

BA Guild - Information Map (Business / Data Object Listing)		
Type	Name	Description
Core	Individual	High level object that contains a common set of attributes inherited by all instances of Individual (member, vendor, partner, etc.)
Core	Member	BA Guild members who are in good standing, some of whom participate in one or more volunteer roles on teams
Core	Vendor	Individuals who work for organizations that provide products and/or services to the Guild
Core	Partner	Individuals who work for organizations that collaborate with the Guild on initiatives
Core	Location	Physical or Logical addresses used to identify where a given asset can be found
Core	Product	Covers products and services used by customers to address one or more desired outcomes
Core	Asset	Logical or physical objects used by individuals (within the Guild or outside) to plan, create, and/or deliver products to customers (includes support for operations and strategy)
Core	Organization	An portion or entirety of a legal entity (companies, firms, institutions, divisions, agencies)
Contextual	Strategy	Covers any data attributes associated with strategy formation, prioritization, and measurement
Contextual	Alliance	I'm separating this from Agreements (for now) as these may not be formalized in a contractual arrangement (need to confirm)
Contextual	Agreement	These cover NDAs, agreements with members who wish to participate on Guild teams, and formal contracts between organizations (one of which is the Guild)
Contextual	Campaign	Marketing initiative to promote awareness, create interest in, and potentially drive new membership growth for the Guild
Contextual	Pipeline	List of requests for change to address issues, opportunities, and provide updates to Guild products, key artifacts (BIZBOK), or improve internal operations.
Contextual	Initiative	Activities, Actions / Tasks, and projects formed to respond to requests in the pipeline
Contextual	Team	Member resources assembled into working units to address an initiative
Contextual	Process	Set of defined activities used to deliver a specific set of pre-defined outcomes in a consistent manner
Contextual	Schedule	Set of pre-defined activities or events that have a time-based dependency and which may also have dependencies on other activities or events
Contextual	Profile	Preferences captured for an individual that can be used to guide (target & tailor) communications, integration, collaboration, and service delivery.
Contextual	Persona	Consolidates the demographics, ethnographics, and geographic perspectives for an individual
Contextual	Certification	Covers all the data & business objects associated with a BA Certification
Contextual	Financial	High Level data object that captures all the transactional data objects and attributes associated with the order-2-cash cycle
Contextual	Report / KPI	This includes all manner of reports, metrics, KPIs and measures (upon which they are based)
Contextual	Content	Covers any type of collateral or artifacts that are produced for internal or external consumption (includes media files, social media, and website content)
Contextual	Lifecycle	There is some natural overlap with Events. These cover the common processes like PLM (product lifecycle mgmt), O2C (order 2 cash), BIZBOK Release Mgmt, Information Mgmt, content management, project management, and knowledge mgmt.
Contextual	Event	Covers planned and un-planned (ad-hoc) activities that occur at a given date and time which need to be tracked along with additional attributes to support pattern analysis, causal analysis, impact analysis, and performance.
