

CAEAP: Value Delivery Model

Proposal for aligning the practice, profession, & public

Jeff Wallk
Director of Product & Services

***“Advocacy Body for...
The Public, The Practice, The Profession”***

Agenda

- Challenges
- Goals
- Value Delivery Model
- Overview of the Model
- Next Steps

Challenges

- We have a number of initiatives w/in CAEAP that need to be aligned:
 - A recently introduced apprenticeship program
 - The 18-part Professional Practice Guide
 - A multi-phase Accreditation program
 - A proposed Customer Focus program
- External to CAEAP, there are number of ongoing programs within standards bodies, EA affiliates, and a newly announced EA curriculum at Penn State.
- CAEAP is still evolving the value proposition, points of differentiation, and areas for collaboration amongst all the silos of EA initiatives throughout the public.

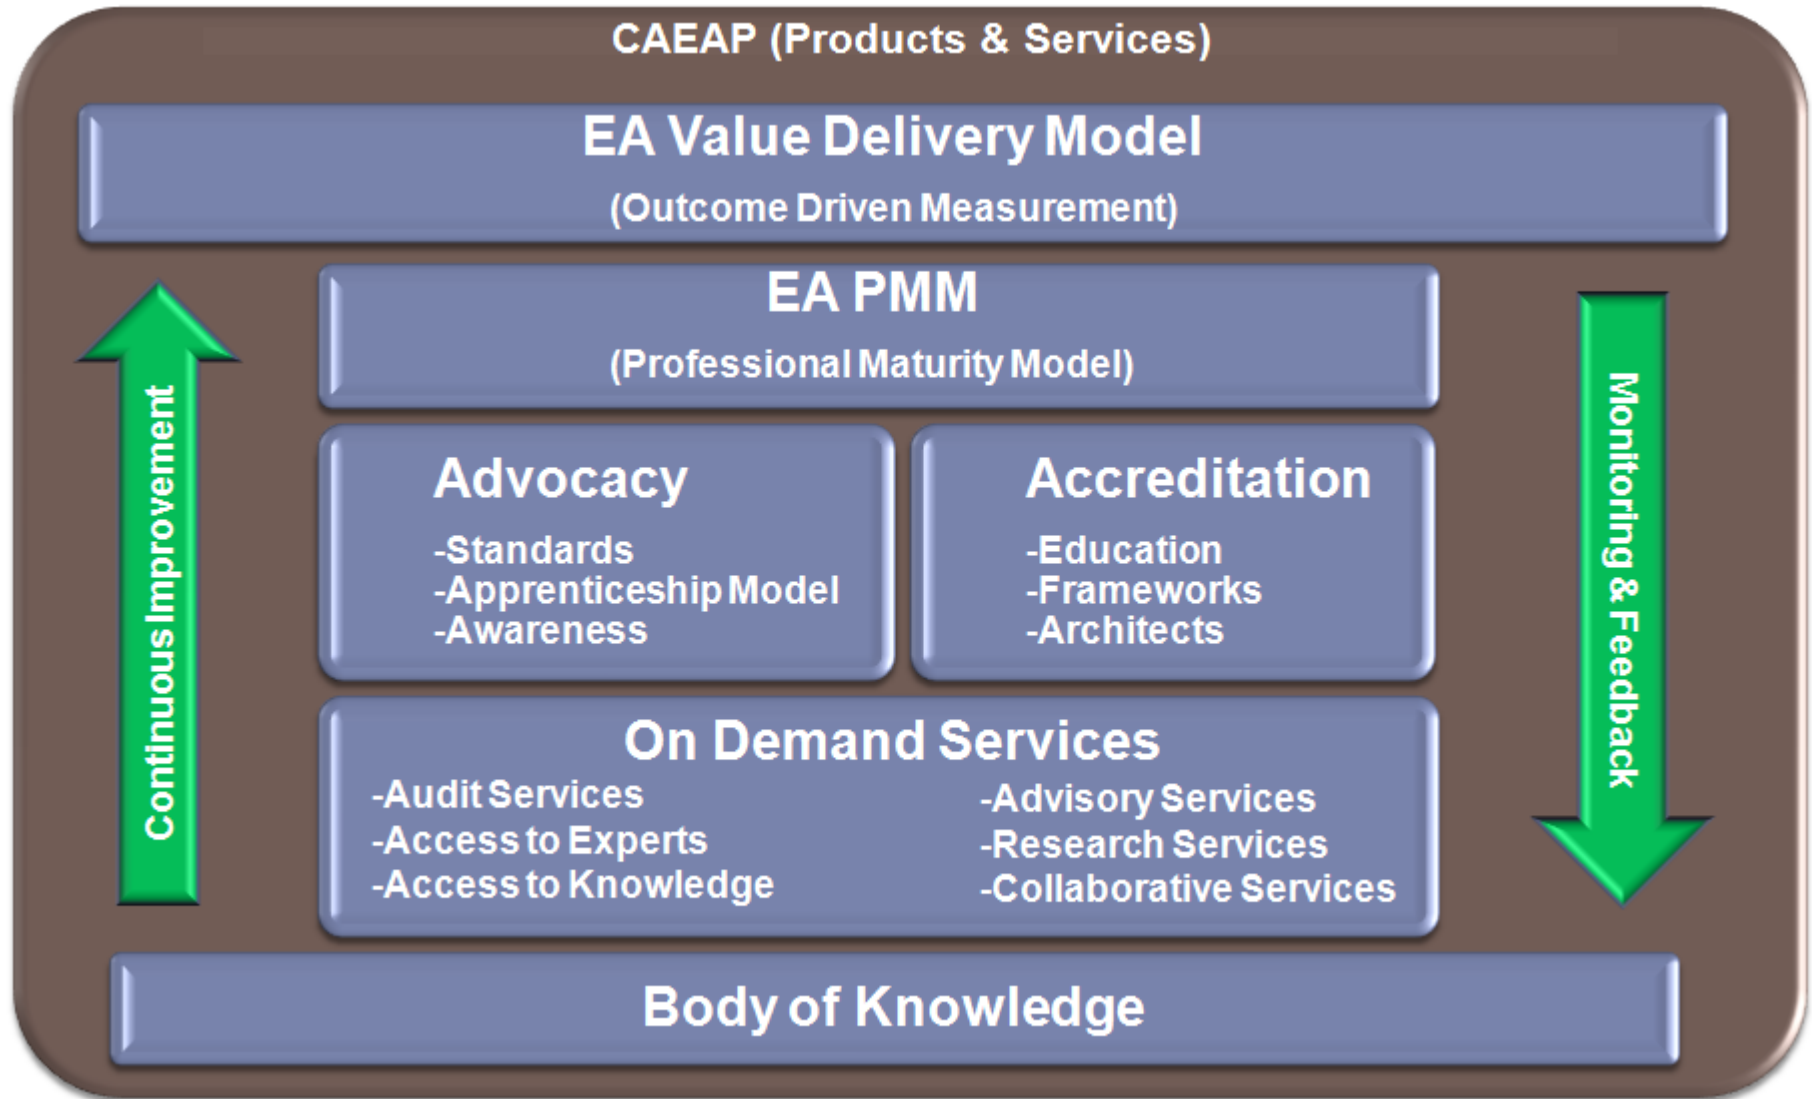

Goals for a Unified Delivery Model

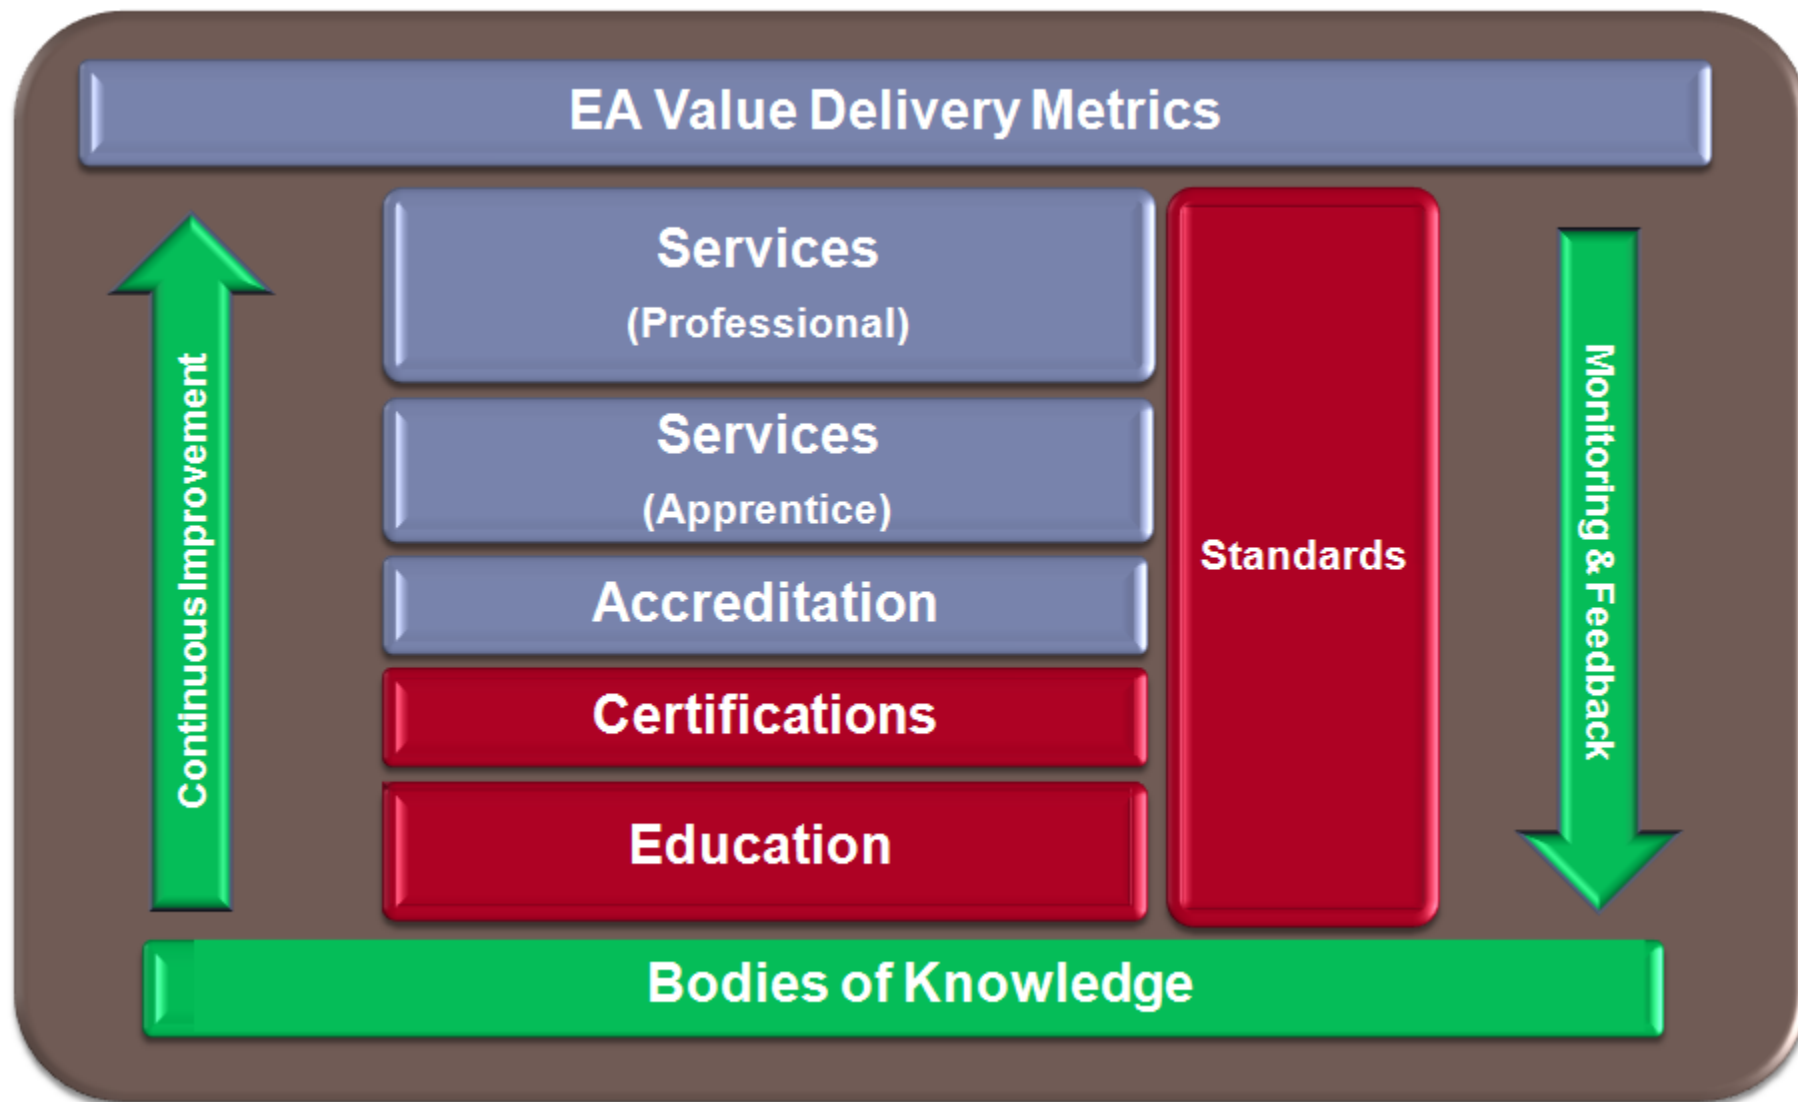

- Consolidated vision for CAEAP, the practitioners (not necessarily member..yet), the public (institutions, standards organizations, public organizations, and governments) for building an EA profession.
- Ensure the standards and practices deliver the 5 rights for EA service delivery to customers and stakeholders:
 - Measureable Value
 - Consistent & Repeatable Value
 - Assurance of Sustainable Value
 - Simplified Business Model
 - Agile & Extendible Infrastructure & Operations

CAEAP Value Delivery Model

EA Value Delivery Model

Overview of the Value Delivery Model

- The model is built on a progression of capabilities which are based on a clear understanding of the value that EA professionals need to deliver.
 - Those needs are captured as **Desired Outcomes** on the part of the customers (direct & indirect consumers) of the services provided by an EA Professional.
 - The **Desired Outcomes** provide CAEAP with a repository of intellectual property from which to offer a variety of services to the practice, profession, and the public.
 - The **Desired Outcomes** will be used to drive alignment, provide EA Professionals with a compass, and provide the baseline for driving continuous improvement.

Overview of the Value Delivery Model

- The **services** that EA's provide (whether as an apprentice or professional) are designed to address one or more desired customer outcomes.
- The **accreditation** builds on the education, experience, and certifications to distinguish the EA practitioner with professional responsibility and accountability.
- The **standards** ensure consistency and predictability.
- The **certifications** are designed to ensure EA practitioners demonstrate minimal levels of knowledge and experience.
- The **Education** is the basis of formal learning (combined with practical experience).
- **Continuous improvement & learning** are built into the Value Delivery Model.

Next Steps

- Mark Lane Review
- Board of Directors Review
- Meeting(s) to rationalize alignment per the model
- Meeting(s) to discuss positioning of Desired Outcomes to drive value measurement for EA Services.
- Actions Required

