

Linking ODI with Execution Mgmt

Proposal for revised portfolio planning/mgmt methodology

Why change ?

- ❑ We're embarking on a significant investment and shift from a product-focused to a customer-focused company and the transformation begins with the ODI methodology from Strategy.
- ❑ But we need to ensure that we deliver against the desired outcomes that we capture from the ODI process.
- ❑ Our current portfolio management process is focused on products and features associated with the old model.
- ❑ We need to align the portfolio with the new semantics driven by ODI if we are to realize the benefits of our investment.

What is this shift in alignment all about ?

❑ Today:

❑ Projects

▪ Products

- Features
 - » Sub-Features

❑ Tomorrow:

❑ Domains

– Jobs

- Core Jobs
- Consumption Jobs
 - Outcomes
 - » Features
 - » Sub-Features

- First, we'll take a top-down approach where we align features to address outcomes. The features must support one or more outcomes (in part or whole).
- Next, we'll take a bottom-up approach and build projects to address sets of features within one or more platforms (used to build products)

Aligning Outcomes w/ Requirements

- ❑ **Requirements can be mapped to outcomes at any level of granularity (based on the formality of the requirements methodology):**
 - Outcomes can be mapped to one or more job steps
 - A process (& it's steps) can be mapped to a use case
 - A business rule is mapped to one or more use cases
 - A functional feature is mapped to one or more use cases
 - A non-functional feature is mapped to one or more functional features

