

CAEAP PPG CHARTER

1) Background

As an advocacy group, our overriding agenda is the enterprise architecture profession itself. We seek consistency and relevancy in the practice and, the Professional Practice Guide is yet another step on the stairway towards enterprise architecture professionalism. Simply put, it is in every enterprise architect's best interest for the Professional Practice Guide to succeed. Being an enterprise architecture professional means commitment to all stakeholders within the practice, public and profession. Commitment to the profession means getting involved in a workstream such as this and, upholding the values and duties for the profession and practice amidst challenges from those who are less open-minded, unwilling to change, or simply unaware of the need for this guide (notwithstanding the external factors such as time, cost and resources). Furthermore, a professional recognizes the importance of continuing education to stay abreast of best practices, new knowledge (domain & technical) and to share knowledge amongst peers and potential members of CAEAP as the EA industries' knowledge of the practice and, demonstrates what a professional enterprise architect can attain as the profession continues to evolve and mature. . Ongoing participation by professionals is foundational as we declare ourselves to the public as a unique profession and, protect our right to practice enterprise architecture in correct ways.

2) Workstream Description

The PPG workstream delivers a foundation of information important to the overall study of the profession and how it functions to ensure professionals are providing stakeholders with optimal value. It will present information that defines enterprise architecture as a profession and why the study of professional practice is important. Knowing how to setup and run a practice is crucial to making the time spent in the career a meaningful commitment rather than an ordinary job.

This PPG workstream embodies development of Enterprise Architecture foundation material for both EA Practice and EA Profession; it clarifies the purpose of EA, and establishes a basis for enterprise architects to mature as professionals. The PPG workstream aspires to define an ideal reference state for practitioners to follow and be held accountable to.

The expected outcomes of the PPG workstream include, to:

- Drive Good Enterprise Architecture Practices* (GEAP) in a consistent manner;
- Strengthen the identity of the Enterprise Architect Professional;
- Provide differentiation between EA and other professions;
- Engender consistency and relevance for the practice.

3) Rationale

A faster, leaner marketplace that is increasingly competitive and cost aware requires professionals who have specialized skills and who have expertise with cohesively bridging strategic, operational, and technical elements. Enterprise Architects fulfil this requirement. Applying advanced knowledge, demonstrated leadership, professional practices, and well-honed skills, they establish trust and transparency through accountability for sound judgment.

Such capabilities can only be developed through mentoring, experience and training across multiple disciplines and goes beyond the typical undergraduate education, reflective practices, and autonomy in architecting an enterprise. Consistent practices within the profession provide this lynchpin. Enterprise Architects deliver value by maintaining awareness of the public impact of their work while fulfilling the needs of the enterprise through their architecture.

4) Goals

The Enterprise Architecture Professional Practice Guide is being created as a leading enterprise architecture practice document for enterprise architects to advance their own practices, as well as forming a crucial reference set of information for educators. The purpose of the guide is to help enterprise architects build and enhance their practice. Furthermore, the guide will be utilized in the Registered Enterprise Architect exam preparation and will cover a range of ethical, legal, financial, management, marketing and administrative issues.

The general goal of the Enterprise Architecture Practice Guide is to deliver a practice guide targeted at standards in practice and serves the needs of all stakeholders; including the public, practice and profession. Some general themes are as follows:

- Deliver a practice guide that establishes a basis for standards of education which are necessary conditions of professional competency needed for entry into profession
- Deliver a practice guide that defines professional rules and standards for enterprise architecture that are necessary to protect and benefit the public
- Deliver a practice guide that documents the process and procedures for disciplinary action with the profession which includes public reporting and, if necessary, expulsion from registries should ethics, rules, and standards not be observed or if work is not finished in a professional manner.
- Deliver a practice guide that describes what consistent leadership means and is required for public acceptance of the enterprise architecture profession.
- Deliver a practice guide that determines the level of regulatory and self governance for the profession of enterprise architecture

5) Objectives (milestones)

- Create a functional and productive authorship team and kick-off August, 2009
- Chapter-units, all abstracts due by September, 2009
- Chapter-unit, consensus and commitment by October, 2009 (e.g. chapter go or no-go)
- Chapter-units, all chapter outlines due by November, 2009
- Chapter-units, outline consensus and commitment by December, 2009 (e.g. chapter go or no-go)
- Release composite first draft for Executive Steering Committee review by March 1, 2010
- Release composite second draft for Executive Steering Committee review by June 1, 2010
- Release composite third draft for Executive Steering Committee review by September 1, 2010
- Release composite fourth draft for Executive Steering Committee review by December 1, 2010

b) General Limitations: contributors will follow these rules

- Individual names and companies are not mentioned as part of the Guide except where relevant to the history of the profession. In such cases, names are only mentioned for historical continuity and not based on contribution.
- Each chapter is a multi-person effort. No one part of the Guide is developed by one person.
- Each chapter has Contributors and an Editor. The Editor is responsible for determining the material is presentable to the general organization.
- Content in each chapter is bound to the chapter's topic.
- Frameworks are only mentioned as examples.
- Details of any framework are not part of the Guide.
- Each part of the Guide must show continuity with the other parts of the Guide.
- The Guide must not contravene the principles of the Doctrine.

- Tools are not part of the Guide.
- The Guide represents the profession as a collective body and not any one individual's vision of the industry.
- Authors of the guide are mentioned by CAEAP and while it may be acknowledged that they are working on the Guide, such identification is not an advertisement for their services outside of specific guide work.
- The Guide, during its pre-publication is confidential. Information during this stage should only be shared with the Board of Directors' approval.
