Enterprise Architecture

Overview of EA

- ❑ The scope for Enterprise Architecture includes the 6 pillars of Architecture leadership that provides clear boundaries for the key domains within architecture.

- ❑ There are many “views” of what Enterprise Architecture encompasses and how to define the scope and deliverables. The above framework is a simple reference model which draws upon a multitude of “approaches” covering (DoDAF – uses FEA, TOGAF, Gartner, Zachman).

The 6 Architecture Disciplines

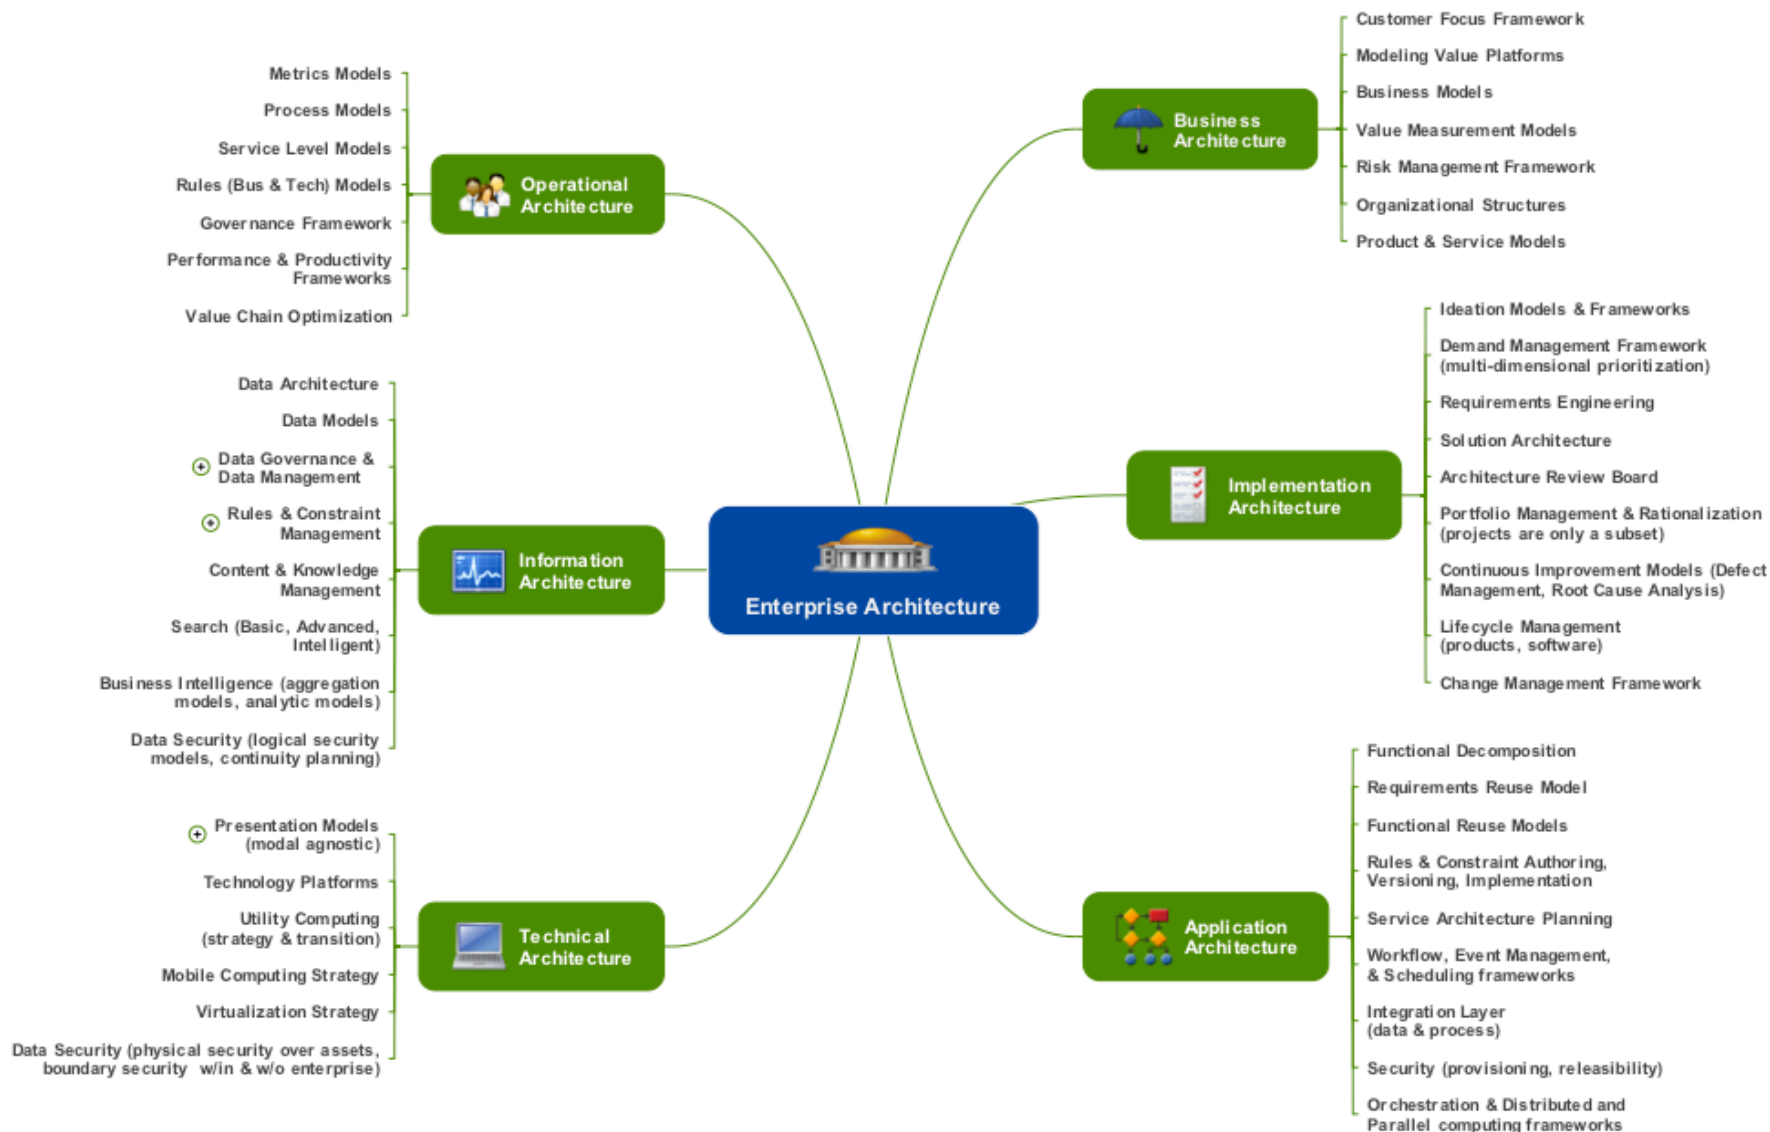

The 6 EA Disciplines Explained

Architecture Domain	Helps us address the following questions...
Business Architecture	• Do the core business & operational structures support the strategic goal ? • What do our customers want & how should we capture & mine this information ? • How do we align strategy with tactical execution ? • How do we measure value ? AND How can we platform value delivery ? • How do we leverage risk to drive the right decisions ?
Operational Architecture	• Are the functional processes, controls, and metrics aligned across the org ? • Are the x-functional operations properly modeled and aligned to enable the functional areas ? • Are service levels and metrics models aligned to support the internal & external needs ? • How do we ensure operations can adapt to business change in an agile manner ?
Information Architecture	• What are the information needs to support the operational controls and metrics ? • How do we manage the data quality and data security needs to address business risk ? • Do the data structures and logical models support the needs of the business & operations ? • How do we accelerate the “right” decisions across the value chain (not just mgmt) ? • Why do we need to manage the lifecycle of data and how do we impart governance ? • How do we become a “learning” organization (beyond managing knowledge) ?

The 6 EA Disciplines Explained

Architecture Domain	Helps us address the following questions...
Application Architecture	• How can we harmonize business rules & constraints across the enterprise ? • How do we ensure technology works for our customers (instead of the other way around) ? • How can technology be designed & implemented to drive business agility ? • How do we ensure IT & Business folks talk one language ? • What are the right technology platforms to support the value platforms for the organization ? • How do we build and/or source a set of reusable services used within & without UL ?