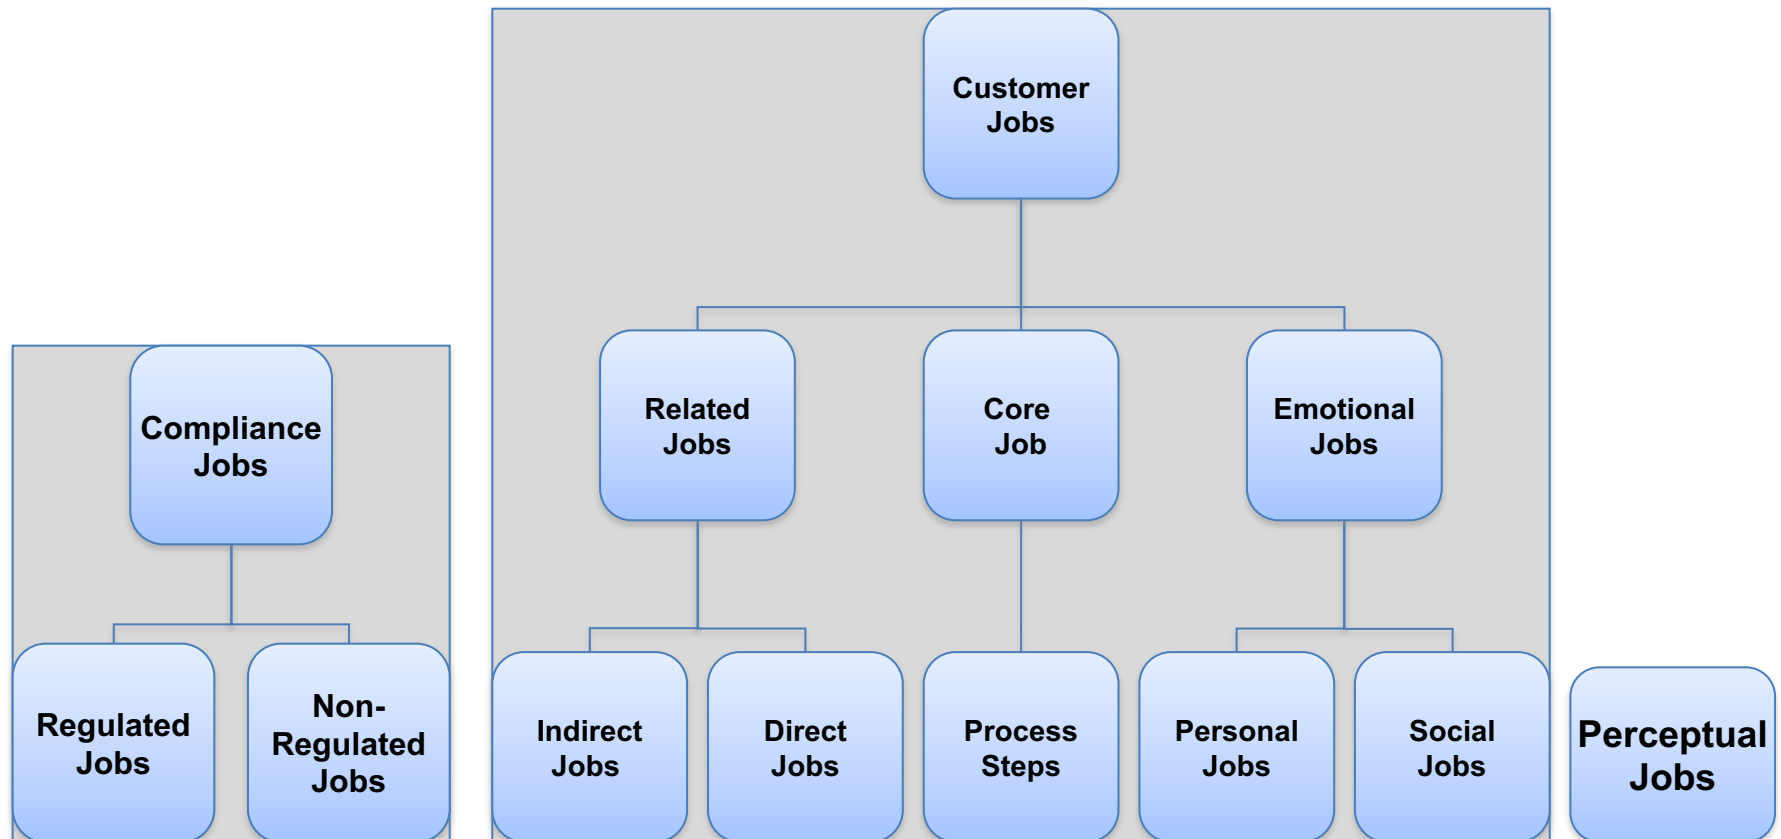

- ❑ **Reuse can occur on multiple levels.**

Aligning Features & Outcomes w/ Platforms

A prioritized list (subset) of outcomes are used to update one or more value platforms for one or more markets

The features (and sub-features), which are mapped to the list of outcomes are used to update the designs for one or more technology platforms

