

FEAPO Priority Action Plan: Roadmap for the Profession of Enterprise Architecture

Rationale: Need/gap

As FEAPO comes together as a federation of professional groups dedicated to the advance of Enterprise Architecture, a roadmap is needed to guide the cooperative activities of its members.

Abstract:

FEAPO's initial work efforts need to be put into the context of a roadmap that shows the incremental development and/or adoption of artifacts to establish a cohesive set of the elements common to the EA profession. (See Appendix A for the model of IT professions developed by the IEEE Computer Society.) From this, this group will elicit more detailed requirements from FEAPO members and derive a draft roadmap of activities for FEAPO membership over the next two years for review and discussion at the Sept meeting.

Description:

Based both on the incipient maturity model proposed by CAEAP and the model of a profession developed by the IEEE Computer Society, this project will propose a high-level path for putting the elements in place in an order that will provide evolving maturity to Enterprise Architecture as a profession. The roadmap will focus on deliverables, provide examples of areas where FEAPO members have already made significant progress (if an entire inventory of member artifacts is not yet available), designate milestones needed to achieve delivery of the elements, and supply date ranges for the deliverables. It should be noted that the roadmap is intended to serve as a basis for discussion among FEAPO member organizations, out of which will come the actual "marching plans" for FEAPO collaborative efforts.

Objectives:

Key organizations that are stakeholders in the evolution and recognition of Enterprise Architecture as a profession have come together under the FEAPO banner to work cooperatively to achieve consensus about the constituent elements of an EA profession.

Research has shown that recognized and respected professions require the following elements:

1. Guide to its Body of Knowledge
2. Code of Ethics
3. Standards of Practice
4. Competency Definitions
5. Career Paths
6. Curriculum model
7. Preparatory Education
8. Accreditation criteria
9. On-going professional development
10. Certification/External Validation

In addition, as a profession establishes itself, it engages in activities that foster communication between its members and between the profession and the public. Some examples are:

1. Publishing a journal
2. Maintaining a registry of its members
3. Public outreach
4. Branding
5. Guidelines for professional practice

Although several of FEAPO organizations have already prepared artifacts that could be candidate elements, we need an agreed path for selecting and/or creating a consistent and cohesive set of elements supported by our stakeholder organizations and embraced by practitioners. This is essential to our overarching goal: Provide a single face for the profession in order to enable its maturation.

Why:

An agreed roadmap will provide the basis for determining and prioritizing FEAPO and FEAPO member activities and for allocating resources to those efforts over the next two years with the goal of maturing the profession of Enterprise Architecture. It will enable:

- Stability and consistency in project efforts
- Streamlined effort through elimination of duplication
- Faster progress and better end products through collaboration

Where:

This effort provides the initial roadmap.

How:

Resources:

1. The co-chairs will recruit participants from FEAPO organizations through the appropriate delegates
2. Bi-weekly Conference call hosting by project members
3. Web collaboration site hosting by project member(s)

Activities:

1. Agree high-level requirements for elements of the profession (e.g., what are the requirements for a BoK? For a competency framework?)
2. Solicit existing artifacts from FEAPO organizations for evaluation.
3. Identify “holes” – missing elements
4. Evaluate existing artifacts using the criteria agreed above.
5. Identify external artifacts that might be candidate elements or contribute to the creation of the missing elements.

Who:

The project will be co-chaired by CAEAP and IEEE CS delegates. Additional members will be recruited from FEAPO members who wish to contribute.

The roadmap will be controlled and maintained by the FEAPO Board of Directors or those delegates that it designates. Similarly, the Board, as part of its oversight activities, will

assure that member and affiliate organizations align with the roadmap in any activities that produce roadmap elements.

**When:**

PAP approval	August 15, 2011
Project team invitation distributed	August 8
Bi-weekly team meetings commence	August 12
1 st [partial] draft ready for team review	September 1, 2011
1 st draft distributed to delegates	September 28, 2011

Appendix A: IEEE Model of IT Professions