Services (Apprentice) Program

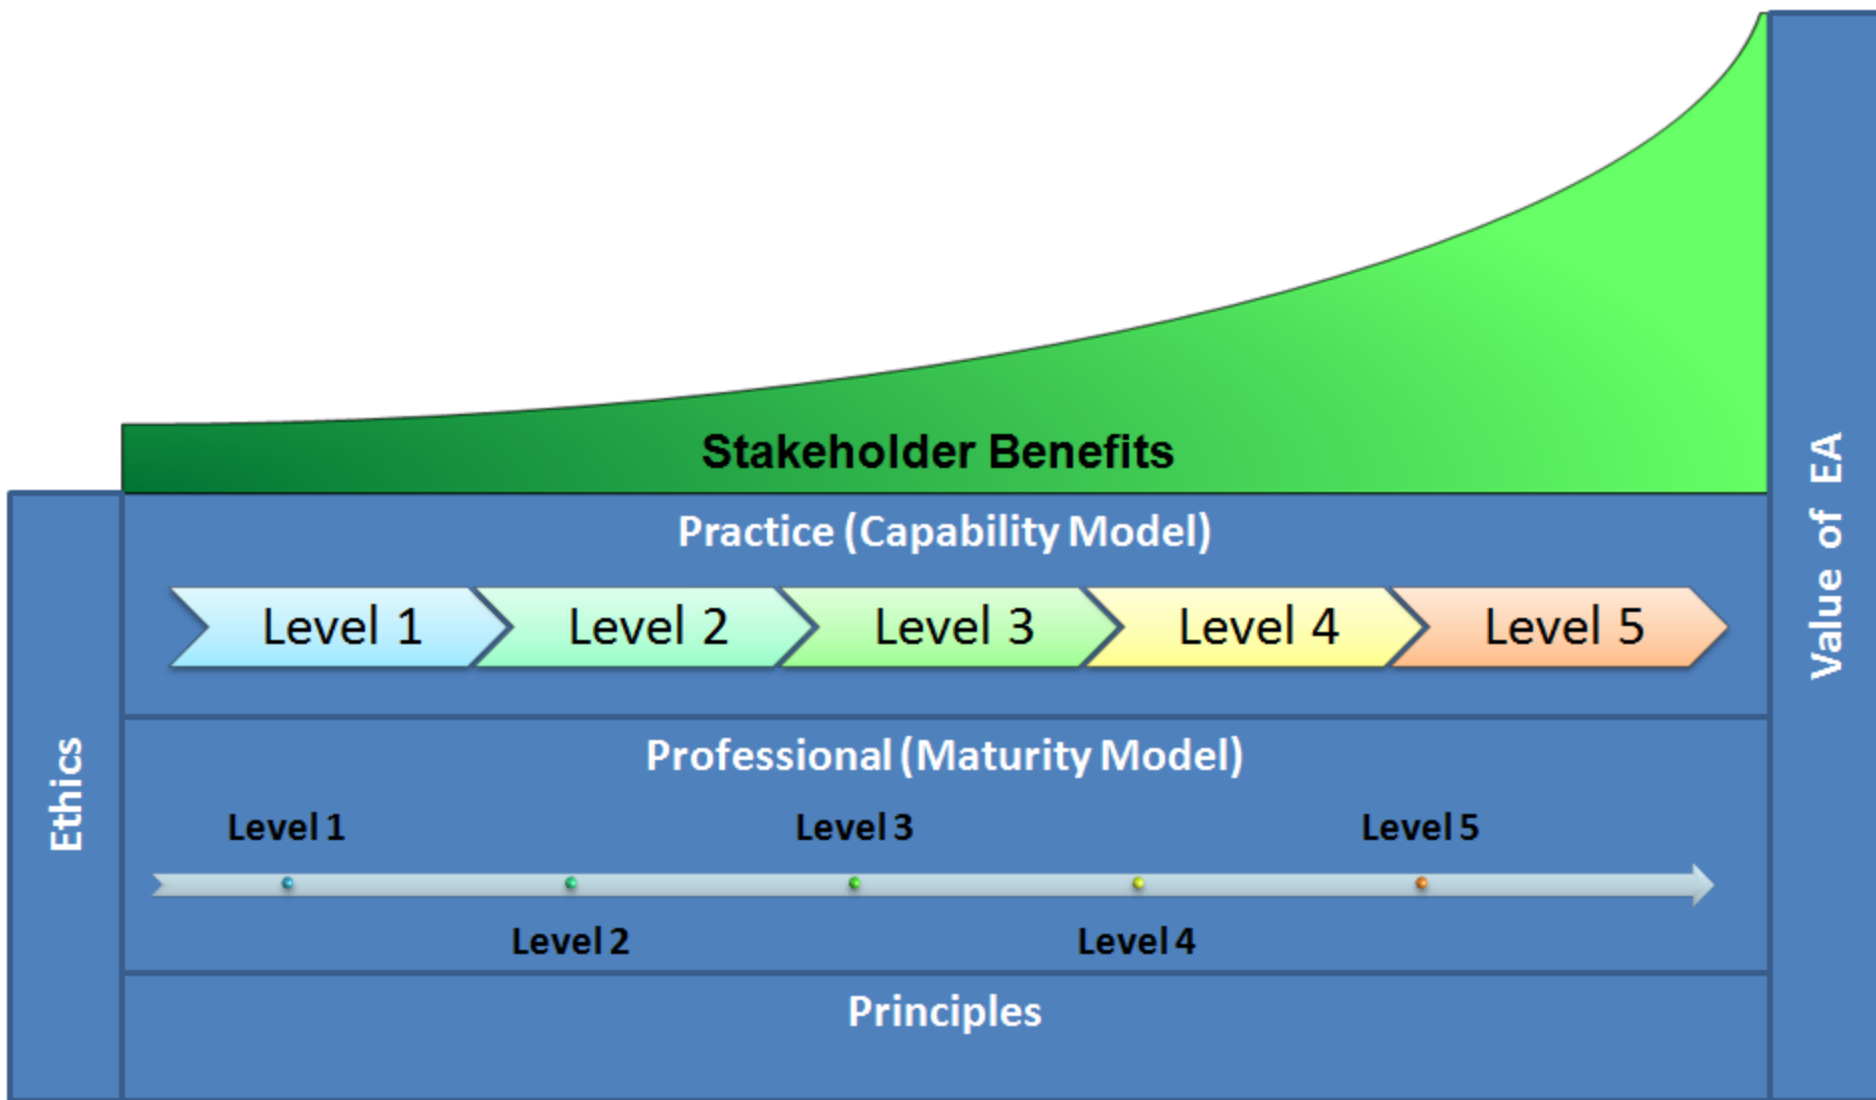

CAEAP Roadmap (5-10 yrs)

Enterprise Architecture Profession : Five – Ten Year Roadmap

	Today	Yr. 1	Yr. 2	Yr. 3	Yr. 4	Yr. 5	Yr. 10
Drivers	Inconsistency and Ill-relevancy reduced of time Enterprise Benefits The Enterprise evaluates the structural and investment impacts of market and strategy scenarios, and uses this knowledge to formulate and execute its business plans. The Enterprise conceives of, invests in and exploits structural innovations. The Enterprise creates and maintains structures, themes and spaces for its stakeholders to deliver value both for the Enterprise and themselves. The Enterprise combines existing operations with new investments, in a structure that best fulfills its obligations to stakeholders.						End State: EA Goals
Maturity	Developing Organized: The industry is recognized as a community and formalization begins Qualified: A qualification and accreditation regimen is defined and accepted Self-Governed: The industry is governed by a framework of professional institutions					Established Public: Obligations to the public are primary concern Statutory: The profession is governed by law for benefit of the public	
Core Components (maturity)	Standards of Practice - Professional Learning Framework - Industry Governance					Obligations to the public are primary concern The profession is self-governed and/or governed by law for public benefit (including: Education, Examination, Ethics, Experience)	
EA Profession Infrastructure	Code of Ethics: The Code is widely respected and adopted; the profession has mechanisms to discipline violators. Initial Professional Education: Curricula exist and reflect best practices; nationally accepted model curricula exist; model curricula are regularly reviewed and revised. Professional Development: Recognized career paths for enterprise architects exist; nationally recognized education and training guidelines and curricula are in place. Certification: Consistent certification in Enterprise Architecture; Nationally recognized certification standards provide consistency in certification of enterprise architects. Skills Development: Skills development mechanisms are in place and widely used (such as apprenticeships or Architect-in-training programs). Accreditation of Education: Accreditation guidelines are regularly reviewed and revised. Professional Society: Professional societies have appropriate range of products and services for enterprise architects. Body of Knowledge: An acknowledged body of professional knowledge exists, and is widely used; the body of knowledge is regularly reviewed and updated. Governance: Effective governance frameworks are established across the industry.					