Job Reference Model for Healthcare

Details on Job Model Extensions

❑ Compliance Jobs

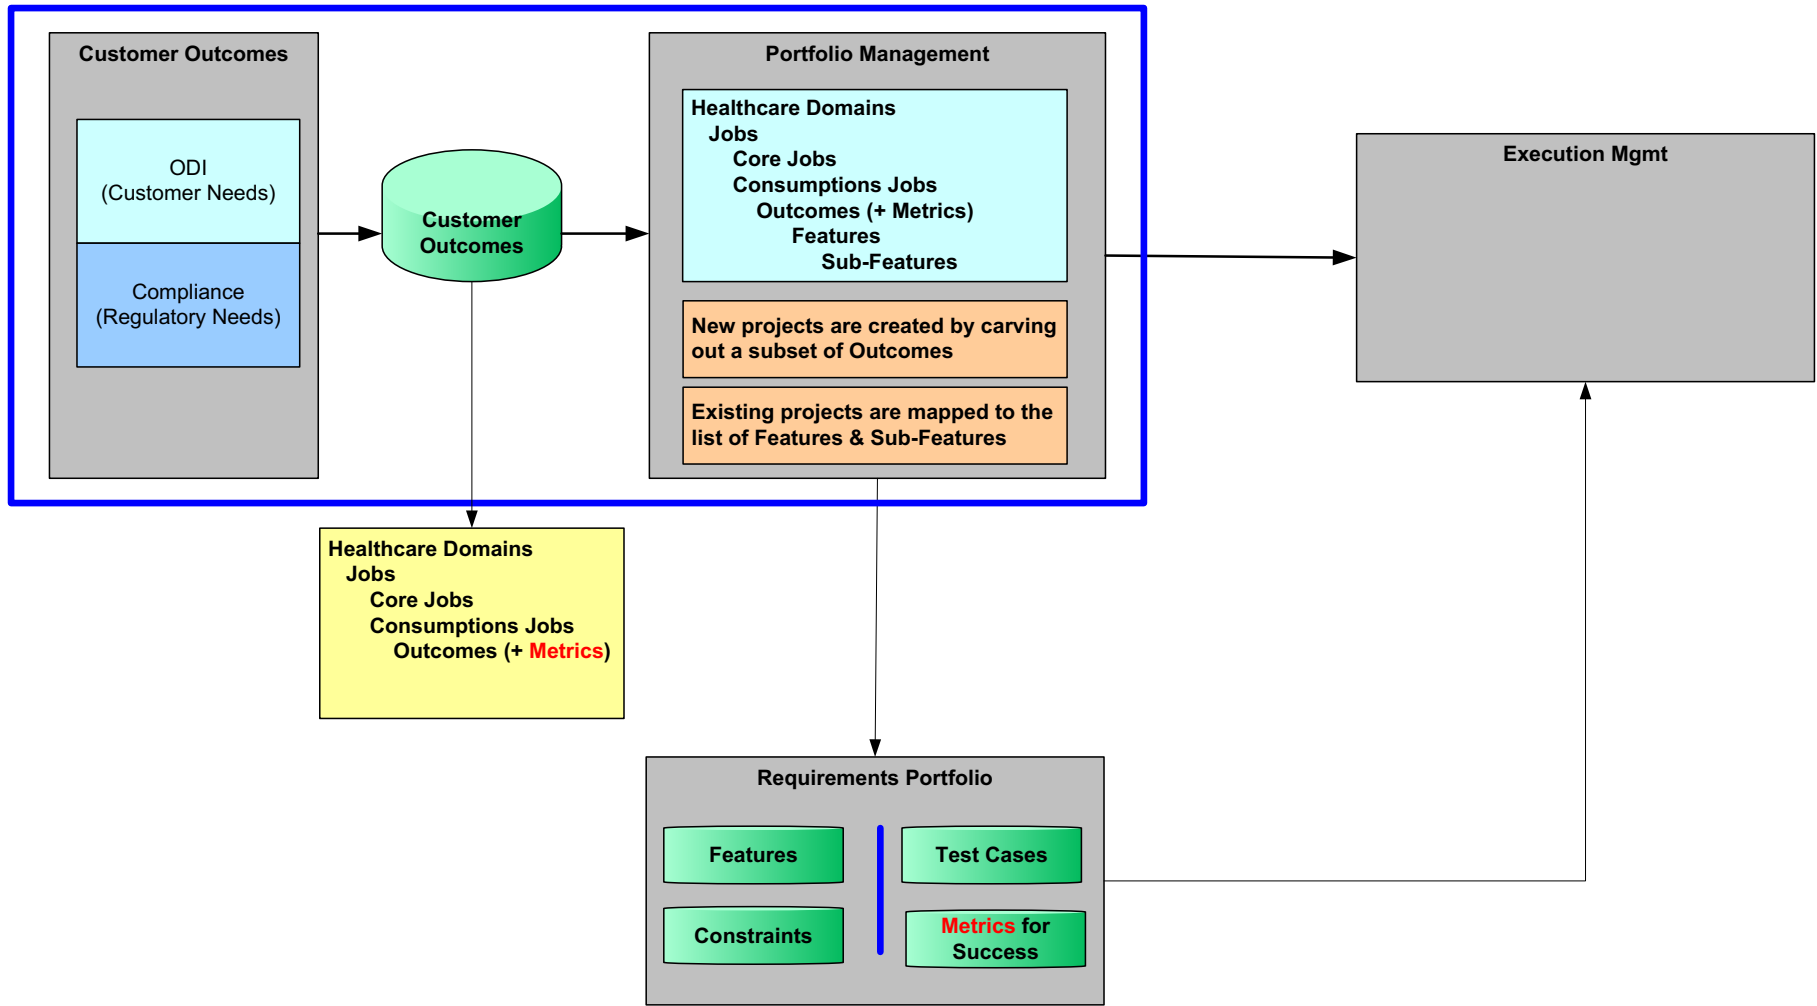

- Represent a key input for every company. The problem is that every company spends significant resources trying to interpret & apply the regulatory statutes. Some companies use a more conservative approach and others appear more agile.
- Regulated Jobs include those covered in municipal, regional (state, providence), and governmental. Each one representing a different market.
- Non-Regulated Jobs include those processes and policies established by the company as part of internally created governance and oversight committees.

