The Institute for Healthcare Measurement

Proposal

- The institute will be capturing desired outcomes from patients and practitioners across the healthcare continuum through a progressive series of studies that will be performed in across the country.
- The desired outcomes will be warehoused in a repository where they will be made available via online surveys for patients and practitioners to complete.
- The surveys will be capturing profile information from both to support dimensional analysis as well as to aid in cleansing and profiling survey data before it reaches the measurement repository.

Proposal

- Aggregated data and summarized results will be provided to subscription-based users to generate revenue. Additional data cuts, customized analytics, and actual data extracts will be made available for a premium fee to providers.
- Practitioners will be offered discounted rates (whereas providers and payers will pay in full) in an effort to bring down healthcare costs and because they are on the frontlines for delivering value to patients.

Patient Benefits

- Patients provide practitioners, providers, and payers with a way to measure the value of care by ensuring their functional, emotional, and spiritual outcomes are met across the continuum of care (beyond the hospital, into clinics, and into the home). Patients will also have access to healthcare information to make informed decisions about care they need to receive and assess the value of services they receive

Patient Services

- ValuePoints™ which provide patient-driven trends for desired outcomes in healthcare via online reports.
- ServiceValues™, which provides reports on how well providers and institutions address patient-driven values. Useful for comparison shopping for healthcare services.
- ProductValues™, which provides reports on how well products address patient-driven values. These reports will provide a patient-centric perspective on products that are evaluated against the value driven metrics for patients.
- Privacy Protection, which we consider the cornerstone of a viable relationship with patients (and consumers in general).

Practitioner Benefits

- Physicians, Nurses, Pharmacists, Specialists, and others involved in delivering care for patients will have access to key insights on desired patient outcomes for the services provide throughout the healthcare continuum. They too will also be able to take advantage of information to help guide their practices and decisions on products and services.

Practitioner Services

- PatientValues™, which provides practitioners with a clear understanding of the patient's desired outcomes to move beyond service and deliver a positive experience.
- ClinicalValues™, which provides practitioner-based desired outcomes to help promote the services that practitioners need from products & services that they consume to get their jobs done.
- ValueBenchmark™, which provides a way to reduce complexity for practitioners by allowing them to focus on value driven measures for patients to more easily navigate the numerous measurements (TQM, EBM, RDM, CDM), checklists and various rules used to deliver services to patients.

Provider Benefits

- Hospitals, Care centers, nursing, homes, insurers, drug manufacturers, device manufacturers, and other service providers who provide facilities, products, and services have access to key insights on desired patient and practitioner outcomes to help guide the development of their products & services.

Provider Services

- PatientValues™, which provides providers with a detailed listing of desired outcomes for patients useful in assessing their product portfolios and directing investments in new products & service in a much more precise manner. Provides payers with a way to develop a new benchmark for reimbursement (value-based versus results-based).
- ProductValues™, which guides purchasers of products with clear and unambiguous data for selecting the right products to help practitioners get their jobs done.
- ValueBenchmark™, which provides a way to review gaps in alignment between value driven measures for patients the numerous measurements (TQM, EBM, RDM, CDM), checklists and various rules used to deliver services to patients. Providers and payers will be able to target continuous improvements and guide their LEAN efforts with precision.

Management Team

Team Member	Background	Role
Jeffrey Wallk	Healthcare, Market Research, Enterprise Architecture	CEO, VP R&D VDM Practitioner
Marc D. Paradis	Medical, Data Architecture, Healthcare Analytics	VP Chief Science Officer VDM Practitioner
Diane Sahr, RN, BSN	Nurse Practitioner, Clinical Research	VP Clinical Research VDM Practitioner
Rick Gramatges	CTO, Software Architect Pioneer, e-commerce expert	VP, CTO
TBD	Sales & Marketing in Healthcare	VP Business Development
TBD (multiple)	Nurse Practitioner (Hospitals, Alternate Care Centers, Home Care)	RN, LPN VDM Practitioner

Value Proposition

- Our focus will be on providing clarity in the area of meaningful use. Our methodology will offer providers a very precise understanding of the desired outcomes that practitioners are trying to achieve with the jobs they are performing. The metrics can also be used to measure the value of devices, systems, and information which are currently being deployed in healthcare settings today.

Value Proposition

- Solution Providers will be able to quantify the meaningful use of their products & services and Healthcare Providers (hospitals, care centers, physician practices) will be able to leverage this information to justify reimbursement. Assuming we establish a foothold with Solution & Healthcare Providers, we can bring CMS aboard to adopt this approach as an emerging standard for measuring meaningful use over time.
