Introduces
Leadership in the Enterprise Architecture Profession**

Developing Executive-Level Leadership for the Enterprise Architecture Community

A unique program exclusively offered by <co-branded program>

The goal of enterprise architecture is to design and implement the structures that link a company's strategy with its execution. This vital link captures the corporate strategy as blueprints that include enough guidance and detail for the various parts of the organization to execute while allowing sufficient innovation for groups to be competitive. Specialized practices are used to determine where the company is today, scenarios for where it will be tomorrow, and the roadmaps that lead from one stage in the journey to the next.

Note: <the actual brochure will have sexy background>

Ruth,

Thanks for the nice words . . . Just and FYI thought . . . I'll admit the "leading the business" was a we bit self-serving. At work we are currently filling in our annual objectives. My "Corporate Competencies" are dictated by HR, these one's below are lifted exactly as they are stated and I am being held accountable against these.

Do I have to perform all of the "Leading the Business" Competencies . . . only if I want to keep my job ;-)

Is this all there is to know . . . obviously not ;-) My personal Competencies are also required ;-)

Take care and see you next week!

Introduction:

Leadership in the Enterprise Architecture Profession (LEAP) is an exclusive opportunity designed for chief enterprise architects who wish to operate at the executive level and maximize overall performance of their business. Participants will enhance their ability to plan and execute sound investments and minimize business risk, while coordinating strategies and structures for better business results.

Enterprise architects provide the critical structures that enable transformation of strategy to execution. It could be an impending merger, new business capability, new operational model, or strategic initiative. This requires a level of executive maturity that goes beyond functional excellence. How do executives lead a strategy of improving business results by formalising the enterprise's architecture, driving structural innovations and overseeing investments in change?

LEAP addresses a significant gap in the industry today by equipping leaders with the tools and training to do this:

- Combining existing operations with new investments, in a structure that best fulfills the enterprise's obligations to its stakeholders
- Creating and maintains structures, themes and spaces for stakeholders to deliver value both for the enterprise and themselves
- Conceiving of, investing in and exploiting structural innovations
- Evaluating the structural and investment impacts of market and strategy scenarios, and using this knowledge to formulate and execute business plans

Program Objectives:

The LEAP program is a leading-edge development opportunity designed for executives who are challenged to optimize the performance and success of their organization. It covers all aspects of enterprise architecture—from strategy and structure issues to those surrounding external alliances and partnerships. This program will help you better design, plan, and implement strategies and structures that delivery better business results.

Program Benefits:

LEAP is the answer to a critical need in the marketplace and fills a career path gap for executives. LEAP is professional development program targeted at senior level experts who need to develop the skills required to lead large transformation efforts. This unique professional development program consists of multiple sessions where members of the program work with leaders in the enterprise architecture community. Join this program if you aspire to:

- Grow the Enterprise Architecture capability of your organization
- Attain a better grasp on how to handle Enterprise Architecture challenges at the executive level
- Increase competitive positioning in being hired as a professional Chief Enterprise Architect
- Presenting a career milestone to management that you are ready for more responsibility

Each participant will understand the ways that strong enterprise architecture adds value to the organization. Participants will also come away with answers on how to:

- Create an effective enterprise architecture capability to drive higher value
- Formalize a common enterprise architecture vision between lines of business
- Gain insight into far-reaching economic, business and technological changes that are transforming inter-business relationships
- Define and design complete enterprise strategies and architecture
- Create processes for the management and governance of business strategy
- Understand the value and execution of enterprise portfolio management
- Implement key disciplines of enterprise-level decision making and planning
- Ensure enterprise leaders experience the true value of enterprise architecture

Roundtable Issue Sessions:

Each session features a roundtable discussion where participants can bring their own workplace challenges to the forum for open discussion and solutions. Past participants have acclaimed this as a “great opportunity to get views from academia, government, and industry on EA in today’s world” and “invaluable to add to the understanding of all that was presented earlier.”

Graduating LEAP:

You will earn a place on the Enterprise Architecture Registry. The Registry provides recognition to an individual who has met the basic educational requirements for the profession – and LEAP fulfills one of those requirements. CAEAP maintains the Registry as a method to:

- 1) Provides non-EA leaders with recognition of architectural understanding, foundational skills, and enterprise leadership capabilities
- 2) Recognizing executives who have gained an understanding of the profession
- 3) Accredited enterprise architects and those on the path to becoming a registered enterprise architect

Who Should Attend?

LEAP is an executive level professional development program designed for executives who wish to succeed as a Chief Enterprise Architect and beyond.

- New to being a chief EA or looking to become one
- Senior person with business background coming in to serve as chief EA
- Senior EA positioning for recently promoted/hired to chief EA
- Already an experienced chief EA, looking to tune up strategic leadership skills and step up to the executive table (and get on the registry)

Facility:

Each instructor has an extensive background in working as enterprise architects, leading enterprise architecture group’s within large organizations, research, consulting, and in educating executives. Each brings to the classroom best-practice tools and implementation processes for achieving world-class results.

NEED A QUOTE: “This program is very much needed for most companies to establish an effective and continuous connection between strategy and effective initiatives is key to success—and in many cases survival— for most organizations.”