Details on Job Model Extensions

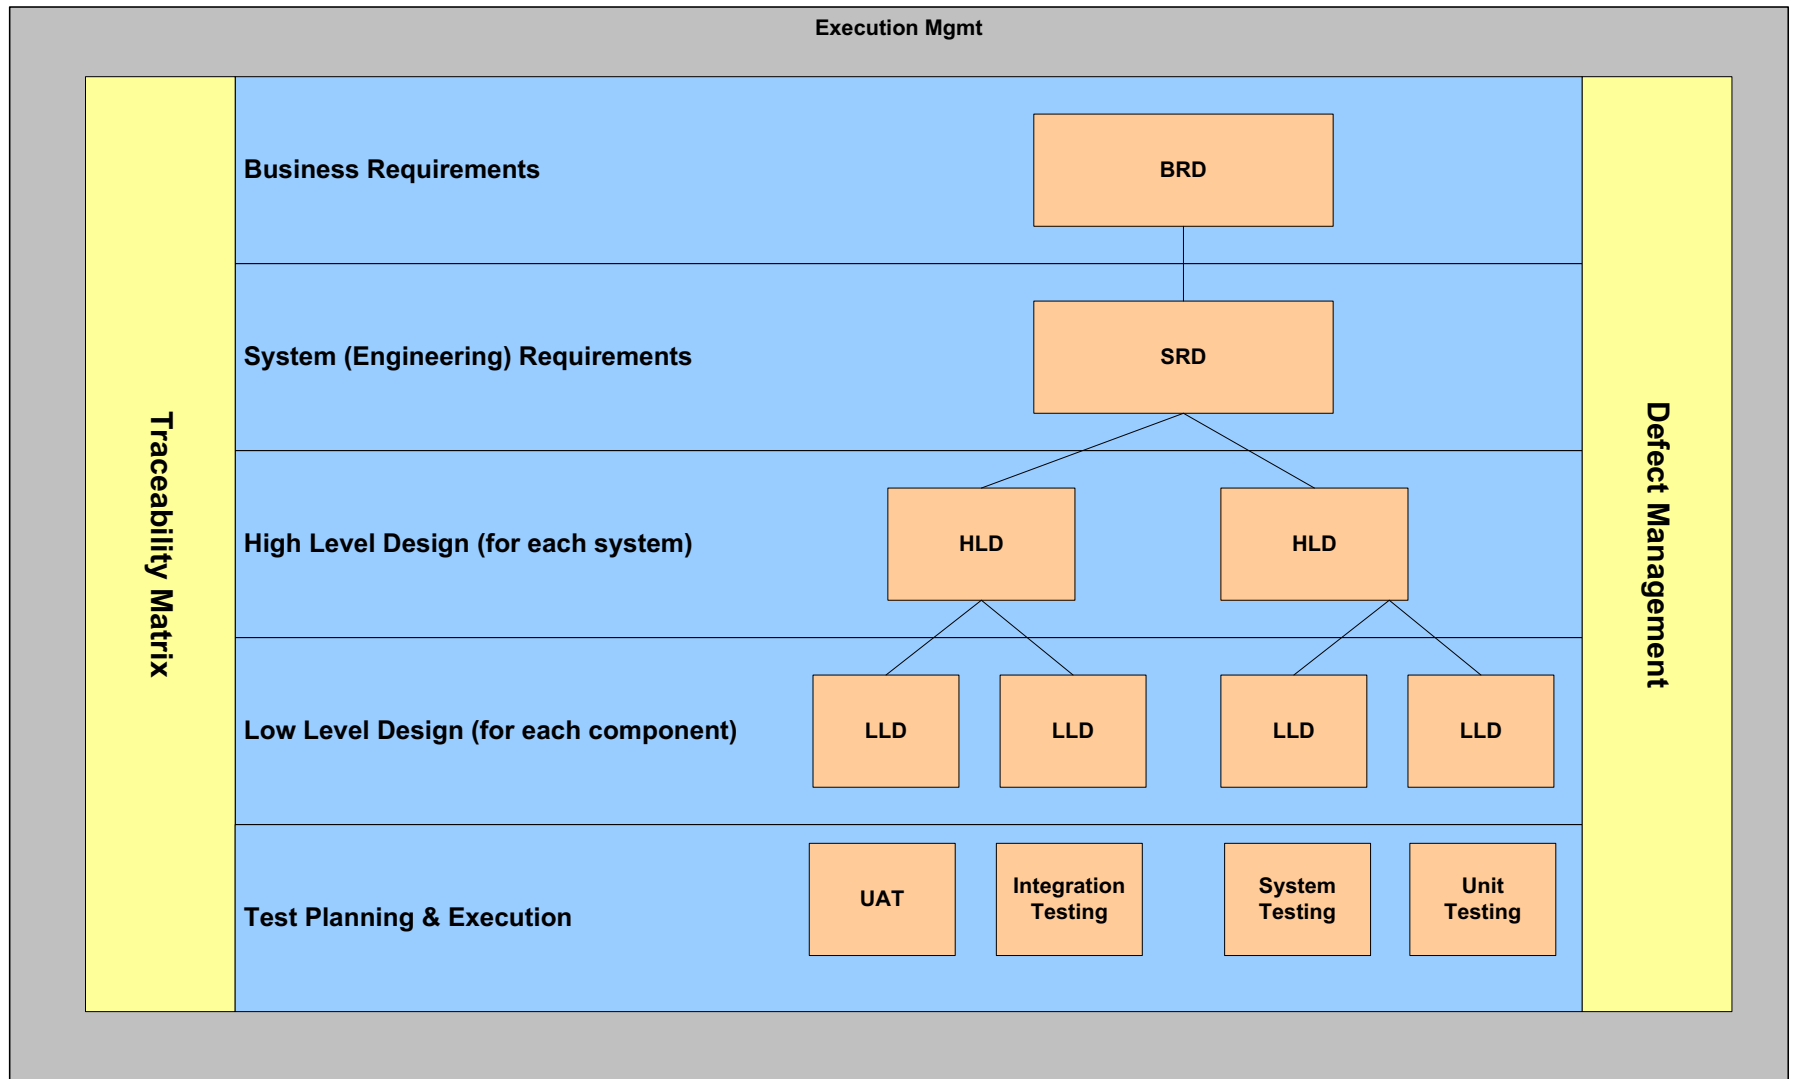

❑ Perceptual Jobs

- These are an extension of the functional services (esp. in healthcare) where delivering consideration, compassion and empathy all play more important roles for a patient than functional competencies in achieving customer satisfaction.
- Drafting scripts, defining and building experiences, and building behaviors that evolve into habits to engage employees as well as customers.

