

Business Intelligence Roadmap

Stepwise Approach for delivering Business Agility

Overall Direction & Goals

From: Data-based Decisions

 **To: Intelligence-based Decisions**

☐ **Leveraging our investments**

- SAP
- Data Warehouses
- OLAP Tools
- Pre-Defined Insights and Reports

☐ **To build our future**

- Data Integration and Management Services
- On Demand Insights and Analytics
- Business Productivity Planning & Optimization
- Proactive Decision Making (Predictive Capability)
- Highly agile business (ability to seize opportunities to max. return)

-- Overall Goal --

Deliver increased value to our customers

Strategic Road Mapping

Overall Business Development Plan

❑ IT Client Perspective:

- Start aggressively mapping out a portfolio of business intelligence services that IT would like to begin offering.
- Review the portfolio and gain acceptance with the business on the concepts, value and investment direction.
- Create a strategic plan with scheduled delivery dates for these new services.
- Initially, we may want to front the business with IT specialists (RMs ?) who can define the upfront analytics and provide their clients with value-added intelligence until the new tools (automated services) are in place.
- Perhaps we can start with 1 or 2 business areas and transition them to the new service model and gather feedback from clients as we mature the new services.

BUILDING THE FRAMEWORK

BUILDING THE VISION

BI Vision Overview

- ❑ **Reduce cycle time for business decision making by an order of magnitude.**
- ❑ **Provide business decision makers (at all levels) with the following snapshot of WHAT is happening and the explanation of WHY & WHEN things have changed from the previous snapshot.**
- ❑ **Deliver real intelligence into the dashboards:**
 - Show WHAT is happening with metrics & KPIs
 - Show WHAT has happened using control charts
 - Show WHAT might happen using predictive analytics
 - Explain WHY exceptions & trends are/might happen
 - Show WHEN trend breaks and/or exceptions might occur
- ❑ **Eliminate the need for drill-down by business users**
- ❑ **Eliminate the need for massive amounts of near-line storage to maintain leaf level data.**

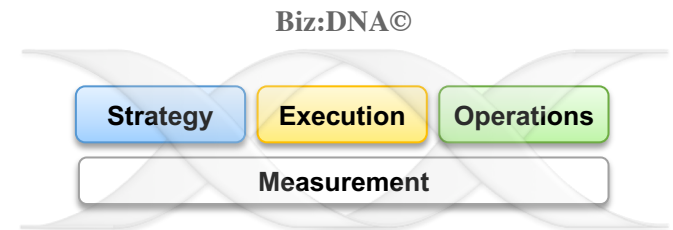

High Level Progression of Steps

- ❑ **Build an Enterprise Data Warehouse (EDW)**
- ❑ **Develop a Data Mining Framework (DMF)**
- ❑ **Develop an analytics framework for delivering a consistent view of Business Activity (WHAT, WHY & WHEN)**
- ❑ **Build an Enterprise Change Warehouse* to compliment the EDW:**
 - Mine the EDW for anomalies and capture causality in the ECW (internal change).
 - Incorporate 3rd party data sources to extend our view of environmental factors that can influence causality (external change)\
 - Populate the ECW with non-transactional causality data
 - Extend the transaction services to automatically capture causality data change in the ECW and associate with EDW
- ❑ **Extend the analytics framework to embed real intelligence into the dashboards to include the (WHY & WHEN).**

*** Separate logical model...may be separate physical model**

Thank You

Measure what matters
Create and deliver the right value
Build and nurture a winning culture
Proactively manage change & complexity
