Classes:

Class Analysis

in package 'BMM'

This class is used to address the activities associated with moving from an objective (as part of establishing strategy) to one or more courses of action. The Analysis activities act upon the information (typically in the form of measurements) to guide decision making as to one or more courses of action. In addition, the Analysis can also be used to modify / update a given course of action based on new Measurements and/or changes to existing Measurements.

Assembler: Course of Action

Object in package 'BMM'

This class instance of Assembler is used to form a touch point between the BMM and BACM metamodels via the Course of Action Class (as it relates to the MEANS in the BMM) and the Course of Action Class (as it relates to strategy in the BACM).

Assembler: Course of Action
Version 1.0 Phase 1.0 Proposed
Jeff Wallk created on 5/17/2018. Last modified 5/17/2018

Assembler: Objective

Object in package 'BMM'

This class instance of Assembler is used to form a touch point between the BMM and BACM metamodels via the abstraction between a Desired Result (as it relates to the END in the BMM) and the Objective class (as it relates to strategy in the BACM).

Assembler: Objective
Version 1.0 Phase 1.0 Proposed
Jeff Wallk created on 5/17/2018. Last modified 5/17/2018