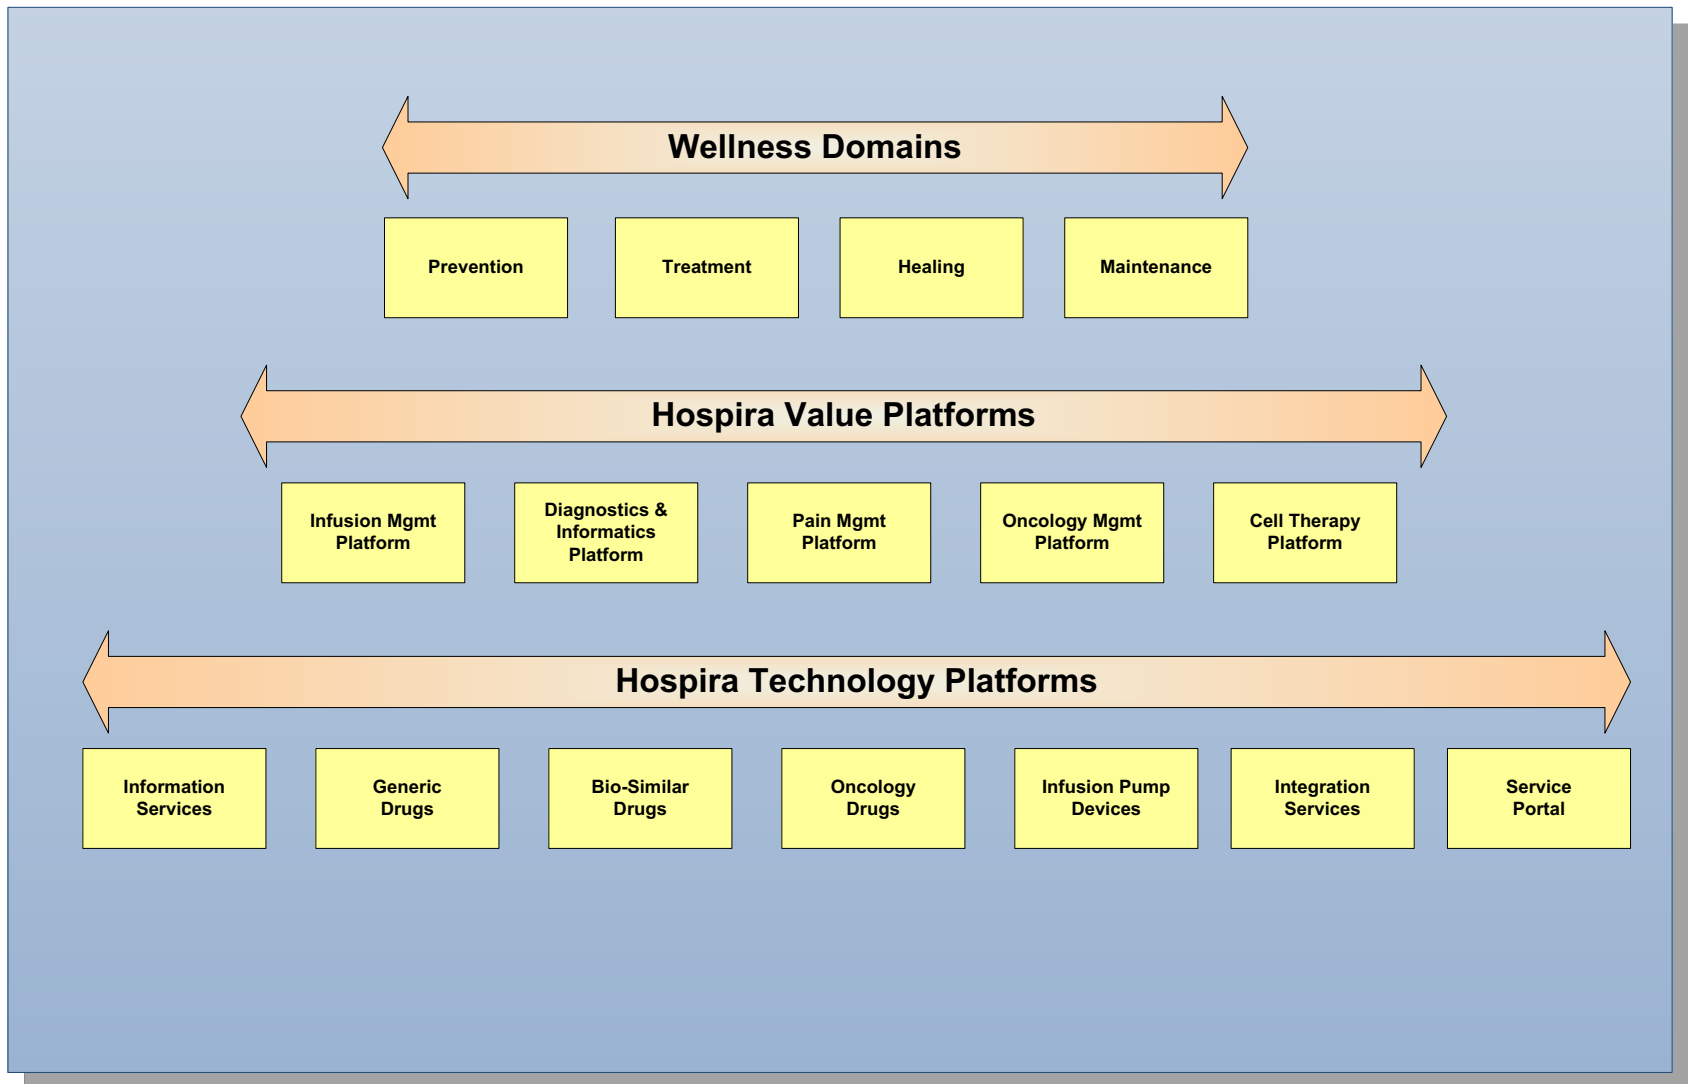

What is the impact on portfolio management ?

