

## **BAMM 10/18/2017**

We reviewed the following packages:

- Product Package
- Product Details Package
- Capability Package
- Strategy Package

There term "Resources" is not a normative concept per Bill and therefore should not be used  
Capability Manner (term) the concept is similar to Capability Increment (TOGAF & Archimate)  
Capability Manner is complimentary to Capability Instance

Strategy determines how (the manner in which) the Capability evolves, hence the term  
"manner"

Performance measures were discussed as to how a Capability Manner (and therefore  
Capability) would be evaluated. Bill suggested that we can use a maturity model (Levels 1  
thru 5) as a way to assess Capability Manners and build heat maps (aggregated scores for a  
Capability)

Bill elaborated on various measures that we may want to consider for assessing a Capability:

- Number of instances (complexity),
- Target State (instances, maturity, consistency, impact)
- Effectiveness
- Impact on Value
- Impact on Risk
- Performance
- Quality
- Scale (complexity, volume)
- Agility (applicability, ease of adoption, maintenance)
- (Reference TOGAF White paper which discusses Measurement associated with maturation)

Strategy discussion showed some of the terminology and lineage from Defense industry  
Meta Models. Jim discussed the alignment of mission and change with similar treatment in  
the Defense Architecture Frameworks (MODAF, DODAF). Both have been unified via UPDM.  
Jim highlighted a few key points within the strategy package:

- Unified Capability Manner
- Gives us alignment with the operational view for a capability
- Allow for inheritance of capabilities
- Distinguished by different performance characteristics
- Alignment with mission planning architectural frameworks

Per Bill, we need a definition for Capability Manner (based on observable characteristics). How does this play into the Capability Instance. Capability Instance (manner) inherits characteristics from one or more Capabilities. Note: There are no assumptions at the model level that inheritance even exists. If we want to add this, we need to explicitly specify it. MOF does not provide a way to express inheritance.

Capability Manner is associated with a Capability Instance. Initiatives are used to progress Capability Manners for one or more Capability Instances. When they changed Strategy, they introduced a course of action that could make changes to one or more capability instances OR a capability manner

Late Change: the term manner was changed to "characteristic"

Agenda for Next Week:

1. Information Package
2. Alignment Mechanism
