Functional Jobs (Core, Direct, & Indirect)

Job Executor: Manager of Equipment Maintenance in MFG Ops

- Monitor equipment
- Analyze data
- Create action plan
- Replace equipment
- Repair equipment
- Source new / alternate vendors
- Anticipate failure
- Install equipment
- Maintain equipment
- Calibrate equipment
- Move / Relocate equipment
- Train staff on equipment maintenance

Reference Model for Job Maps

Job Study

Core Functional Job: Steps & Outcomes (projected)

Job Executor:

Manager of Equipment Maintenance in MFG Ops

Core Functional Job:

Monitoring equipment in MFG Line (train)

Job Steps:

- Identify the equipment to monitor and contextualize scenario
 - Outcome: Increase the likelihood that job executor has identified the right equipment to monitor
 - Outcome: Increase the likelihood that the scope of product line impacts are known
 - Outcome: Increase the likelihood that the location of the mfg facility and mfg line (train) are known
 - Outcome: Increase the likelihood that the scope of orders and customers impacted by the mfg line (train) are known
- Identify issues and clarify root cause problem(s)
 - Outcome: Increase the likelihood that the causal factors resulting in one or more issues have been identified
 - Outcome: Increase the likelihood of discovering known problems and/or contributing factors can be found in existing knowledge repositories and online sources
 - Outcome: Increase the likelihood that patterns of problems can be identified in other mfg lines (trains) in other mfg facilities
 - Outcome: Increase the likelihood that patterns of problems are uncovered across a multitude of issues (suggesting a cascading effect)
 - Outcome: Increase the likelihood that the nature of the problem can be classified:
 - Isolated or Recurring
 - Exception or Episodic
 - Random or Temporal / Causal
- Gather Data & Information about the problem

Job Study

- Outcome: Increase the likelihood that relevant data can be obtained from equipment logs
- Outcome: Increase the likelihood that performance data for equipment is available and easily accessible
- Outcome: Increase the likelihood that data about the equipment is properly secured
- Outcome: Increase the likelihood that data about the equipment is of high integrity (quality, correctness, timely)
- Outcome: Increase the likelihood that benchmark data from same or similar equipment is available and easily accessible
- Outcome: Increase the likelihood that control chart data from vendor is available
- Generate performance & quality reports
 - Outcome: Increase the likelihood that equipment performance reports can be generated and provide meaningful insights
 - Outcome: Increase the likelihood that equipment quality reports can be generated and provide meaningful insights

Job Study

Core Functional Job: Steps & Outcomes (projected)

Job Executor:

Manager of Equipment Maintenance in MFG Ops

Core Functional Job:

Analyze Data for Equipment in MFG Line (train)

Job Steps:

- Step 1: Analyze data, clarify problem
 - Analyze equipment performance
 - Analyze vendor performance
 - Analyze impact on key stakeholders (Int & Ext)
 - Analyze impact on current state operations (PPT)
 - Analyze impact on future state operations (PPT)
 - Analyze impact on strategy (YTD)
 - Analyze impact on strategy (LT)
 - Analyze impact on change portfolio(s)
- Step 2: Assess Impact of problem(s)
 - Assess impact on other problems / issues
 - Assess impact on product lifecycle
 - Assess impact on customers
 - Assess impact on product
 - Product family
 - Product line
 - Product lifecycle
 - Assess impact on operations
 - One plant
 - All plants
 - Assess impact on operations (functional areas)
 - Inventory Management
 - Procurement
 - Quality Assurance
 - Quality Control
 - Finance

Job Study

- Contract Management
- MFG Technical Support
- MFG Operations
- Human Resources (Training)
- Compliance (certification of staff, equipment, operations)
- Assess impact on key stakeholders (Int & Ext)
- Assess impact on strategy (YTD)
- Assess impact on strategy (LT)
- Assess impact on change portfolio(s)
- Step 3: Identify options to address issue with equipment
 - Do nothing
 - Repair (break / fix)
 - Replace (asset, vendor, both)
- Step 4: Decide course of action
 - Repair equipment
 - Replace equipment with new asset (same version)
 - Replace equipment with new asset (different version)
 - Replace equipment with different asset
 - Replace vendor and asset
 - Replace asset in single instance
 - Replace assets in all instances (mfg lines)

Job Study

Core Functional Job: Steps & Outcomes (projected)

Job Executor:

Manager of Equipment Maintenance in MFG Ops

Core Functional Job:

Create Action Plan for Equipment in MFG Line (train)

Job Steps:

- Action Plan
 - Draft action plan to execute decision
 - Determine impact of actions (incrementally and collectively)
 - Draft business case, recommendation, and budget estimate
 - Review business case, recommendation, and budget with Finance & Procurement
 - Obtain approval for action plan
 - Coordinate action plan with all key stakeholders (int & ext partners)
 - Determine if action plan requires program management oversight
 - Manage change using change management lifecycle
 - Conduct Lessons Learned at close of Action Plan
- Close Out & Resume Monitoring
 - Close out original issues
 - Update monitoring procedures
 - Update data gathering to optimize insights
 - Resume equipment monitoring

Job Study

Core Functional Job: Emotional & Spiritual Jobs:

Emotional Jobs:

- Perceive self as knowledgeable
- Avoid stress
- Avoid feeling overwhelmed
- Perceive self as competent
- Perceive self as important
- Feel respected amongst staff
- Feel appreciated by management
- Feel valued by organization