Branding: A sustained professional institutional branding program exists; the branding program translates into positive public and employer perceptions. Public Outreach: The professional institutions provide day-to-day communication with the general public. Legal: Legal responsibilities for EA professionals are identified and codified Licensing: Licensing is based on appropriate examinations; formulation of model statutes and examinations for the licensing of enterprise architects exist; EA is recognized as protecting the public in appropriate situations.	
Five and Ten Year Outcomes	- Qualifications are viewed as a single transparent regimen - Professional institutions operate the qualifications regimen - Professional core body of knowledge is defined and commonly agreed - Training, skills and assessment programs are defined for professional qualifications - Continuing professional development is operational - Professionals stay abreast of best practices - The registered enterprise architect framework is established - Code of ethics is adopted and compliance enforced - Professional societies offer wide range of valued products and services			- A body of knowledge rested on well-developed and widely accepted theoretical and practical base. - A system for certifying that individuals posses such knowledge before practice. - A system of certifying who possess both knowledge and the experience to practice effectively. - A commitment to use specialized knowledge for public good. - A code of ethics, with provisions for monitoring individual compliance.		- The profession evolves to reflect the concerns of the public - Professional society is advisory to society and produces regular reports to the public - Practitioner independence (overrides employer, competition, etc) is promoted by the professional society - Professional society becomes professional owner for society - Some or all of the industry are governed by professional institutions and defined by legislation - Work within the industry is reserved by statute	

