

Aligning Strategy with Execution

**From Customer Focus
To Effective Lifecycle Management**

Why change ?

- ❑ **Customers are shifting from a focus on mass-production (product-centric) to a mass- customization (customer-centric) view.**
- ❑ **Needs to align it's focus to a customer-centric view to keep pace and to extend it's reach into the more lucrative areas of the value streams of existing customers and their domains.**
- ❑ **The shift from a product-focused to a customer-focused company and the transformation begins by measuring the desired outcomes of customers (who buy products & services).**

How do we manage this shift ?

- ❑ But, we need to ensure that we deliver against the desired outcomes that we capture from an outcome-driven process.
- ❑ Our current portfolio management process is focused on products and features associated with the old model.
- ❑ We need to align the portfolio with a customer focus instead of a product or project focus in order to ensure we drive **value** instead of productivity.

What is this shift in alignment all about ?

Portfolio Mgmt. Today:

□ Projects

- Products
 - Requirements
 - » Features

Portfolio Mgmt. Tomorrow:

□ Domains

- Jobs
 - Core
 - Supply Chain
 - Emotional
 - Desired Outcomes
 - Use Cases
 - Features

- First, we'll take a top-down approach where we align features to address outcomes. The features must support one or more outcomes (in part or whole).
- Next, we'll take a bottom-up approach and build projects to address sets of features within one or more platforms (used to build products)

What is the impact on portfolio management ?

How does this dovetail into Execution ?

A platform x-ref view can help understand the shift

Technical Platforms	Value Platforms
