increase the likelihood that collaboration between enterprises can be managed in a secure manner • Reduce the complexity associated with managing silos of resources (human, computing, logical, and physical assets). • Increase the likelihood that security can be maintained as the number of corporate assets increase • Increase the likelihood that security can be maintained as the corporate assets are increasingly made accessible to 3rd party assets.

List of Ideas

Idea/Job	Domain	Opportunity (Desired Outcomes)
Metadata Management	ALL	• Reduce the effort required to support Metadata for business analytics • Reduce the amount of time required to capture collaborative knowledge • Reduce the likelihood that Metadata will not grow out of control • Increase the likelihood that knowledge workers are able to find the right knowledge for the job they are performing • Increase the likelihood that corporate data can be more easily managed if metadata is abstracted from their operational data stores
Managing High Volume Computing/Analytics	ALL	• Reduce the costs for maintaining large data stores • Reduce the complexity associated with managing Very Large Databases • Reduce the amount of time that information is not accessible due to backend performance issues (backup, restores, indexing) • Reduce the amount of time required to deliver business intelligence • Increase the likelihood that customers are more proactive with identifying areas of opportunity • Increase the likelihood that customers are more proactive with identifying areas of concern (problems and/or patterns that might lead to problems)

Opportunity Alignment

1. Align our thoughts on areas of opportunity.
2. Conduct a domain analysis to narrow the focus.
3. Conduct a Job Study to capture a list of jobs that we might want to study in detail.
4. Identify which jobs we want to study in more detail.
5. Establish a formal Customer Focus program for building an opportunity pipeline.

Establish the Pipeline

- Qualitative Phase:
 - Job Study for Project Scope
 - Prioritize the jobs to study
 - Develop an interview plan
 - Conduct interviews (capture outcomes)
 - Analyze outcomes & complete analysis
- Quantitative Phase:
 - Draft survey (using outcomes)
 - Conduct survey (measure outcomes)
 - Analyze results & identify opportunities
- Present findings to Leadership.

**Based on the
Strategyn
Methodology
(see appendix)**

Establish the Pipeline

- Establishing the opportunity pipeline
 - Prioritize the list of opportunities
 - Introduce tools for generating ideas (to address opportunities)
 - Generate ideas that address one or more desired outcomes
 - Establish a process to select the best ideas
 - Multi-Opportunity Ideas are usually the best
 - Select the best ideas & agree upon list of recommendations to pursue
 - Present top ideas to the leadership with recommendations
- Transition ideas to innovation
 - Gain approval to pursue recommendations
 - Assigns ownership to develop & implement changes
 - Create new products & services
 - Modify existing products & services

Building the Product Roadmap

- Create a reference model for defining the jobs from which value is derived.
- Build a repository of metrics that the company can use to measure the value that customers want to obtain.
- Map the value metrics against the services and products used to deliver value to customers.
- Identify opportunities (gaps between what is delivered versus what customers want) to improve services & products.
- Identify products & services that the company can deliver sustainable value.

Suggested Next Steps

- Jeff to provide his ideas (template). Done
- Jeff to provide a strawman to establish a pipeline and move forward. Done
- Mario & Team to provide their ideas.
- All to review/align on the strawman.
- Agree on goals & deliverables for dialogue.
- Schedule face-to-face dialogue.

**The Value Enablement
Group LLC**
A Global Strategic Firm

Appendix

(Overview of Strategyn Methodology)

What is a Job ?

- **A job...**
 - Defines **the high-level goal** the customer is trying to accomplish **or problem** they are trying to resolve
 - Defines **an action, application or process** for which one or more products or services are presently being hired or may be needed

Job Illustrations

- Participate in services
- Perform a mitzvah service
- Purchase a product or service
- Obtain counseling
- Obtain education
- Performing surgery
- Share knowledge
- Printing a document
- Study Torah

What are outcomes ?

