

The Federation of Enterprise Architecture Professional Organizations (FEAPO)

**Updated Board Proposal
December 2015**

Current State Assessment

- No viable revenue stream
- Value proposition for FEAPO is primarily perceptual **1**
- Value Streams have not been clearly articulated **2**
- We have defined an organization roadmap, but we have never defined and vetted a set of Products & Services
- We are unable to produce an annual report of activities (results, financial position, and future plans).
- Our current plan for addressing the above concerns is to find a successor for the outgoing president (and founder).

- 1. It will remain perceptual UNTIL member organizations agree to pay monies up front to remain as members**
- 2. Glossary and Career Guide are work group activities**

Future State

Scenario 1 (Maintain Status Quo)

- Maintain current slow response to organizational needs
- Lack of focus on quality of deliverables.
- Lack of enterprise focus is creating another IT-centric organization

Future State

Scenario 2 (Corrective Action to Secure Funding)

- Appoint a new president. Have the president approach each of the existing member organizations and ask for money.
 - \$5,000 from Tier 1 organizations (large)
 - \$3,000 from Tier 2 organizations (medium)
 - \$1,000 from Tier 3 organizations (small)
- Next, we'll need to draft a strategic plan for using this \$40,000 budget:
 - Can't make a profit, so we'll have to ensure we spend it or reserve it properly
 - Need to demonstrate financial due diligence and can deliver value to the FMOs
 - This first year is a big test for FEAPO to ensure its survival (Year 2 and beyond will depend on the results we deliver with this budget).
- Assumptions:
 - Assume we get 75% support from all FMOs (perhaps we can raise in Year 1 about \$40,000).
 - Assume we deliver the goods with a strategic plan, we should be able to build upon this in subsequent years.

This is a draft - subject to further discussion

Future State

Scenario 3 (Proactive Plan for Driving Growth)

- Appoint a new president
- Under the sponsorship of the President, convene a task force of individuals (within FEAPO and beyond) to develop an Enterprise Renewal Strategy.
 - Identify where architecture is being practiced (all verticals, and in what manner is architecture formalized as a discipline and where it is not)
 - Use the prior bullets to redefine the mix of member organizations and individuals (need to address the needs of the institutions as much as the practitioners)
 - Identify gaps in architecture discipline, alignment, and integration and reset the FEAPO roadmap to address these areas as part of a more expansive value proposition for institutions and practitioners
- Ask if some of these individuals would consider joining the FEAPO board or perhaps serve as a Board of Advisors to FEAPO to meet with the BoDs on a periodic basis (TBD) to validate the roadmap and provide ongoing guidance on topics and opportunities (TBD)

Future State

Scenario 3 (Proactive Plan for Driving Growth)

- Develop a marketing and communications plan with advisors (marketing & sales experts) to promote the new direction for FEAPO to institutions and individuals
 - Develop and articulate the value proposition (products & services)
 - Expand membership opportunities to organizations and individuals who are both passionate and interested in formalizing, standardizing, and integrating architecture across one or more domains and disciplines to address their enterprise concerns
 - Develop a more inclusive participatory model (open to anyone who wishes to join FEAPO as an institution, organization, or individual practitioner of architecture) with a complimentary revenue model based on size, participation, and collaboration (where annualized fees are adjusted based on participation and sharing)
- Assume we establish an initial revenue baseline, identify a core set of resources that we need to bring aboard (staffing plan) to enable the year 1 roadmap (strategic plan)

Future State

Scenario 3 (Proactive Plan for Driving Growth)

- Engage a subset of Business Architecture resources to align the strategic roadmap with the execution for the next 1-3 years:
 - Map out the value stream(s) required to deliver the products & services
 - Map out the capabilities and establish an initial heat map
 - Define the initial set of initiatives that need to get prioritized
 - Collaborate with the FEAPO Board to engage leaders from the membership to step forward and take on these initiatives, establish charters, and staff “teams” from the membership
 - Establish a PMO to plan and coordinate the execution of initiatives
 - Establish a Communications office (for internal & external needs) to promote the progress and roadmap, encourage participation, raise awareness, create excitement, and collaborate with the Marketing office (TBD)
 - Establish a Marketing office (perhaps a few individuals initially) to review / enhance the branding and positioning of FEAPO as the roadmap and communications evolve

All the above will rely (initially on a heavy dose of volunteers) with some seed money to support initial startup capabilities. The sustainability of the organization will dictate our ability to fund both expansion of these programs and permanent positions (staff).

Recommendation

- Scenario 3 (Proactive Plan for Driving Growth)
 - Provides a proactive plan for building a revenue stream
 - Defines a more inclusive model to secure stakeholder needs and their engagement
 - Provides a foundation for identifying and delivering the right value

Advisory Committee

Some “Initial” Thoughts on Participants

Individuals with...

- Design Thinking
- Pulse on the Future
- Keen insight on Architecture
- Expertise in one or more:
 - Transportation (incl. Aerospace)
 - Healthcare
 - Food Chain
 - Technology (computing, AI)
 - Finance
 - Communications

Thought Leaders from...

- IDEO
- Google / Singularity University
- Education Centers (all levels)
- Member Organizations
- Vendor Communities
- Security

Next Steps

- Approve the Recommendation or Another Option
- Identify Actions Required
 - What, When, & Who