Technical Architecture	• How do we approach a virtualization strategy that optimizes corporate resources ? • How do we leverage virtualization to accelerate change management ? • What types of computing platforms and topologies will support growing information demand ? • How do we enable ubiquitous computing w/in the enterprise & w/o the extra-prise ? • How do we shape vendor relationships to enable flexibility while supporting sustainability ?
Implementation Architecture	• How do we align the multiple portfolios across the enterprise ? • How do we ensure execution enables strategy ? • How do we align customer needs, organization priorities, and requirements through design, build, testing, and delivery ? • How do we measure value delivery for customers (internal & external) with projects ? • How do we ensure we design, build and deliver products and services that meet the desired outcomes of customers ? • How do we ensure that technical platforms address the needs for value platforms ? • How do we optimize human potential (intellectual capital) in value delivery ? • How do we enable a culture driven by learning and continuous improvement ?

Sample Deliverables for the EA Disciplines

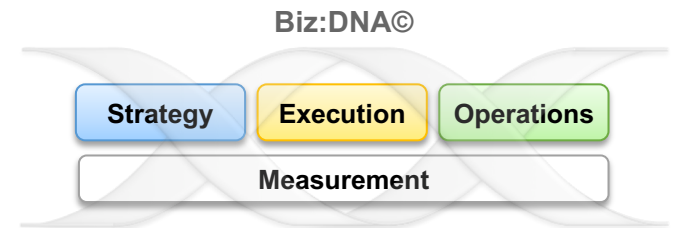

Some Common Patterns to know

- ☐ HRM – Human Resource Management
- ☐ EPM – Enterprise Portfolio Management
- ☐ BRM – Business Rules Management
- ☐ PLM – Produce Lifecycle Management
- ☐ RLM – Requirements Lifecycle Management
- ☐ EAM – Enterprise Asset Management
- ☐ ODI – Outcome Driven Innovation (precursor to RLM)
- ☐ SCM – Supply Chain Management
- ☐ SRM – Supplier Relationship Management
- ☐ CRM – Customer Relationship Management
- ☐ EcM – Enterprise Content Management
- ☐ BpM – Business Process Management
- ☐ BPM – Business Productivity Management
- ☐ ECM – Enterprise Collaboration Management
- ☐ EKM – Enterprise Knowledge Management
- ☐ EIM – Enterprise Integration Management

Thank You

Measure what matters
Create and deliver the right value
Build and nurture a winning culture
Proactively manage change & complexity