- Customers intrinsically use “metrics” to define the successful execution of a specific job
- These metrics (or desired outcomes) ARE the customer’s needs
- If a desired outcome is both important and unsatisfied, it is unmet
- The more important and less satisfied an outcome is (the more unmet it is) the greater it represents an opportunity for value creation
- ... customers may not be able to articulate a solution, but they can certainly articulate what outcomes they want to achieve

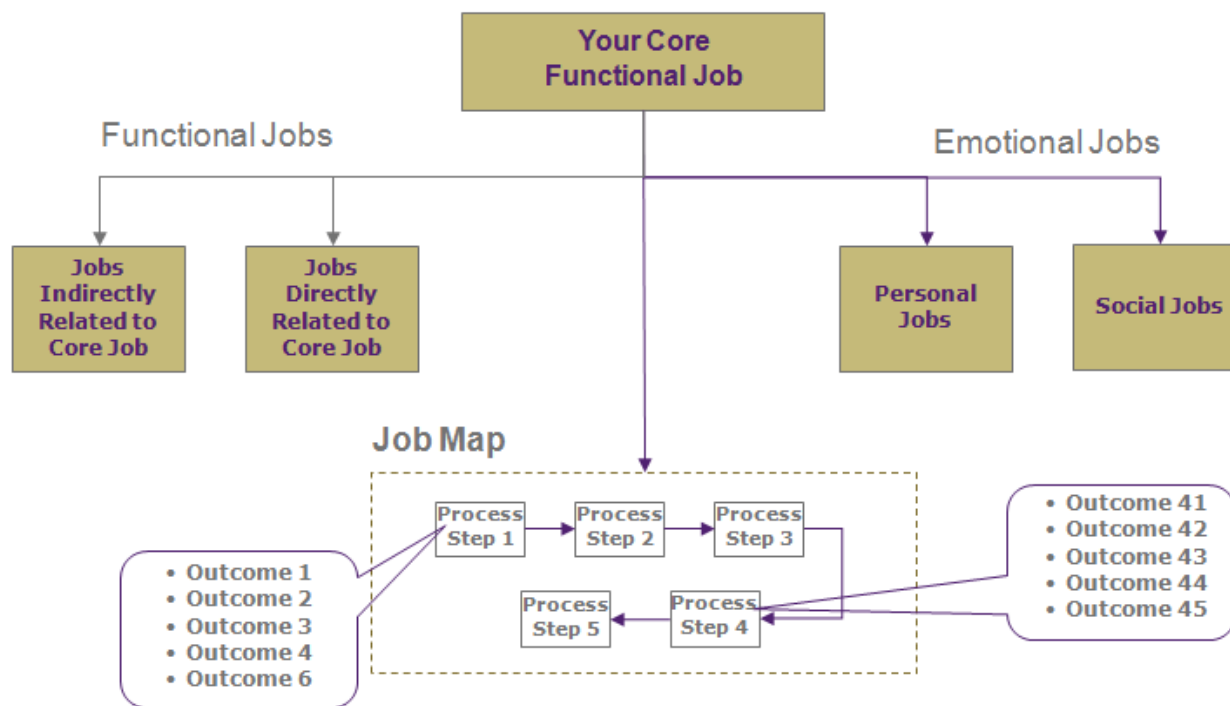

Customers couldn’t articulate their “need” for a microwave oven, but they did know they wanted to:

- Minimize the time it takes to prepare a meal
- Minimize the time it takes to clean up after cooking
- Minimize the likelihood of overcooking a meal
- Increase the likelihood that the food is cooked evenly throughout

Model for Relating Jobs & Outcomes

Job Executor:

Desired outcomes are the metrics customers use to measure the successful execution of a job.