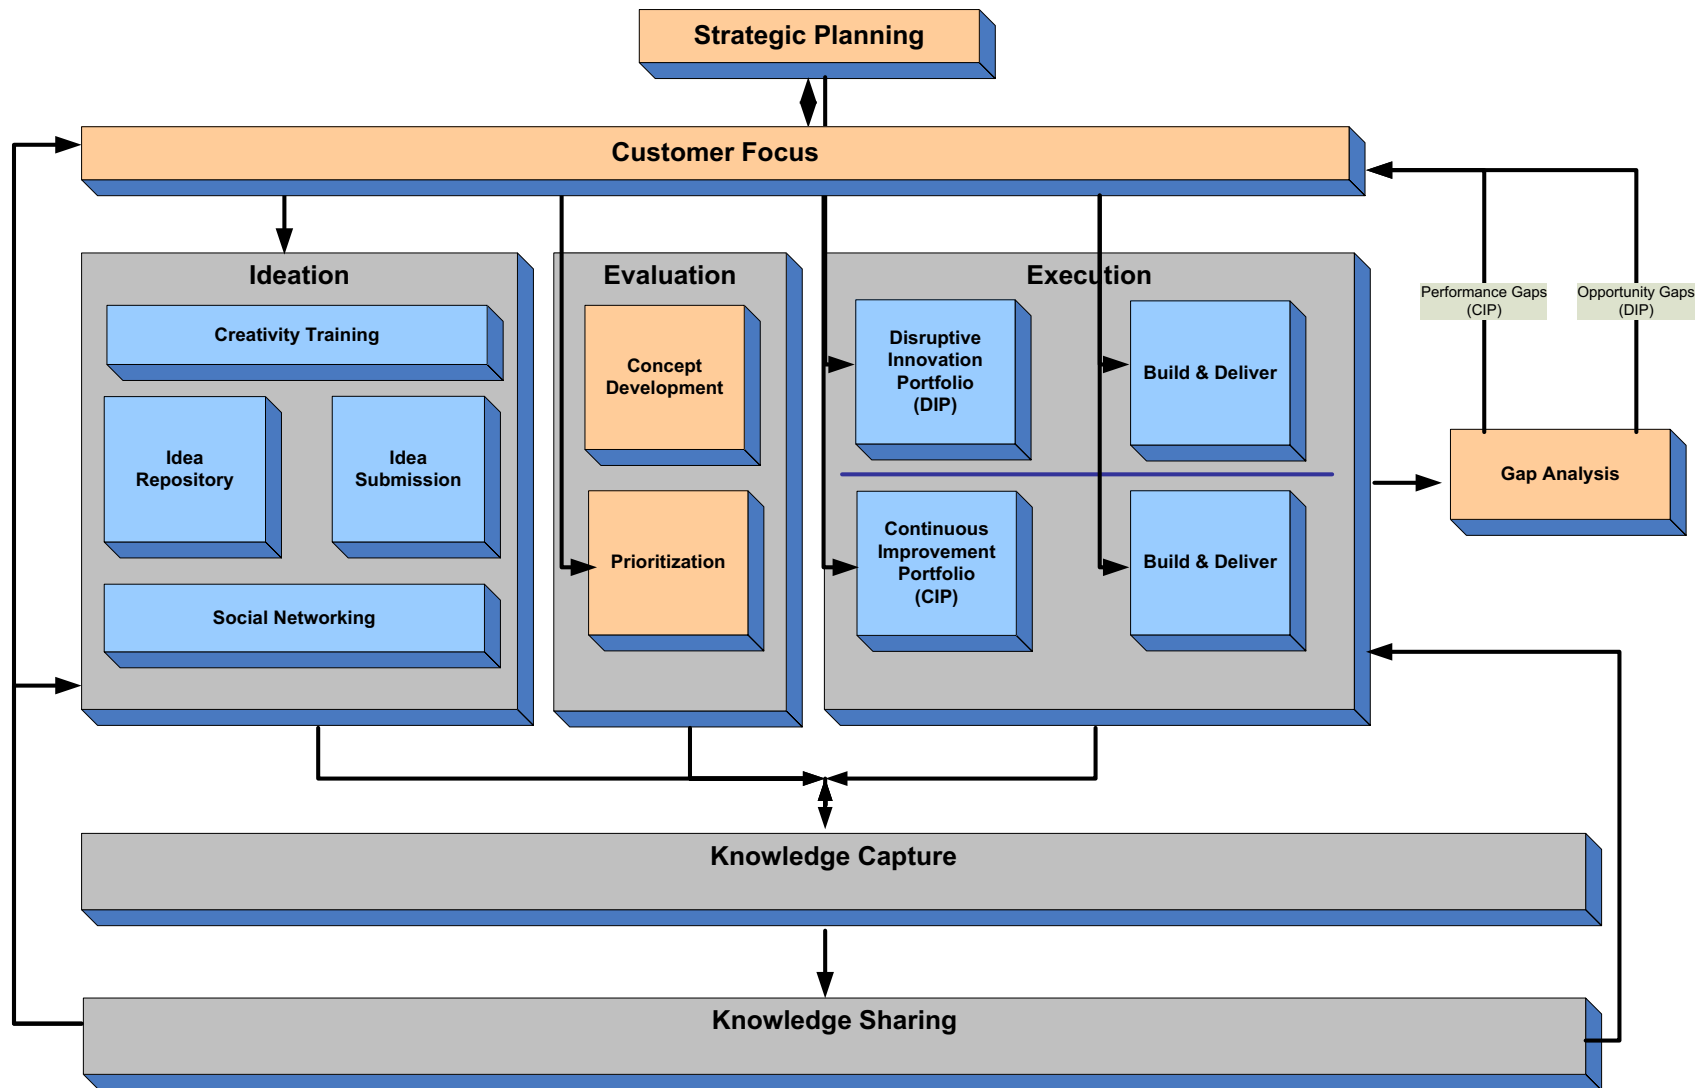

How does this dovetail into Execution ?