Year 5

EA Professional Maturity Model

CAEAP: PPG (Chapters 1-5)

Chapter 1: The Profession of Enterprise Architecture

- Enterprise Architecture as a Profession
- Professional Preparation
- Standards of conduct and practice for professionals across the profession
- Ethics and Professional Responsibility
- Legal Responsibilities

Chapter 2: Standard Enterprise Architect Competency Framework

- A common comprehensive competence architecture is developed which maps knowledge, qualifications, skills, performance standards and experience requirements against a complete set of roles and, where possible, standard job specifications within the EA profession.

Chapter 3: Accreditation Standards for EA Frameworks and Methodologies

- The purpose of the accrediting frameworks and methodologies is to ensure consistency, relevancy and fit for stakeholder purpose; within the Enterprise Architecture Profession.

Chapter 4: Standards for Recognized Professional Qualifications

- Professional status within EA is based on a limited set of recognized professional qualifications with a single, registered professional qualification for EA practitioners representing the Registered Enterprise Architects (REA).

Chapter 5: Getting established in an Enterprise Architecture Practice

- Personal Goals
- Professional Options
- Creating a new Enterprise Architecture Practice
- Advice and Council

CAEAP: PPG (Chapters 6-10)

Chapter 6: Growing Your Practice

- Practice Organization and Management

Chapter 7: Standards for Accreditation in Education

- Accreditation refers to the acknowledgement and acceptance of Enterprise Architecture certifications and Universities that teach Enterprise Architecture. This is based on both aligning with the oath, doctrine, accepted definitions and concepts of the enterprise architecture profession. Three things will be developed; (1) a process by which a university or certification body receives accreditation, (2) criteria for how each one is accredited, and (3) examples of each scenarios for accreditation.

Chapter 8: Professional Registry for Enterprise Architecture Professionals

- The Registered Enterprise Architect brand
- Reaching critical mass of registered Enterprise Architects
- Professional titles

Chapter 9: Enterprise Architecture Branding and Marketing

- The maturity of a profession can be characterized by sustained professional institution branding
- This naming carries through into public and employer perception.
- Registered Professional is vital in increasing aspirations and attractiveness of EA to the young and society.

Chapter 10: Awareness and Recognition for EA Professionals

- Promoting and selling strategies
- Professional status is the major differentiator for individuals in EA.
- EA professionals hold a recognized professional qualification and registered status is the normal aspiration of new entrants to the profession.
- EA professionals have a clear personal responsibility, recognized by customers and the wider community, respected by employers and supported by professional institutions.

CAEAP: PPG (Chapters 11-18)

Chapter 11: Written Examination Above and Beyond Certification Requirements

- Compared with established professions, the EA professional institutions are seen as easy to join; registered status is relatively easy to attain. Entry into other professions involves written examination.

Chapter 12: Develop and Advocate Legal Frameworks

- Legal frameworks are in place to a varying extent across other established professions.
- For law and medicine a statutory framework spans the professions, whereas for accountancy the legal requirement only covers audit and investment advice.
- There are many statutory requirements in HR but not at an individual professional level, and similarly health and safety regulations apply to civil engineering.

Chapter 13: The Role of Apprenticeship in Enterprise Architecture

- Becoming a Master EA
- Guidelines for Establishing an Apprenticeship Program in the Workplace
- Locating and Requesting Apprenticeship Under A Master EA
- Comparing Apprenticeship with Certification

Chapter 14: EA and Innovation

Chapter 15: EA Education and Certification

Chapter 16: Enterprise Architecture and It's Relationship with Other Architecture Streams

Chapter 17: Reserved

Chapter 18: Enterprise Alignment & Business/IT Alignment; Enabling Corporate Management Decisions