Capturing & Measuring Value

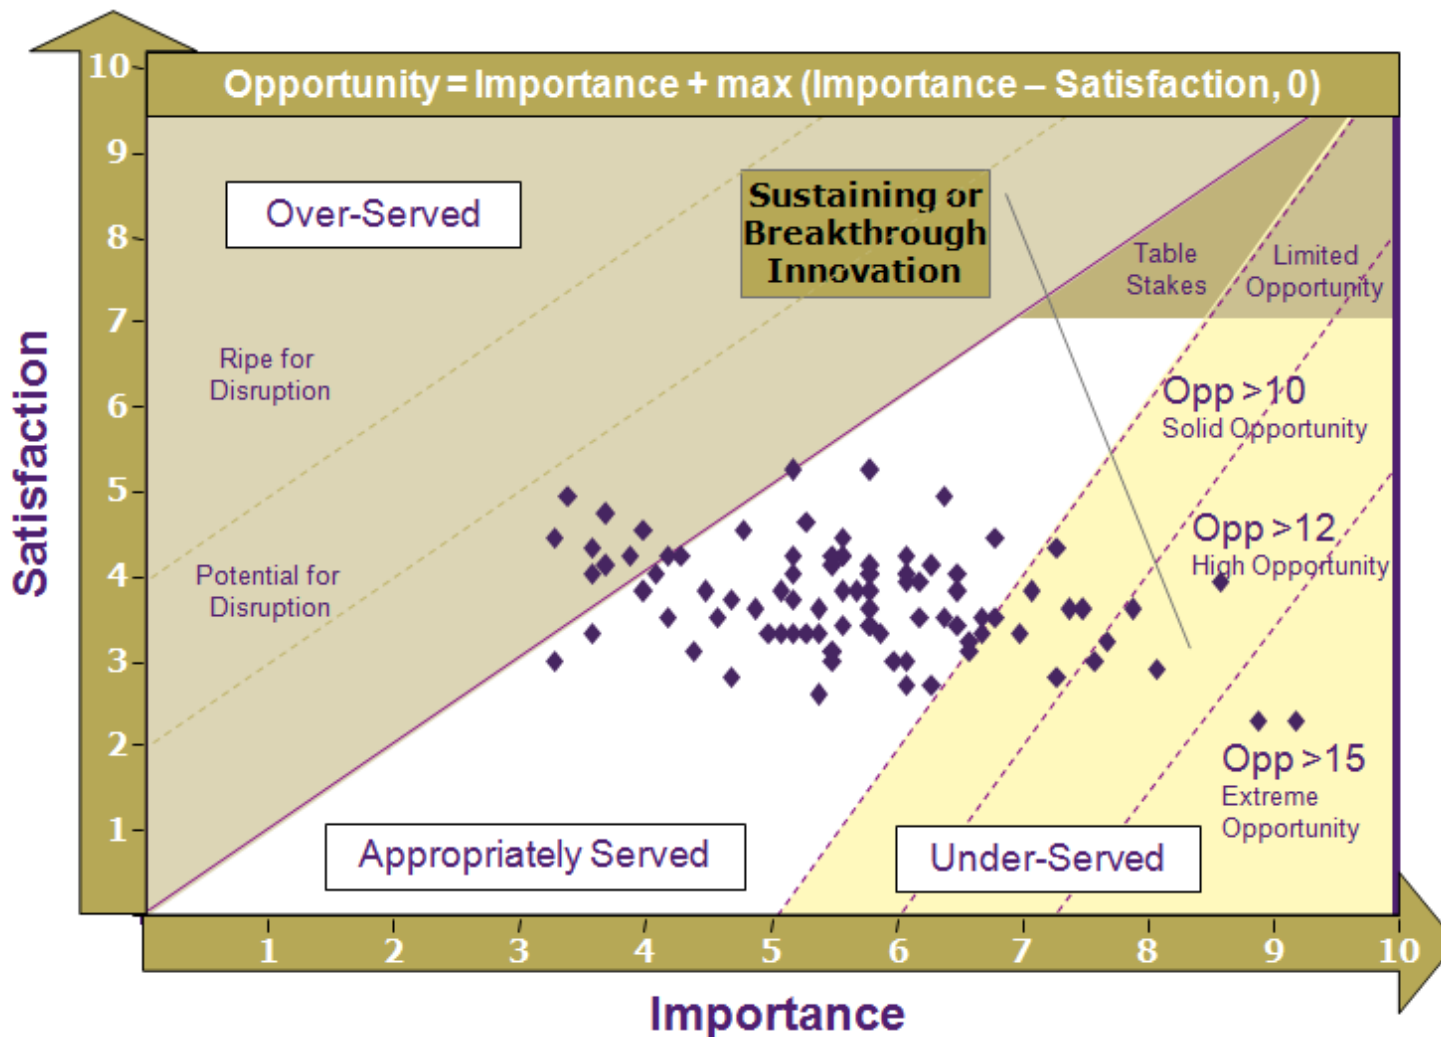

Administer a survey (web, phone) to a significant population

How <u>important</u> is it that you are able to....?	Not Important At All	Somewhat Important	Important	Very Important	Extremely Important
Increase the percent of plants that emerge at the same time	☐ ₁	☐ ₂	☐ ₃	☐ ₄	☐ ₅
Minimize the time it takes the plant to absorb nutrients once they are planted	☐ ₁	☐ ₂	☐ ₃	☐ ₄	☐ ₅

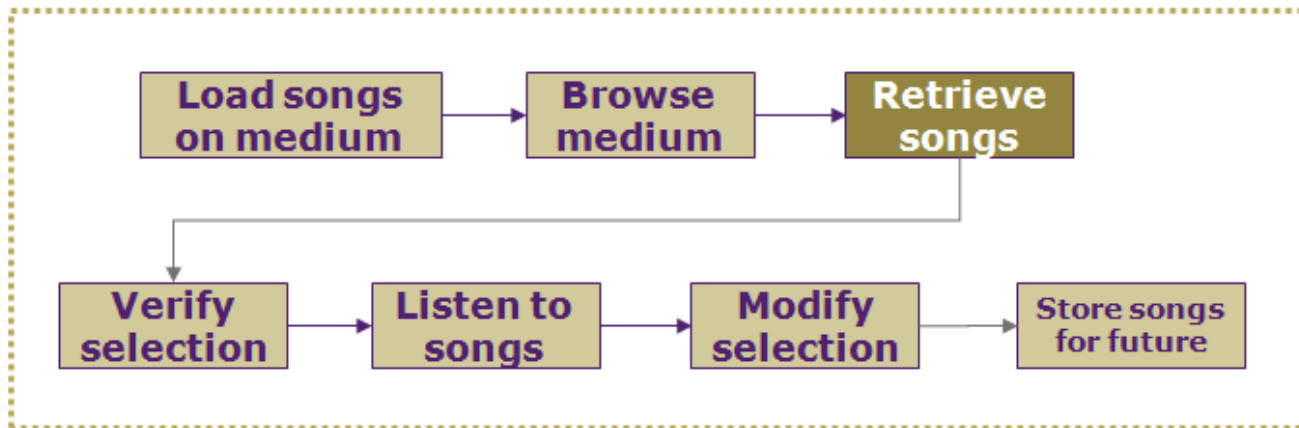

How <u>satisfied</u> are you with your ability to....?	Not Satisfied At All	Somewhat Satisfied	Satisfied	Very Satisfied	Extremely Satisfied
Increase the percent of plants that emerge at the same time	☐ ₁	☐ ₂	☐ ₃	☐ ₄	☐ ₅
Minimize the time it takes the plant to absorb nutrients once they are planted	☐ ₁	☐ ₂	☐ ₃	☐ ₄	☐ ₅

$$\text{Opportunity} = \text{Importance} + \max (\text{Importance} - \text{Satisfaction}, 0)$$

Identifying & Prioritizing Opportunities

Example: Job of Storing & Retrieving Music

Outcomes

Increase the number of songs that are available for selection

Minimize the time it takes to locate a song when critical information is missing, e.g., the name of the song, the artist, etc.

Minimize the likelihood of inadvertently selecting the wrong song

Minimize the time it takes to queue the songs in the order in which they are to be played

Minimize the time it takes to remove a song from the queue