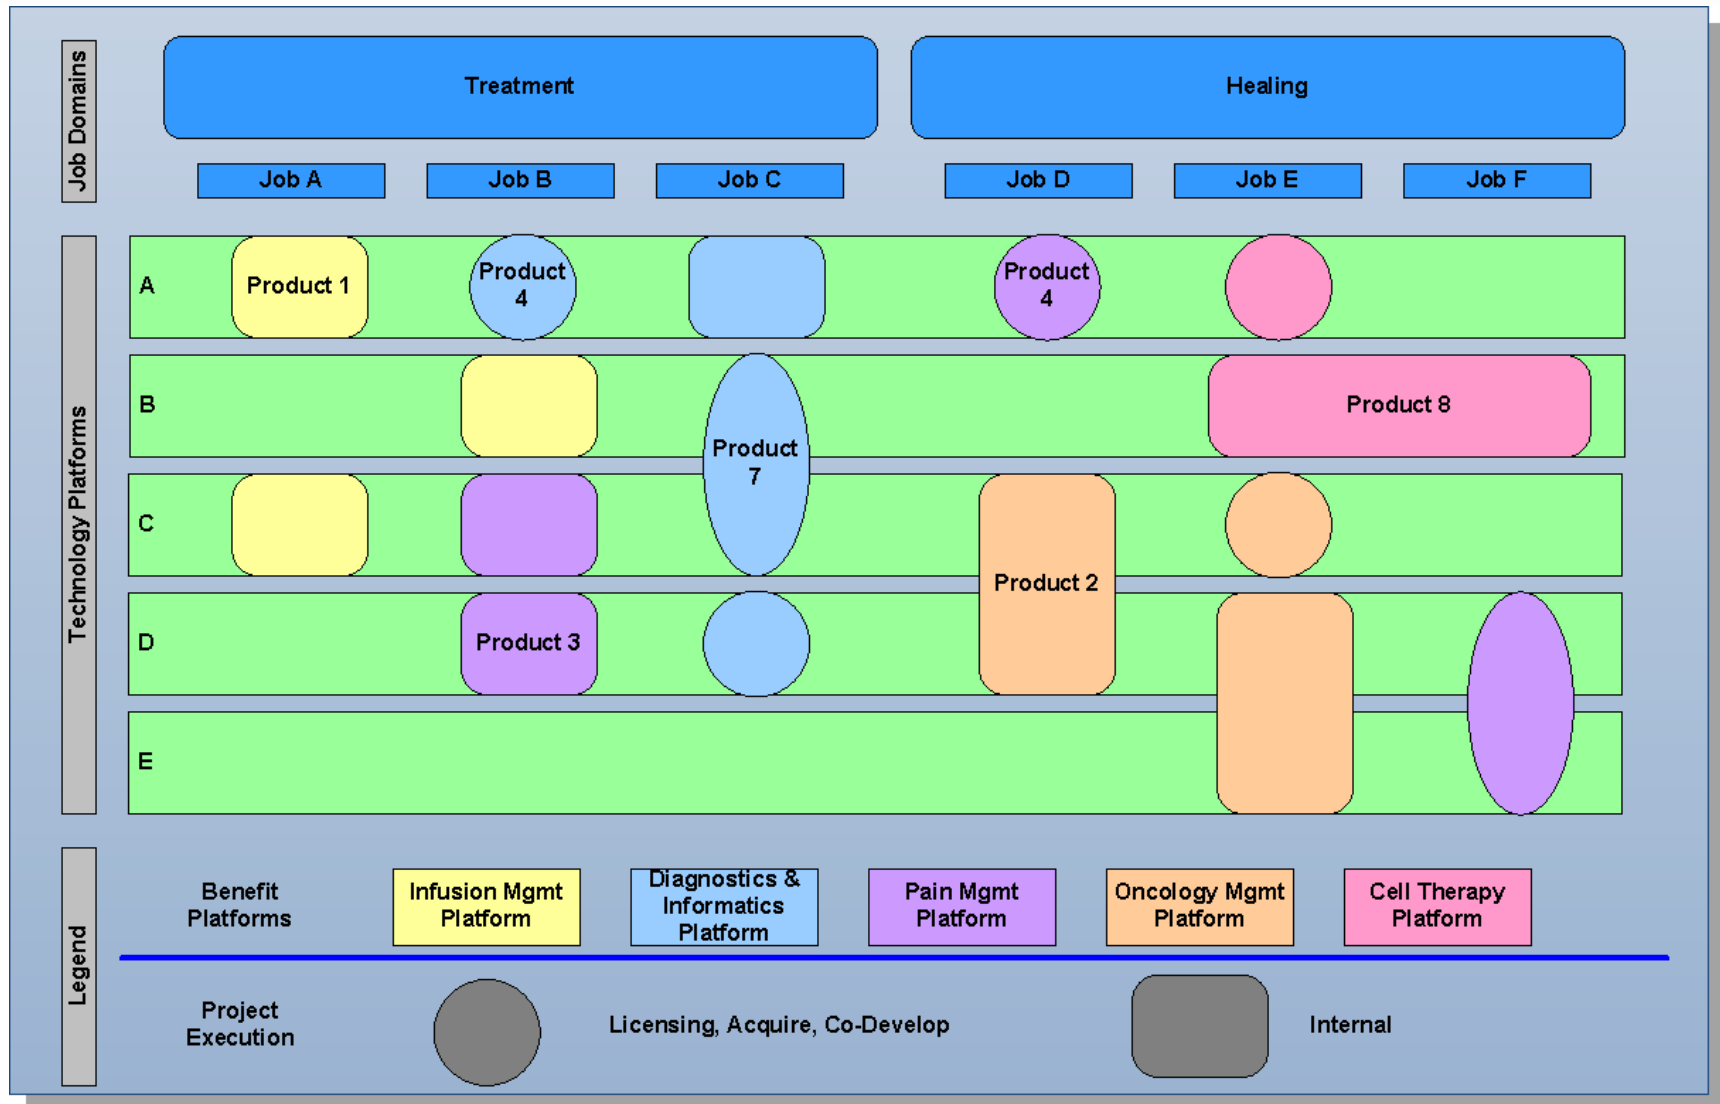

A platform view can help us with this shift

Positioning ODI in the innovation pipeline

Portfolio Model (Example for Pharma)

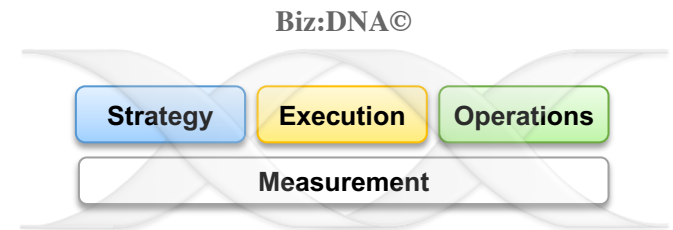

Next Steps

- Obtain support from the Executive Support
- Draft proposal and obtain feedback
- Share with the Customer Focus Team
- Present to Innovation Center steering committee
- Obtain approval to obtain funding
- Plan and execute transformation

Thank You

Measure what matters
Create and deliver the right value
Build and nurture a winning culture
Proactively manage change & complexity
