

The Enterprise Architecture Profession

Five-Year Roadmap

Stakeholder Benefits of Enterprise¹ Architecture²

1. Society

- a. Enterprises deliver the value promised in their:
 - i. Strategies,
 - ii. Brands,
 - iii. Products, and
 - iv. Services.
- b. Enterprises adhere to the Legal and Regulatory requirements of the territories and activities in which they participate.
- c. Enterprises express their unique identities in stimulating ways.
- d. Enterprises inspire the creation of new Enterprises.

2. Enterprise

- a. The Enterprise combines existing operations with new investments, in a structure and sub-structures that fulfil its obligations to stakeholders, especially in respect of (but inter alia):
 - i. The delivery of value
 - ii. The management of risk.
- b. The Enterprise creates and maintains boundaries, themes and spaces for its employees, partners and suppliers to deliver value both for the Enterprise and themselves.
- c. The Enterprise conceives of and scientifically exploits structural innovations.
- d. The Enterprise formally recognises the structural, operational and investment implications of market and strategy scenarios, and exploits the resulting knowledge to formulate and execute its business plans.

¹ For the purposes of defining the Enterprise Architecture profession, an Enterprise is:

- A. A legal entity that delivers value to its stakeholders by placing resources at risk (e.g. a company, a government agency, a political organisation, etc.), or
- B. Any venture that such a legal entity undertakes, including those in coalition with other such entities, that is expected to deliver value by placing resources at risk (e.g. a strategy, a project, a bounded operating unit, a partnership, etc.).

² Enterprise Architecture is the art and science of creating, maintaining and developing Enterprises.
